Sanghvi Movers Ltd

Concall Tracker · ticker SANGHVIMOV (NSE) / 530073 (BSE) · report date 4 July 2026

What the business does: Sanghvi Movers is India's (and Asia's) largest crane-rental company — it owns a fleet of very large mobile cranes and hires them out, with operators, to lift and place heavy equipment at project sites: wind turbines, cement kilns, steel and refinery vessels, power plants, metros and bridges. Customers pay a monthly rent per crane. Over the last two years it has bolted on two newer engines: a wind "EPC" business (through subsidiary Sangreen Future Renewables — EPC means engineering, procurement & construction, i.e. erecting and commissioning whole wind farms rather than just supplying the crane), and an overseas crane-rental push into Saudi Arabia, Qatar and Botswana.

1. Snapshot

₹1,070 cr

FY26 revenue — total sales for the year, up ~37% from ₹782 cr in FY25

₹184 cr

FY26 net profit — the final bottom-line earnings, up ~18% from ₹157 cr

40.1%

FY26 operating (EBITDA) margin — profit before interest, tax & depreciation as a share of sales; slipping from ~42% (FY25) and ~56% (FY23)

79%

FY26 fleet utilization — share of cranes that were out on hire on average; up from 74% in FY25

₹612 cr

FY26 net debt — borrowings minus cash; net debt-to-equity 0.47x, still a comfortable, low-leverage balance sheet

17% / 47.25%

FY26 return on capital employed (how hard the capital works) / promoter (founder-family) holding, unchanged for years

Other reads: FY26 free cash flow was **negative ~₹98 cr** (cash from operations minus capex) — the company is spending more on new cranes than it generates, funding growth with some debt. Operating cash flow itself was healthy at ₹278 cr. Quarterly net profit through FY26 ran ₹50 cr → ₹36 cr → ₹29 cr → ₹69 cr (Q1→Q4), the dip mid-year being a normal monsoon-season lull plus a one-off ₹8.4 cr charge in Q3. Market capitalisation was not included in the provided snapshot data.

2. Concall coverage

Only the four most recent transcripts (FY26) were available; the multi-year consistency read is therefore limited and supplemented with a web deep-dive for earlier years. The calls read span one financial year (April 2025 – March 2026). For FY24–FY25 background (prior order book, past guidance, wind-sector cyclicality) we used credible web sources, cited below.

Quarter	Call date	Transcript read?
Q1 FY26 (Apr–Jun 2025)	8 Aug 2025	Yes — full
Q2 FY26 (Jul–Sep 2025)	10 Nov 2025	Yes — full
Q3 FY26 (Oct–Dec 2025)	9 Feb 2026	Yes — full
Q4 FY26 (Jan–Mar 2026)	22 May 2026	Yes — full (latest)

Web sources for earlier-year context: Screener.in company page; Mangal Keshav fundamental report (Dec 2025); Envest360 note; AlphaStreet Q4 FY24 call summary; Trade Brains / Investing.com order-win news. Key facts drawn: FY24 order book ~₹426 cr; wind-EPC grew from ~5% of revenue (FY24, ~₹30 cr) to ~34% (FY25, ~₹200–250 cr); historical EBITDA margin fell from ~63% (pure crane) to ~45% as the lower-margin wind-EPC mix rose; company has erected 17+ GW of wind turbines (~15,000 turbines) with ~50–60% share of the wind-crane market.

