TTK Prestige Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: TTKPRESTIG · BSE: 517506 · Report prepared 20 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of 16 earnings-call transcripts spanning Nov 2021 to Jul 2026, plus the company's financial filings.

1 Snapshot

What the business does: TTK Prestige is India's best-known **kitchen products** company — pressure cookers, non-stick pans and cookware, gas stoves, mixer-grinders and small kitchen appliances, sold under the *Prestige* brand and the value brand *Judge*. It makes money by manufacturing and selling through a very wide retail and online network. Pressure cookers and cookware are its heartland; appliances are the growth end. It has no meaningful debt and a large pile of spare cash.

Measure	Value	What it means in plain words
Market cap	₹8,152 cr	What the whole company is worth on the stock market — a mid-cap.
FY26 revenue	₹2,773 cr	Total sales in the year to March 2026, up 9.6% — **the best growth in four years**.
FY26 net profit	₹185 cr	Profit after all costs and tax, up 14%. But still 37% below the ₹294 cr it earned in FY22 .
FY26 operating margin	11%	11 paise of operating profit per rupee of sales — down from 16% in FY22. **This is the whole story.**
Q1 FY27 revenue	₹771 cr	Up 34% on a year earlier — and unusually, almost all of it volume, not price.
Free cash	~₹870 cr	Spare cash after all investment — over a tenth of the company's market value sitting idle.
Return on capital (FY26)	13.7%	What the business earns on the money employed in it. Modest for a branded consumer company.
Dividend yield	1.26%	The annual dividend as a share of the price — it pays shareholders while it rebuilds.

2 Concall coverage

Period covered	Calls read	Transcript read?
Q2 FY22 → Q3 FY26	15 calls	Yes — read for the promised-versus-delivered thread
Q4 FY26 / full year FY26	25 May 2026	Yes — full read
Q1 FY27	**28 Jul 2026**	**Yes — newly deep-read in full ★**

Coverage note. 16 transcripts spanning **almost five years**, including the latest Q1 FY27 call — the strongest coverage of any company in this batch. Screener lists 26 calls; the 10 not read are all from 2019–2021 (the company moved those files off its website) plus two with no transcript posted. Nothing material to the current thesis is missing. Note that TTK's transcripts sit on the company's own domain, whose security certificate is misconfigured — the files are only reachable with a relaxed fetch, which is why a naive scrape of this company returns almost nothing.

★ Latest concall highlights — Q1 FY27 (call held 28 Jul 2026)

- **The best quarter in years. Revenue ₹771 cr, up 34%** on ₹575 cr. Operating profit ₹87 cr, **up 78%**. Net profit ₹66 cr against ₹35 cr, **up 89%** — profit grew far faster than sales, which is the opposite of the last four years.
- **And it is real volume, not price rises.** The CFO was asked exactly this and answered plainly: of the 34% growth, "only around 3% is actually the price hike, the rest for all the volume growth" — and broad-based "across all the categories". For a company whose volumes had been flat for four years, this is the single most important number on the call.

- **Costs are rising and being passed on.** Raw-material inflation is running at ~8%; price increases of 5–8% have been taken but landed only at the very end of the quarter, so most of their benefit is still to come. Margin at 11.3% was achieved *before* those price rises took effect.
- **Management deliberately talked down its own result.** Venkatesh V, the CEO: "while we do believe that this is not a sustainable consistent demand, the demand would probably settle at a slightly higher level than before". An analyst pressed on whether one-off drivers (LPG supply issues lifting induction cooktops) flattered the quarter. Management did not claim otherwise.
- **The ₹500 cr transformation programme is running late.** Announced a year ago over three years; as of this call **only one-third has been spent**, with ₹300 cr+ still to go over the next two years. Cash is not the constraint — there is ₹870 cr free.
- **Tone: confident on execution, cautious on the environment.** Repeated, specific claims of market-share gains "in very targeted segments"; explicit refusal to give numeric guidance, as in every call for the last three years.

Business mix & capacity. Overwhelmingly domestic. Exports are **not quantified** by management and were described this quarter only as "a little muted" on supply-chain disruption — so treat exports as a small, non-material share of sales; the company lives or dies on Indian kitchen demand. Q4 FY26 domestic growth was 14.4%. Category mix: cookers, cookware and appliances all grew in Q1 FY27, with appliances "a little bit of a muted growth" and value-added products selling better. **Capacity utilisation is not disclosed** — an analyst asked for it directly on the Q4 FY26 call and no figure was given. Management does say demand was met "very efficiently", implying no capacity constraint.

★ 3. Earning-trigger thesis

The driver is a **margin-recovery story, not a growth story**. TTK's sales have been broadly flat for five years (₹2,532 cr in FY22 to ₹2,773 cr in FY26) while operating margin collapsed from 16% to 10% and profit fell 37%. Management is spending **₹500 crore over three years** on process, product, supply-chain and brand transformation, funded entirely from internal cash, with one stated goal: **get the operating margin back to "around 13%, 14%"**. That is the only hard number this management has committed to. If it lands on today's ₹2,800–3,000 cr of sales, profit rises by roughly half without needing any heroic growth. Q1 FY27 is the first quarter that looks like the plan working — volume-led growth of 34%, margin up to 11.3%, and cost initiatives management says are "starting to yield results".

