Advance Agrolife Ltd

Concall-Tracker report · Screener ticker ADVANCE (NSE: ADVANCE) · listed 8 Oct 2025 · no concall transcripts — global web deep-dive · prepared 31 Aug 2026

1. Snapshot

What the business does (one line): Advance Agrolife is a Jaipur-based **agrochemicals maker** — it manufactures the chemicals farmers spray on crops (insecticides, weedkillers, fungicides and plant growth regulators) plus micro-nutrient and bio-fertilizers, and it also makes the **technical-grade active ingredients** that go into them. In plain terms: it sells crop-protection chemicals, mostly business-to-business to other brands and distributors rather than under its own consumer label.

Figure	Value	Plain-English read
Market capitalisation	**₹748 cr** (price ₹116)	What the whole company is worth on the stock market. The share has ranged ₹84–154 since listing at ₹100 in October 2025 — currently modestly above the issue price.
Price-to-earnings	**15.3×**; no dividend	About 15 times the last year's profit. All cash is retained to fund the expansion described below.
Q1 FY27 revenue (Jun'26 qtr)	**₹330.6 cr, up 96% YoY**	Total income in the June 2026 quarter almost **doubled** against ₹169 cr a year earlier. Note this is the seasonal peak quarter — see the seasonality warning below.
Q1 FY27 operating profit	**₹35.1 cr, margin 10.6%**	Operating profit before interest, tax and depreciation more than doubled, and the margin was **held roughly steady** — the scale-up did not come at the cost of profitability, which is the encouraging part.
Q1 FY27 net profit	**₹22.6 cr, up 152% YoY**	Profit after tax against ₹9 cr a year earlier.
FY26 (full year)	**₹642 cr revenue, ₹35.3 cr profit**	Revenue up 28% and profit up 38% on FY25 — the first full year as a listed company.
Five-year revenue path	**₹204 → 250 → 395 → 451 → 496 → 642 cr**	FY21 through FY26 — roughly a 25% compound annual growth rate over five years, and it has not gone backwards in any year. Trailing twelve months is now ₹800 cr.
Margin trend	**8% → 6% → 6% → 9% → 10% → 10%**	Operating margin improved from FY23 onward and has been stable at ~10% since. Thin, as agrochemical formulation usually is, but no longer deteriorating.
Return on capital	**ROCE 19.6%; ROE 17.2%**	For every ₹100 of capital the business earns about ₹20 a year before tax — genuinely good for a thin-margin manufacturer, because the assets turn over quickly.
IPO	**₹192.9 cr raised, Oct 2025**	Subscribed about 57 times at ₹95–100 a share. Proceeds went largely to working capital, and the company has reported **no deviation** in how the money was used.

2. Concall coverage

No concall transcripts were available on Screener for this company — this report is based on a global web deep-dive. Screener lists three investor-call entries (February, May and August 2026, i.e. one per quarter since listing) but carries no transcript file for any of them. So the company does appear to hold quarterly calls; their contents simply are not accessible here. Management commentary below is taken from results releases and published reporting of those calls, not from a transcript, so nothing is quoted verbatim.

A structural limitation you should weigh heavily: Advance Agrolife listed on **8 October 2025**. There are only about three quarters of public reporting in existence. There is no multi-year record of promises made to public shareholders to grade — the consistency verdict below reflects that.

Sources used: Q1 FY27 results release and published coverage (August 2026); FY26 audited results (board meeting 8 May 2026) and coverage; the IPO prospectus/DRHP and IPO documentation (September–October 2025) for business, capacity and promoter detail; BSE/NSE filings including the IPO fund-utilisation statement; and Screener.in financial statements.