★ Latest concall highlights — Q4 FY26 (May 2026)

- **Strongest quarter on record.** Q4 revenue ₹351 cr (up 31% year-on-year); full-year FY26 revenue ₹1,070 cr (up 37%) — the company crossed the ₹1,000 cr mark for the first time. Q4 net profit ₹69 cr; full-year ₹184 cr (up 18%).
- **Growth target held for FY27.** Management said it aims to repeat "~30% growth" in consolidated revenue next year, with the core crane-rental business itself targeted to grow ~30% — a rare explicit guidance from a team that usually declines to give one.
- **Saudi turning the corner.** The Saudi (KSA) crane business started making a monthly operating profit and expects to be cumulatively profitable by the first half of FY27; utilization there is 85–90% at a yield above 4.5%/month (roughly double India's ~2.1%). But West Asia conflict and Jeddah port congestion are delaying new-crane shipments and could push capex out.
- **Order book & pipeline healthy.** Order book ₹1,053 cr (as of mid-May 2026, all executable this year); the "inquiry pipeline" (potential orders being discussed) has swelled to ~₹4,000 cr. India added a record 6.1 GW of wind capacity in FY26 (+46%), of which Sanghvi handled ~2 GW.
- **Tone:** confident and expansion-minded; frames FY26 as an "investment year" with margins compressed by the mix shift and overseas build-out, and points to operating leverage from FY27.

Business mix & capacity (quick-glance)

- **Revenue by business (FY26):** crane rental ~65% · renewables / wind-EPC ~31% · project EPC ~4%. Plain read: two-thirds is still the traditional high-margin crane-hire business, roughly a third is the newer, lower-margin wind-farm build-out work.
- **Wind vs non-wind (within crane hire):** roughly **50% wind / 50% other sectors** (cement, steel, refinery, power, metros) — stated in Q1 FY26; management then *stopped disclosing* the sectoral split, calling it competitive information.
- **Domestic vs overseas:** still **overwhelmingly India (domestic)**. The Saudi/Qatar business only began billing in September 2025 and remains small; management does not break out an exact domestic/export percentage. KSA fleet is 30+ cranes and rising.
- **Capacity utilization:** FY26 averaged **79%** (up from 74% in FY25), within a stated long-term band of 75–80%; Q4 hit 87%. Plain read: cranes are working hard, with only modest headroom — hence the large new-crane capex. KSA runs at 85–90%.
- **Fleet & assets:** ~485 cranes; gross block ~₹3,100 cr. India yield ~2.12%/month (monthly rent as % of a crane's purchase cost).

3. Earning Trigger thesis

The core money-maker — and the most durable trigger — is **crane-rental demand from India's infrastructure and energy capex boom.** Sanghvi rents the heavy cranes that erect wind turbines, cement and steel plants, refineries, thermal and (newly) nuclear power, metros and bridges. Management says every one of these sectors is expanding, wind especially (a record 6.1 GW added in FY26, target 100 GW by 2030), and that this let the *core crane business grow ~30% in FY26* and should do so again in FY27. Layered on top are two "second engines": a fast-growing, asset-light **wind-EPC** arm (Sangreen) that doubled revenue and earns very high return on capital (~70%) despite thin EBITDA margins, and a **Saudi/GCC crane-rental** expansion at markedly higher day-rates. The order book (₹1,053 cr) and a ~₹4,000 cr inquiry pipeline give near-term visibility.

Trigger	What management said	Evidence so far	Horizon	Strength
India crane-rental demand (wind + cement/steel/refinery/power)	Core crane business can grow ~30% a year on India's capex cycle	FY26 revenue +37%, utilization 74%→79%, order book & pipeline at records; real 6.1 GW wind added	Now – 3+ yrs	Strong concrete, delivering, backed by sector data
Wind-EPC (Sangreen)	Asset-light, high-ROCE second engine; margins 10–12%	Revenue doubled FY25→FY26; ~31% of FY26 sales; but quarterly revenue lumpy and flattish recently	Now – 3 yrs	Moderate real growth but lumpy, low-margin, execution-limited
Saudi / GCC expansion	Top-3 crane player in KSA in 5 yrs; higher yields; breakeven 12–14 months	Positive monthly EBITDA in Q4 FY26; 85–90% utilization; but still small, cash-consuming, and now hit by shipping delays / regional conflict	2 – 5 yrs	Moderate promising, early, unproven at scale