Trigger	What management said	Evidence so far	Horizon	Strength
Margin back to 13–14%	After the investment phase, "we should get back to our earlier margin of around 13%, 14%. That's our target."	10% (FY25) → 11% (FY26) → 11.3% (Q1 FY27). Moving the right way, and price rises taken late in Q1 have not yet shown up. Still 2–3 points short.	2–3 years	**Moderate** **Trending correctly, unproven at the target.**
₹500 cr transformation programme	₹500 cr over 3 years from Q4 FY25 across process, product, supply chain and brand.	Real and self-funded, but **only one-third spent in ~1.5 years**. Management attributes the Q1 demand fulfilment to "work done over the last two years".	Now → FY28	**Moderate** **Genuine and funded; pace is behind schedule.**
Volume recovery & market share	Will "grow faster than the market and continue to gain market share"; share gains in targeted segments.	**Strongest evidence in the pack.** Q1 FY27 growth was ~31% volume and only ~3% price, across all categories. FY26 revenue growth 9.6%, best in four years.	Now	**Strong** **Verified by the price/volume split management itself gave.**
Premiumisation & kitchen "smartification"	Appliances and value-added products to carry the mix upward; *Judge* brand to address Tier-2/3.	Value-added products "getting sold better" in Q1 and cited as part of the growth. Appliances growth was the *weakest* of the	3–5 years	**Moderate** **Directionally live, but appliances lagged.**

		categories this quarter, which cuts against the thesis.		
₹870 cr idle cash	"In these days, this is better to keep some cash free with us."	Real, and it de-risks the whole programme. But it earns little, and it is a large part of why return on equity is only 10.2%.	Ongoing	**Moderate** **A safety net, not an earnings engine — and a drag on returns.**

4 Management consistency scorecard

Read this first. This management **refuses to give numeric guidance**, repeatedly and explicitly ("We don't want to give any guidance in this regard", "that is again the guidance. We will not be able to give that out"). That makes for a short promise list — which cuts both ways: there is less to hold them to, but also far less to catch them out on.

Period	What was promised / stated	What actually happened	Verdict
Q4 FY25 (May 2025)	Margins would be "a little diluted" by the ₹500 cr investment phase — an explicit warning, not a promise of improvement.	Accurate. FY26 operating margin came in at 11% against 10% — held roughly flat through the spending, exactly as characterised. **They set a low bar honestly and cleared it.**	**Delivered**
Q4 FY25	₹500 cr outlay over 3 years, starting Q4 FY25.	One-third spent by Jul 2026, ~18 months in. Behind a straight-line pace, and disclosed plainly when asked rather than glossed.	Partly
FY26 (May 2026)	Return to "around 13%, 14%" operating margin after the investments.	11% in FY26, 11.3% in Q1 FY27. Moving toward it. The clock has 2 more years to run on their own timeline.	Too early
FY26 (May 2026)	FY26 profit after tax "around ₹185 crores, a growth of 14%... a good robust year".	Confirmed by the filings — ₹185 cr, +14%. Characterisation matched the numbers.	**Delivered**
Q1 FY27 (Jul 2026)	Demand surge is "**not** a sustainable consistent demand"; will settle "at a slightly higher level than before".	Too early to test — but note the direction of the bias. Management chose to **temper expectations after its best quarter in years**, having been asked whether one-offs helped. That is the opposite of the pattern seen elsewhere in this batch.	Too early
FY22 → FY26 (the long view)	No growth or margin targets were ever given for this period.	Sales flat (₹2,532 cr → ₹2,773 cr), profit down 37%, margin 16% → 11%. **A poor five years of execution** — but not a broken promise, because no promise was made.	**Weak record**

Narrative drift. Almost none, and that is the finding. The story has been the same for three years — the market is soft, we are investing ₹500 cr in the guts of the business, margins will dip before they recover, we will not give you a number. Tone has been consistently measured, and in Q1 FY27 actively self-deprecating about a 34% growth quarter. The gap here is not honesty, it is **performance**: five flat years and a 37% profit decline are a weak record however candidly narrated, and the transformation spend is running a third behind its own schedule. A reader should trust what this management says and question how fast it can execute — the exact inverse of the usual problem.

5 Bottom line

Durable earning trigger? → MAYBE

The trigger is specific and measurable — restore operating margin from 11% to 13–14% on a ₹2,800 cr-plus revenue base, which would lift profit by roughly half with no growth heroics — and Q1 FY27 is the first hard evidence it is working: **31% volume growth against 3% price**, margin at 11.3% before the latest price rises even landed, and market-share gains management describes in specific segments. What stops this being a YES is that the target is still two to three points away, the ₹500 cr programme is a third behind schedule, and management itself says the demand that produced this quarter will not persist at this level. One outstanding quarter after four poor years is a turn, not yet a trend.

Management consistent? → YES

Judged on what this section actually measures — did they do what they said — the answer is clearly yes. They warned margins would dilute during the investment phase and margins held roughly flat, as described. They reported FY26 exactly as the filings show. They disclosed the capex underspend plainly when asked rather than burying it. And after a quarter with 34% revenue and 89% profit growth, they volunteered that the demand was not sustainable and declined to claim credit — then gave the precise price-versus-volume split that let an outsider verify the quality of the growth. This is a management that under-promises and reports straight. The serious criticism of TTK Prestige is its **five-year operating record** — flat sales, margin down five points, profit down 37% — not its candour, and the two should not be confused.