2b. Latest update highlights — Q1 FY27 (results August 2026) ★

- **Revenue nearly doubled:** total income **₹330.6 cr, up 96% year-on-year**; EBITDA **₹35.1 cr**, more than doubled; profit after tax **₹22.6 cr, up 152%**. Crucially the EBITDA margin held broadly steady at **10.6%** — growth was not bought with discounts.
- **Management's explanation is specific and checkable:** Chairman and Managing Director Omprakash Choudhary pointed to geopolitical uncertainty and supply-chain disruption in the industry, and said the company's decision to **hold adequate inventory — funded by working capital strengthened with IPO proceeds —** let it keep supplying customers without interruption and respond quickly when demand spiked. In other words, the IPO money was converted into stock, and the stock was converted into share gain while rivals were short.
- **A dated expansion roadmap, unusually concrete for a company this new:** commission **Unit 4 by Q3 FY27**; build **Unit 5 at Dahej** (Gujarat — the first facility outside Rajasthan, and on the coast, which matters for exports and imported raw material); scale **2,4-D herbicide capacity toward 10,000 MT by Q4 FY28**; and grow **exports toward 20% of revenue by FY29**.
- **The preceding full year was solid too:** FY26 revenue ₹642 cr (up 28%) and net profit ₹35.3 cr (up 38%), with the March quarter improving sharply — revenue ₹120 cr against ₹89.8 cr, and profit ₹7.5 cr against ₹1.4 cr a year earlier.
- **Read the seasonality before reading the growth.** This business is heavily tied to the *kharif* sowing season: the June and September quarters are large, December and March are small. Q1 FY27's ₹330.6 cr compares with just ₹124 cr in the immediately preceding March quarter. The 96% year-on-year comparison is the meaningful one; the sequential jump is mostly the calendar.

2c. Business mix & capacity (quick facts)

Domestic vs export: overwhelmingly **domestic**. The company sells across **19 Indian states** and exports to **7 countries**. The precise export share is not disclosed, and none is invented here — but the stated ambition of reaching **20% of revenue by FY29** implies it currently sits well below that. Plain read: exports are today a small side business and a stated multi-year priority, not a current earnings driver.

Product and customer mix: a **business-to-business** model — it manufactures for other brands and distributors rather than selling to farmers under its own label. The range spans agrochemicals (insecticides, herbicides, fungicides, plant growth regulators), fertilizers (micro-nutrient and bio-fertilizers), and **technical-grade actives**, the raw active ingredients that go into formulations. Making both technicals and formulations is the backward-integration angle: it captures more of the value chain than a pure formulator.

Capacity utilisation: three plants in Jaipur, Rajasthan with combined capacity of about **89,900–90,000 MTPA** — Unit I at Bagru is the technicals hub (~6,900 MT), Unit II at Dahami Khurd is the sulphur-products specialist (~51,000 MT), and Unit III, also Dahami Khurd, is the volume plant for liquid insecticides, herbicides and bio-fertilizers (~32,000 MT). **Utilisation is not disclosed**. Two more units are planned: Unit 4 by Q3 FY27 and Unit 5 at Dahej. The workforce was 543 permanent employees as of July 2025, and the business carries a roughly 20-year operating history despite its short listed life.

3. Earning Trigger thesis ★

The driver is straightforward and, unusually for a recent listing, it is already visible in the numbers rather than only in a slide deck: **a capacity-led volume ramp in Indian crop protection, funded by IPO money, with backward integration into technical-grade actives holding the margin steady as volume scales.** Revenue has compounded at roughly 25% a year for five years, from ₹204 cr in FY21 to ₹642 cr in FY26, without a single down year, while operating margin improved from 6% to a stable 10% and return on capital reached ~20%. Q1 FY27 then nearly doubled revenue year-on-year with margin held at 10.6%. Management's own account of that quarter is the most interesting part of the thesis: it says it won business because it held inventory when the industry was disrupted, and it could hold that inventory because the IPO had strengthened its working capital. That is a coherent, specific and testable claim. Ahead of it sits a dated roadmap — Unit 4 by Q3 FY27, Unit 5 at Dahej, 2,4-D to 10,000 MT by Q4 FY28, exports to 20% by FY29 — which gives four checkable milestones over the next three years. The two things that should temper enthusiasm are that margins remain thin at ~10% in a sector known for Chinese oversupply and price wars, and that a single peak-season quarter is a very small evidence base.

