Borosil Renewables Ltd — Concall Tracker

India's largest solar (photovoltaic) glass manufacturer · Report quarter: **Q1 FY27 (Apr–Jun 2026)** · Prepared 24 Jul 2026

Based on Screener.in concall transcripts. This is not investment advice — do your own due diligence.

1. Snapshot

What the business does: Borosil Renewables makes the special toughened glass that sits on top of solar panels (solar photovoltaic glass). It is India's largest and effectively the only large domestic maker of this glass. It sells to companies that assemble solar modules (panels). It earns money by producing glass at scale and selling it at a price that, thanks to import duties on Chinese/Vietnamese glass, now sits close to the (higher) landed cost of imports.

Market cap	₹8,161 cr	the total stock-market value of the company.
Price / P/E	₹581 · 20.3x	you pay about ₹20 for every ₹1 of yearly profit (trailing).
FY26 revenue	₹1,535 cr	total sales for the year to Mar 2026 — up ~39% on FY25's ₹1,107 cr.
FY26 operating margin	31%	₹31 of operating profit per ₹100 of sales — up from 15% in FY25.
FY26 net profit	₹21 cr	looks tiny, but only because a one-time ₹326 cr write-off of the failed German business was booked this year; the underlying operation was strongly profitable (TTM profit ₹381 cr).
Return on capital (ROCE)	26.9%	the business earns ~27 paise of pre-tax profit on every ₹1 of capital employed — a high, healthy return.
Borrowings	₹162 cr	low debt, down from ₹363 cr in FY23 after equity raises and strong cash flow.

2. Concall coverage

We read the company's earnings calls covering the last ~3 years — 13 quarterly calls from Q1 FY24 (Aug 2023) through Q1 FY27 (Jul 2026). This is a full, from-scratch read (no prior report existed for this company). Coverage is deep and the consistency read below is well-supported.

Quarter	Call date	Read?
Q1 FY24 → Q4 FY25 (8 calls)	Aug 2023 – May 2025	Yes — read for backstory
Q1 FY26	24 Jul 2025	Yes
Q2 FY26	12 Nov 2025	Yes
Q3 FY26	29 Jan 2026	Yes
Q4 FY26	May 2026	Yes
Q1 FY27 ★ (latest)	**17 Jul 2026**	**Yes — full deep read**

2b. Latest concall highlights — Q1 FY27 (call 17 Jul 2026)

- **Strong quarter.** Standalone sales ₹405.7 cr, up ~22% on last year (₹332.3 cr) — total sales grew about a fifth year-on-year. Operating profit (EBITDA) ₹142 cr, up 53% — core profit grew much faster than sales because prices rose. Reported net profit ₹87 cr.
- **Margins at a peak and holding.** EBITDA margin 35% of sales, above 33% for the fourth quarter in a row — the business now keeps ₹35 of operating profit per ₹100 of sales, versus single digits two years ago. Average selling price ₹160.3 per mm/sq.m vs ₹138.1 a year ago (includes a ₹9.5 temporary fuel surcharge that is now being wound down as fuel prices ease).
- **Duty wall got taller.** On 2 Jun 2026 the government extended the countervailing duty of 9.71% on Malaysian solar glass for another 5 years — closing the last big import loophole after the 5-year anti-dumping duty on China/Vietnam glass imposed in Dec 2024.
- **Expansion on track.** The 600-tonne-per-day capacity addition (two new furnaces, SG4 + SG5) is in full swing, to commission by March 2027; full revenue from FY28. Management says it will lift sales ~60% and add roughly ₹80–85 cr of EBITDA per quarter — and it is fully funded, no new share issue planned.
- **German drag finally gone.** Overseas subsidiaries produced zero revenue and only ₹0.84 cr of negative EBITDA this quarter (vs ₹23 cr negative a year ago) — the loss-making German business is now written off and out of the numbers. Tone: confident but measured; management flagged eventual furnace-repair downtime and would not give profit guidance.

2c. Business mix & capacity

Domestic vs export: Now overwhelmingly domestic. Exports are a small single-digit share (management: 7–10% range, and the small US exposure is "very, very small" and unaffected by US tariffs). With the German business shut, the company is effectively a pure India solar-glass play. Almost all sales are now within India, where demand and prices are strong.

Capacity & utilization: Running at **full capacity — 1,000 tonnes per day**, i.e. ~100% utilization (production +10% YoY at 125 lakh sq.m). No spare capacity — the only way to grow volume is the new furnaces. Expansion under way takes capacity to **1,600 TPD (+60%)** by March 2027. Concentration: top 10 customers ≈ 65–68% of volume.

