Jeena Sikho Lifecare Ltd

Concall-Tracker report · Screener ticker JSLL (NSE: JSLL, BSE: 544476) · "Shuddhi" Ayurveda · 8 earnings-call transcripts read (FY24 → Q1 FY27) · prepared 31 Aug 2026

1. Snapshot

What the business does (one line): Jeena Sikho runs an **Ayurveda healthcare ecosystem** — hospitals and clinics offering Panchakarma and Ayurvedic treatment, out-patient consultations, health camps, and its own range of Ayurvedic medicines sold to the same patients afterwards. In plain terms: it treats people using traditional Indian medicine and then keeps selling them products, so one patient becomes two revenue streams.

Figure	Value	Plain-English read
Market capitalisation	**₹6,359 cr** (price ₹511)	What the whole company is worth. Note the 52-week range is **₹492–850** — the share sits close to its *low*, roughly 40% below the high, despite the growth below. The market is plainly sceptical.
Price-to-earnings	**26.9×**; dividend yield 0.22%	About 27 times last year's profit.
Q1 FY27 revenue (Jun'26 qtr)	**₹224 cr, up 29% YoY**	Against ₹174 cr a year earlier. But look sequentially: ₹222 cr, ₹216 cr, ₹224 cr across the last three quarters — **essentially flat for nine months**.
Q1 FY27 operating profit	**₹92 cr, margin 41%**	A 41% operating margin. For context, India's large listed hospital chains typically earn 15–25%. This is the single most striking number in the company and the one that most deserves scrutiny.
Q1 FY27 net profit	**₹65–66 cr, margin 28%**	Up 29% year-on-year. Earnings per share ₹5.28 for the quarter.
FY26 (full year)	**₹801 cr revenue, ₹222 cr profit**	Revenue up 71% and profit up 144%. Operating margin jumped from 27% to **44%** in a single year.
Five-year revenue path	**₹146 → 204 → 324 → 469 → 801 cr**	FY22 to FY26 — more than five-fold in four years, with no down year. The growth record is genuine.
Return on capital	**ROCE 70.7%; ROE 60.0%**	Extraordinarily high — the business earns about ₹71 a year on every ₹100 of capital. Such returns normally attract competition quickly.
Depreciation	**₹9 cr (FY25) → ₹48 cr (FY26)**	A five-fold jump, reflecting a large addition of hospital assets — capacity has been built well ahead of the revenue now being earned from it.
Stated ambition	**₹3,000 cr revenue, 7,000–10,000 beds, ₹1,000 cr profit**	Management's target is "3 years... maximum before 5 years". From ₹801 cr that implies roughly 40% compound growth — while revenue is currently flat quarter on quarter.

2. Concall coverage

Eight earnings-call transcripts were read, oldest to newest, spanning roughly two and a half years to the latest call. Management — Manish Grover (Managing Director), Ankush Kaushal (Whole-Time Director) and Nanak Chand (CFO) — holds calls quarterly and publishes transcripts on the company website.

Period	Call date	Revenue / margin	Read?
FY24	May 2024	FY24 ₹324 cr · 29%	Yes
H1 FY25	Nov 2024	₹114 cr · 35%	Yes
H2 & FY25	20 May 2025	FY25 ₹469 cr · 27%	Yes
Q1 FY26	Aug 2025	₹174 cr · 45%	Yes
Q2 FY26	Nov 2025	₹190 cr · 48%	Yes
Q3 FY26	Feb 2026	₹222 cr · 45%	Yes
Q4 & FY26	Jun 2026	₹216 cr · 36%	Yes
Q1 FY27 (Jun 2026 qtr)	**10 Aug 2026**	**₹224 cr · 41%**	**Yes — latest**

Span: eight calls over about two and a half years. Transcripts are filed with both exchanges and hosted on the company site — better disclosure practice than several companies in this coverage. Screener carries no transcript for a few 2023–25 calls.

2b. Latest concall highlights — Q1 FY27 (call held 10 Aug 2026) ★

- **Headline numbers strong year-on-year:** revenue **₹224 cr**, EBITDA **₹92 cr (41% margin)**, profit **₹65 cr (28% margin)** — revenue up 29% on the ₹174 cr of a year ago.
- **Patient volumes are genuinely growing fast:** in-patient (IPD) volume up **33%** (8,600 to 11,500), out-patient up **22%**, day-care up **31%** (16,000 to 19,000), and video consultations up **65%**. On volumes the ecosystem is clearly working.
- **But the volumes are not converting into revenue at the same rate** — and analysts pressed hard on it. Healthcare-services revenue grew only **11%** against 33% IPD volume growth, and one analyst noted the service business has sat between **₹95 cr and ₹105 cr for five straight quarters even as bed count rose**. Management's explanation is specific and partly satisfies the point: government business was deliberately cut from ₹15 cr to ₹5 cr because "I deliberately shut down credit business" to avoid receivables and bad-debt risk. Panchakarma private revenue grew from ₹78 cr to ₹100 cr, over 30%.
- **The product business has stopped growing sequentially:** medicine sales were ₹80 cr in Q1 FY26, rose to ₹118 cr in Q4 FY26, and were **₹118 cr again** this quarter. Management described it as "steady". Advertising spend rose ₹4 cr, with the return expected later.
- **Very large ambitions, loosely dated:** ₹3,000 cr of turnover "in about 3 years and I will achieve it maximum before 5 years", 7,000–10,000 beds, and a ₹1,000 cr profit aspiration — plus a first move into "ultra-luxury wellness". Management repeatedly asked to be judged annually rather than quarterly: "please don't judge us quarter-on-quarter."