4. Management Consistency scorecard

Period	What was promised / said	What actually happened	Verdict
FY26 (set in Q4 FY25 call)	Full-year revenue growth of 25–30%	Delivered +36.9% — beat the guidance	**Delivered**
Q1→Q4 FY26	Utilization to stay in the 75–80% band	FY26 averaged 79%; Q2 monsoon dip to 70% recovered to 87% in Q4	**Delivered**
FY26	Capex plan for new cranes: ₹246 cr → raised to ₹321 cr → ₹629/639 cr	Only ~₹474 cr actually spent; balance carried into FY27 (OEM/shipping delays)	**Partly**
Q1→Q4 FY26	Wind-EPC EBITDA margin ~10–12%; blended margin to normalise later	Wind-EPC held ~10–12%; blended margin still drifted down (mix + Saudi build-out)	**Partly**
Q1→Q4 FY26	Saudi to break even ~12–14 months from launch	On track — positive monthly EBITDA by Q4; cumulative breakeven expected H1 FY27	**Too-early**
Q1 FY26 onward	Used to disclose sector split and crane-vs-EPC order-book split	Stopped both from Q1 FY26 ("Board-directed, competitive") — reduced transparency	**Dropped**
FY26 wind-EPC (web: prior years)	Wind-EPC to scale from ~5% (FY24) toward a bigger share	Reached ~31–34% of revenue — scaled as claimed, though margins fell as expected	**Delivered**

Narrative drift: The story has evolved quickly — from a "pure-play crane rental company" (FY24) to a "group of companies" (Q1 FY26) to a "multi-country infrastructure service platform" under a new 6-pillar "Elevate 2030" vision (Q2–Q4 FY26). The direction is coherent (everything still centres on heavy lifting), and the headline promise — strong double-digit growth — has been met. But three things temper the read: (1) a large, fast-changing **management team** — the long-serving CFO and Company Secretary left in Q1, a whole new C-suite (CEO, CFO, and new CBO/CSO) was hired, and the founder MD was *absent from the Q3 call*; (2) **reduced disclosure** (sector and segment splits withdrawn) just as the business grew more complex; and (3) **margin compression and negative free cash flow** during an aggressive, debt-part-funded expansion. Tone throughout is confident, occasionally defensive when pushed on segment detail.

5. Bottom line — two verdicts

Durable earning trigger? → YES

The main driver is concrete, still live, and visibly playing out. The core crane-rental business grew ~30% in FY26 on genuine, broad-based demand — a record 6.1 GW of wind installed, plus cement, steel, refinery, thermal and emerging nuclear capex — and it sits behind a record order book (₹1,053 cr) and a ~₹4,000 cr inquiry pipeline. Sanghvi's dominant fleet (~485 cranes, 50–60% wind-crane share) is a hard-to-replicate moat. The two add-on engines (wind-EPC and Saudi) add optionality. This is a real trigger with evidence behind it, not a hope.

Management consistent? → MAYBE

Management delivered on the numbers that matter most — it beat its own 25–30% growth guidance, hit its utilization band, and scaled wind-EPC and Saudi roughly as promised. That earns real credit. But the read is only "maybe" because the same period brought heavy management churn (new CFO/CS/CEO and a founder MD absent from one call), a deliberate *reduction* in disclosure (sector and order-book splits withdrawn), capex plans that were raised sharply then under-spent, and falling margins with negative free cash flow. With only four quarters of transcripts to judge, the multi-year track record cannot be fully verified here; the story is evolving fast and deserves close watching before the "maybe" becomes a "yes".

Prepared from Sanghvi Movers' Q1–Q4 FY26 earnings-call transcripts and Screener snapshot financials, supplemented by public web sources for FY24–FY25 context. Figures rounded; "cr" = crore (10 million). This is an educational summary of what management said versus what the numbers show — not investment advice.