3. Earning Trigger thesis ★

The core driver is simple and has now clearly played out: **import duties turned a loss-making commodity glass maker into a high-margin one.** For years cheap Chinese, Vietnamese and Malaysian solar glass flooded India and crushed prices. Management spent FY24–FY25 lobbying for protection; the government delivered a basic customs duty (Oct 2024), then a definitive 5-year anti-dumping duty on China/ Vietnam (May 2025, valid to Dec 2029), and extended the Malaysia duty in Jun 2026. With imports now landing dearer, Borosil's realizations climbed from ~₹105 to ~₹160 per mm/sq.m and EBITDA margin re-rated from under 6% (early 2024) to 33–35%. On top of that sits structural demand — the government's local-content (ALMM) rules are pushing Indian solar module capacity up sharply (11 GW to 203 GW in 5 years), while domestic glass still meets only ~25% of demand — and a fully-funded 60% capacity expansion arriving FY28.

Trigger	What management said	Evidence so far	Horizon	Strength
Import duty protection (ADD China/Vietnam + CVD Malaysia)	Duties would let prices rise to import-parity and margins reach ~30% sustainably	**Delivered.** Definitive 5-yr ADD (to Dec 2029); Malaysia CVD extended to 2031; margins now 33–35%, above target for 4 straight quarters	Locked in to ~2029–31	**Strong — promised and delivered, with a legal shelf-life**
Structural domestic demand (ALMM local-content push)	Module capacity exploding; domestic glass supplies only ~25% of need, imports fill the rest	Module capacity 11→203 GW in 5 yrs; ALMM-2 (cells) live Jun 2026; glass demand ~11,000 TPD vs ~2,600 TPD local supply	Multi-year	**Strong — large, policy-backed supply gap**
600 TPD capacity expansion (SG4 + SG5)	+60% capacity, ~₹80–85 cr extra EBITDA/quarter, fully funded, commission by Mar 2027	Construction "in full swing," timeline pulled forward vs earlier plan; no equity raise needed	FY28 full impact	**Moderate → Strong — funded & on track, but revenue only lands FY28**
Rooftop solar kit (new, module+inverter+battery)	Leverage the Borosil brand; internal target ₹36 cr revenue FY27	Very early — ₹1.3 cr in Q1; single-digit margins (a trading business, not manufacturing)	Nascent	Weak/Unproven — tiny, low-margin, watch only

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 (Aug'23–May'24)	Government would restore trade protection (BCD, then anti-dumping duty)	BCD exemption disappointingly extended to Sep'24; but ADD/CVD application accepted & under investigation. Margins hit a trough (5.8% in Q4)	Too-early / On-track
FY25 (Aug'24–May'25)	Duty to come and lift realizations toward ~₹140, margins to ~30%	**Delivered.** BCD (Oct'24) → provisional ADD (Dec'24) → definitive 5-yr ADD+CVD (May'25). Realizations climbed; margins recovered 12%→24%	Delivered
FY26 (Jul'25–May'26)	~28–30% then ~33% sustainable margins; expansion on schedule; German mess to be resolved	**Delivered / beat.** Margins 27.8%→33.2%→33.4%; expansion pulled forward (Mar'27→Dec'26 build); German business written off & deconsolidated cleanly	Delivered
Capacity plan (FY24–FY27)	Shifted: 1,100 TPD → "on hold" → 500 → 600 TPD	Plan flip-flopped with duty uncertainty, but 600 TPD is now funded & building on time	Partly (sensible pivots)
German subsidiary (GMB/Interfloat)	Repeated hopes of a turnaround (EU demand, new German govt support)	**Failed.** Furnace cooled, insolvency, ₹326 cr write-off. Management openly called it a "blunder" and exited decisively	Missed — but owned & cleaned up

Narrative drift: Remarkably steady on the thing that mattered. For three years the single headline trigger was trade protection on imported solar glass, and management tracked it call-by-call and delivered it — with margins landing exactly where (or better than) they guided. The two blemishes are honest ones: the German business was a genuine, costly mistake, but they admitted it plainly and wrote it off rather than dragging it on; and the capacity target wandered (1,100→500→600 TPD), which reflected prudent caution while duties were uncertain rather than story-spinning. Tone has moved from defensive/loss-making (FY24) to confident and settled (FY26–27) as each promised catalyst arrived.

5. Bottom line — two verdicts

Durable earning trigger? → **YES**

There is a concrete, still-live driver with hard evidence it is working: legally-backed import duties (to 2029–31) have re-rated margins to 33–35% and held them there for four straight quarters, sitting on top of a large, policy-driven domestic demand gap and a fully-funded 60% capacity expansion landing in FY28. The main watch-items are a periodic furnace-refurbishment shutdown (75–90 days, likely FY28) that will dent volumes temporarily, and the long-run risk that heavy new industry capacity (much of it captive) eventually pressures prices — but with domestic supply still meeting only ~25% of demand, that is a later-stage concern.

Management consistent? → **YES**

On the central thesis, management promised trade protection and margin recovery for three years and delivered it precisely, with steadily rising realizations and margins that matched or beat guidance, plus an expansion that is on time and funded without dilution surprises. The record is not spotless — the German venture was a real, expensive misstep and the capacity target shifted several times — but both were handled with candour (they called the German loss a "blunder") and decisive action rather than obfuscation. The promised-vs-delivered thread is strong enough to earn a clear Yes, with the German episode noted as the one genuine blot.