2c. Business mix & capacity (quick facts)

Domestic vs export: entirely domestic — Ayurveda hospitals, clinics and product sales within India. No export revenue.

Revenue mix (Q1 FY27): roughly **₹105 cr from healthcare services** and **₹118 cr from products (medicines)** — products are now the larger half. Within services, Panchakarma private revenue is ₹100 cr and government business just ₹5 cr, down from ₹15 cr after management deliberately exited credit-based government work. The stated model is a loop: health camps and consultations feed in-patient admissions, and discharged patients become recurring medicine buyers.

Capacity utilisation: bed count is rising and management targets **7,000–10,000 beds** eventually, but **current bed count and occupancy are not disclosed** and none is invented here. The indirect evidence is unflattering: depreciation rose from ₹9 cr to ₹48 cr as assets were added, yet service revenue has been flat at ₹95–105 cr for five quarters — implying beds have been added faster than they are being filled with revenue. Day-care volumes

(16,000 to 19,000) and video consultations are the fastest-growing formats, both of which carry lower revenue per patient than in-patient stays — the likeliest structural reason volume growth of 33% produced revenue growth of 11%.

3. Earning Trigger thesis ★

The stated driver is a **preventive-healthcare ecosystem in Ayurveda**: attract people cheaply through camps and consultations, convert some into hospital admissions, then retain them as recurring medicine buyers after discharge. On a multi-year view it has plainly worked — revenue went from ₹146 cr in FY22 to ₹801 cr in FY26 with no down year, operating margin rose from 12% to 44%, and return on capital reached 70.7%. Patient volumes are still compounding fast: in-patient admissions up 33%, day-care up 31%, video consultations up 65%. That is a real business with real demand. **What stops this being a clear Yes is that the growth has stalled where it matters.** Revenue has been ₹222 cr, ₹216 cr and ₹224 cr across three quarters — flat for nine months. Healthcare-services revenue has sat in a ₹95–105 cr band for five quarters while beds were added and depreciation rose five-fold. Product sales have been ₹118 cr for two consecutive quarters. And in-patient volumes rising 33% while services revenue rises 11% means revenue per patient is falling sharply. Management's explanation — deliberately exiting ₹10 cr of government credit business — is credible and specific, but accounts for only part of the gap. Against a ₹3,000 cr target requiring roughly 40% annual growth, a flat nine months is the central question.

Trigger	What management said	Evidence so far	Horizon	Strength
Patient-volume growth	Ecosystem funnels camps → OPD → IPD → products	**Working.** IPD +33%, OPD +22%, day-care +31%, video consults +65% year-on-year	Live	Strong
Products as recurring revenue	Discharged patients become repeat medicine buyers	Products are now ₹118 cr, the larger half of revenue — but **flat for two quarters** at exactly ₹118 cr	Ongoing	Moderate
Services revenue from new beds	Bed count rising toward 7,000–10,000	**Not converting.** Service revenue stuck at ₹95–105 cr for five quarters while depreciation rose ₹9 cr → ₹48 cr	Now	Stalled
Exit from government credit business	"I deliberately shut down credit business" — government revenue ₹15 cr → ₹5 cr	A deliberate, sensible trade of revenue for cash quality. Explains ~₹10 cr of the shortfall	Done	Positive but small
₹3,000 cr revenue target	"3 years... maximum before 5 years", plus 7,000–10,000 beds and ₹1,000 cr profit	Requires ~40% annual growth from ₹801 cr, against revenue that has been flat for three quarters. No dated milestones given	FY29–FY31	Unproven
Ultra-luxury wellness	Entering "for the first time"	Newly announced; no capex, timeline or revenue figure disclosed	Unclear	Unproven
44% operating margin	Presented as the strength of the operating model at scale	Roughly double what large listed hospital chains earn. Genuinely unusual — and	Ongoing	Needs scrutiny