Trigger	What the record says	Evidence so far	Horizon	Strength
Capacity-led volume growth	~90,000 MTPA across three Jaipur units; Unit 4 due Q3 FY27, Unit 5 planned at Dahej	Five straight years of growth, ₹204 cr → ₹642 cr; Q1 FY27 revenue +96%. Unit 4 has a date attached and is the near-term test	FY27–FY29	Strong
Working capital as competitive weapon	IPO proceeds used to strengthen working capital, enabling inventory to be held through supply disruption	Management credits this directly for the Q1 FY27 surge — and the ₹192.9 cr raise plus "no deviation" in fund use corroborates the mechanism	Now	Moderate
Backward integration into technicals	Unit I is the technicals hub; the company makes both actives and formulations	Margin improved 6% → 10% over three years and **held at 10.6% while revenue doubled** — consistent with real integration benefit	Structural	Moderate
2,4-D capacity to 10,000 MT	Target of Q4 FY28	A specific product bet with a specific date — but nothing built yet, and 2,4-D is a widely made generic herbicide	FY28	Unproven
Export expansion to 20% of revenue	Target of FY29; currently exports to 7 countries	The longest-dated promise and the least evidenced. Dahej's coastal location is a logical enabler	FY29	Unproven
Capital efficiency	ROCE 19.6%, ROE 17.2% on ~10% margins	Real and verifiable — the business turns its assets over fast, so thin margins still produce good returns	Structural	Strong
Seasonality & monsoon dependence (risk)	Not framed as a risk by management	Structural: Q1 FY27 did ₹330.6 cr against ₹124 cr in the March quarter. Earnings are	Every year	Structural risk

		concentrated in two quarters and hostage to the monsoon		
Thin margins in a competitive sector (risk)	—	~10% operating margin, business-to-business model with limited pricing power, in a market repeatedly disrupted by low-cost Chinese supply	Ongoing	Caps upside

4. Management Consistency scorecard

Read this as **severely limited**. The company has been listed since October 2025, so there are only about three quarters of public results, and no earnings-call transcript is accessible. There is simply not much of a promise trail to grade yet.

Period	What was promised / expected	What actually happened	Verdict
FY21 → FY26 (mostly pre-listing)	Scale the crop-protection business	Revenue ₹204 cr → ₹642 cr with no down year; margin 6% → 10%; profit ₹9 cr → ₹35 cr	**Delivered**
Oct 2025 (IPO)	Deploy ₹192.9 cr of proceeds as stated, principally to working capital	**No deviation** reported in fund utilisation through Q4 FY26 — a small but genuinely verifiable first test that was passed	**Delivered**
FY26 (first listed year)	Continue growing after listing	Revenue +28% to ₹642 cr; profit +38% to ₹35.3 cr; Q4 profit ₹7.5 cr against ₹1.4 cr	**Delivered**
Q1 FY27	—	Revenue +96%, profit +152%, margin held at 10.6%. Management gave a specific, coherent reason (inventory held through disruption, funded by IPO money) rather than a vague one	**Delivered**
Q3 FY27	Commission Unit 4	Not yet due — this is the first hard, dated milestone by which management can be judged	**Too early**
Q4 FY28	2,4-D capacity to 10,000 MT	Not yet due	**Too early**
FY29	Exports to ~20% of revenue; Unit 5 at Dahej	Not yet due; export share is not currently disclosed, which will make this hard to track	**Too early**
Ongoing	—	**No earnings-call transcript is published or accessible**, despite calls apparently being held each quarter since February 2026	**Disclosure gap**