		unusually high returns invite competition		

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
May 2025	Projected FY26 revenue of roughly **₹720 cr**, extrapolating from ₹60 cr of sales in April 2025	**FY26 delivered ₹801 cr** — the projection was beaten by 11%	**Delivered**
FY22 → FY26	Scale the Ayurveda hospital and product ecosystem	Revenue ₹146 cr → ₹801 cr with no down year; margin 12% → 44%; profit ₹11 cr → ₹222 cr	**Delivered**
Q1 FY27	—	Volume growth delivered (IPD +33%, day-care +31%), but **service revenue growth of only 11%** and three quarters of flat total revenue	**Conversion stalled**
Q1 FY27	—	Deliberately cut ₹10 cr of government credit revenue to avoid receivables risk — and said so directly rather than letting the shortfall pass unexplained	**Candid**
Ongoing	₹3,000 cr revenue, 7,000–10,000 beds, ₹1,000 cr profit	Stated as "3 years... maximum before 5 years" — a wide window with no interim milestones to check against	**Unfalsifiable**
Ongoing	—	Management repeatedly asks not to be judged quarterly: "please don't judge us quarter-on-quarter". Reasonable for a long-cycle build — but it also deflects the specific question of why revenue has been flat for nine months	**Deflects scrutiny**
Q1 FY27	—	Announced entry into "ultra-luxury wellness" — a new venture, added while the existing service line is not growing sequentially	**Watch**
Ongoing	—	Holds quarterly calls and publishes transcripts on its own website — better disclosure practice than several peers in this coverage	**Good practice**

Narrative drift: The strategy has not drifted — the preventive-healthcare ecosystem story has been told consistently for two and a half years, and the four-year numbers back it emphatically. The single most checkable promise on record was met and beaten: in May 2025 management extrapolated from ₹60 cr of April sales to roughly ₹720 cr for FY26, and FY26 came in at ₹801 cr. They also hold quarterly calls and publish the transcripts, which is more than several companies in this coverage do. What is harder to credit is the response to the current soft patch. Analysts on the latest call asked, politely but repeatedly, why in-patient volumes could grow 33% while services revenue grew 11%, and why the service business has been stuck at ₹95–105 cr for five quarters despite more beds. The answer given — the deliberate exit from ₹10 cr of government credit work — is genuine and creditable, but it does not span the gap, and the fallback response was to ask not to be judged quarterly. Meanwhile the targets being set are extremely large (₹3,000 cr of revenue, ₹1,000 cr of profit, 7,000–10,000 beds) with a five-year outer bound and no interim milestones, and a new "ultra-luxury wellness" venture has been added while the core service line is flat. A

44% operating margin in hospital care — roughly double what the large listed chains earn — is the kind of figure that deserves an explanation, and none has been offered.

5. Bottom line — two verdicts

Durable earning trigger? → MAYBE

There is a real business here with real demand, and the four-year record is not in doubt: revenue from ₹146 cr to ₹801 cr with no down year, margin from 12% to 44%, and return on capital above 70%. Patient volumes are still compounding at rates most healthcare businesses would envy — in-patient admissions up 33%, day-care up 31%, video consultations up 65% — which says the ecosystem genuinely attracts people. But a trigger has to show up in earnings, and for three quarters it has not: revenue has been ₹222 cr, ₹216 cr and ₹224 cr, essentially flat for nine months. Services revenue has sat in a ₹95–105 cr band for five quarters even as beds were added and depreciation rose five-fold from ₹9 cr to ₹48 cr, and product sales have been exactly ₹118 cr for two consecutive quarters. Volumes up 33% against services revenue up 11% means revenue per patient is falling materially — partly by design, as day-care and video consultations grow fastest and bill less, and partly because ₹10 cr of government credit work was deliberately dropped. Neither explanation covers the whole gap. Set against a stated target of ₹3,000 cr requiring roughly 40% annual growth, and a share price sitting 40% below its high while these numbers were reported, the market is asking the same question this report is: when does the volume turn back into revenue?

Management consistent? → MAYBE

Management earns genuine credit on two counts. The one specific, checkable forecast they have made was beaten — in May 2025 they projected roughly ₹720 cr for FY26 and delivered ₹801 cr. And they run quarterly calls with published transcripts, so they can be questioned at all, which is more than can be said for several companies in this coverage. When pressed on the revenue shortfall they gave a specific, verifiable reason for part of it: government business was cut from ₹15 cr to ₹5 cr because they chose to stop extending credit and carrying bad-debt risk. That is a defensible trade and they volunteered it. What holds the verdict at Maybe is how the rest of the questioning was handled and what is being promised next. Asked why 33% volume growth produced 11% revenue growth, and why the service line has been flat for five quarters while bed capacity grew, the substantive answer was to redirect to volume metrics and to ask not to be judged quarter-on-quarter. Meanwhile the forward targets have grown very large and very loose — ₹3,000 cr of revenue and ₹1,000 cr of profit within "3 years... maximum before 5 years", 7,000–10,000 beds, no interim milestones — and a brand-new "ultra-luxury wellness" venture has been announced while the existing service business is not growing sequentially. Add a 41–44% operating margin that is roughly double what listed hospital chains earn and has never been explained, and there is enough unaddressed to withhold a Yes.

Prepared from eight Jeena Sikho Lifecare Ltd earnings-call transcripts, FY24 (May 2024) through Q1 FY27 (10 Aug 2026), sourced from Screener.in; all figures as disclosed by management on those calls or from Screener.in financial statements. Screener carries no transcripts for a few 2023–2025 calls. **This is not investment advice. Do your own due diligence.**