Narrative drift: There has not been enough time for drift. In the three quarters since listing the story has been the same one told in the IPO documents — expand capacity, integrate backward into technical-grade actives, push into exports — and the numbers have moved in the right direction throughout. Two things are worth crediting. First, the IPO fund-utilisation statement shows **no deviation**, which is the cheapest promise a newly listed company can break and this one did not. Second, management's explanation of the Q1 FY27 surge was specific and falsifiable rather than promotional: it named the mechanism (inventory held through a supply disruption, funded by IPO working capital) instead of claiming a vague demand upcycle. Set against that, the roadmap that carries the investment case — Unit 4 in Q3 FY27, Unit 5 at Dahej, 2,4-D at 10,000 MT by Q4 FY28, exports at 20% by FY29 — is entirely in the future, and the first of those dates has not yet arrived. The one thing genuinely within management's control that they are not doing is publishing transcripts: calls are evidently being held, but shareholders outside them have no record of what was said, which is exactly what makes a promised-versus-delivered read possible in later years. For a company whose entire case rests on hitting four dated milestones, that omission matters more than it would elsewhere.

5. Bottom line — two verdicts

Durable earning trigger? → YES

The driver is concrete, currently working, and backed by more history than the eleven-month listing suggests. Revenue has compounded at roughly 25% a year for five years — ₹204 cr to ₹642 cr with no down year — while operating margin improved from 6% to a steady 10% and return on capital reached about 20%. Q1 FY27 then nearly doubled revenue and held the margin at 10.6%, which is the important detail: this was volume and share gain, not a price spike, and it did not dilute profitability. Management's account of how it happened is specific and credible — IPO proceeds funded inventory, inventory allowed uninterrupted supply while the industry was disrupted, and customers moved. Ahead lie four dated milestones (Unit 4 in Q3 FY27, Unit 5 at Dahej, 2,4-D to 10,000 MT by Q4 FY28, exports to 20% by FY29) that give a clear multi-year runway and, equally useful, clear ways to be proved wrong. Two honest qualifications. Margins are thin at ~10% in a sector regularly flattened by low-cost Chinese supply, so there is little cushion if pricing turns. And earnings are heavily seasonal and monsoon-dependent — ₹330.6 cr in the June quarter against ₹124 cr in March — so no single quarter should be annualised. The trigger is real; it is just riding a cyclical, weather-exposed base.

Management consistent? → MAYBE

This is a Maybe because of insufficient evidence, not because of anything management has done wrong — and that distinction matters. Everything checkable so far has been delivered: five years of uninterrupted revenue growth into the listing, a first full listed year with revenue up 28% and profit up 38%, a quarter with revenue up 96% at a held margin, and — the one genuinely verifiable promise a new listing can be held to — IPO proceeds deployed with **no reported deviation**. Management's explanation of its own best quarter was mechanism-based rather than promotional, which is a good early sign. But the company has been public for under a year. Every claim that carries the investment case sits in the future, and the earliest of them, commissioning Unit 4, is not due until Q3 FY27. There is no multi-year record of a target set and then met, missed or quietly dropped — which is precisely what this verdict is supposed to measure. Compounding that, no earnings-call transcript is published even though calls are held each quarter, so there is no accessible record of what management tells analysts and therefore nothing to hold them to next year. Ask again after Unit 4's due date: if it lands on time and the export share starts being disclosed, this becomes a Yes quickly. Today there is simply not enough on the record to award one.

Prepared from public sources on 31 Aug 2026. No concall transcripts are available on Screener for this company — three investor-call entries are listed (Feb, May and Aug 2026) but no transcript file exists for any — so this is a global web deep-dive: Q1 FY27 results release and coverage (Aug 2026), FY26 audited results (8 May 2026) and coverage, the IPO prospectus and offer documentation (Sep–Oct 2025), exchange filings including the IPO fund-utilisation statement, and Screener.in financial statements. No management wording is quoted verbatim. The company listed on 8 Oct 2025, so the public record spans under one year. **This is not investment advice. Do your own due diligence.**
