Huhtamaki India Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026 — the company's own **Q2 CY2026**) · NSE: HUHTAMAKI · BSE: 509820 · Report prepared 3 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's own earnings-call transcripts and public financials.

1 Snapshot

What the business does: Huhtamaki India makes *flexible packaging* — the printed plastic pouches, wrappers, sachets and labels that everyday goods come in. Its core product is the **laminate**: a multi-layer sheet of plastic film, sometimes with aluminium foil, printed and glued together and formed into a pouch. Customers are **FMCG** companies (fast-moving consumer goods — food, drinks, soap, shampoo, detergent), from Unilever and Nestlé down to regional brands. It is the Indian arm of Finland's Huhtamaki Oyj, which owns 67.7%. About **30% of volume is exported**. Raw material is mostly polymer film, so profit depends on passing polymer price swings through to customers fast.

Read this first — the calendar. Huhtamaki India's financial year runs **January to December**, not April to March. This report sits in the project's **Q1 FY2027** folder, which means the **April–June 2026** quarter. Huhtamaki calls that same quarter **Q2 CY2026**. Every period below carries both labels. "CY2025" means January–December 2025.

Measure	Value	What it means in plain words
Market cap / share price	₹2,267 cr / ₹300	A small-cap. The stock has roughly doubled off its ₹149 low — an analyst on the July call said it "almost doubled in the last month." Much of the good news is already paid for.
Latest quarter sales (Apr–Jun 2026)	₹750 cr	Up 22.5% on ₹612 cr a year earlier — the best quarter in three to four years. Management's own "net sales" number is ₹723 cr; the gap is scrap sales and export incentives.
Latest quarter margin / profit	10.0% / ₹44 cr	Ten paise of operating profit per rupee of sales, against seven a year ago. Net profit up 76%; earnings per share ₹5.79 against ₹3.30.
CY2025 sales	₹2,469 cr	**Down** 2% on CY2024 and 17% below the CY2022 peak of ₹2,983 cr. Revenue has gone nowhere for seven years in a market management's own annual report says grows 10–12% a year.
CY2025 profit / margin	₹118 cr / 8.0%	Up from ₹88 cr and 4.7% in CY2024. The margin repair is real and is the whole investment case.
CY2023 net profit	₹410 cr	Ignore this number. It includes ₹369.5 cr of one-off income from selling the Thane and Ambarnath land — the Thane deal alone was worth ₹429 cr, to Phoenix Mills. The packaging business earned a small fraction of that.
Borrowings (Jun 2026)	₹145 cr	Down from ₹410 cr in Dec 2022, and all of it one loan from the Finnish parent. Against ₹395 cr of cash and liquid funds the company is **net cash** — it owes nothing on balance.
Return on capital employed	12.0%	Twelve paise of operating profit per rupee of capital tied up. Recovered from 2% in CY2021 but still modest — a large idle cash pile earning ~6% drags it down.
Cash conversion cycle	26 days	Cash stuck in stock and unpaid bills, net of what it owes suppliers. Down from 51 days in CY2022 — a genuine working-capital win.
Free cash flow CY2025	₹184 cr	Cash left after running and maintaining the business — more than the ₹118 cr of accounting profit, so the earnings are real cash, not accruals.

2 Concall coverage

Company's quarter	Calendar period	Call date	Transcript read?
Q1 CY2023	Jan–Mar 2023	28 Apr 2023	Yes
Q2 CY2023	Apr–Jun 2023	21 Jul 2023	Yes
Q3 CY2023	Jul–Sep 2023	23 Oct 2023	Yes
Q4 + FY CY2023	Oct–Dec 2023	12 Feb 2024	Yes
Q1 CY2024	Jan–Mar 2024	26 Apr 2024	Yes
Q2 CY2024	Apr–Jun 2024	26 Jul 2024	Yes — *listed three times on Screener; all one call*
Q3 CY2024	Jul–Sep 2024	25 Oct 2024	Yes
Q4 + FY CY2024	Oct–Dec 2024	14 Feb 2025	Yes
Q1 CY2025	Jan–Mar 2025	25 Apr 2025	Yes
Q2 CY2025	Apr–Jun 2025	25 Jul 2025	Yes
Q3 CY2025	Jul–Sep 2025	15 Oct 2025	Yes
Q4 + FY CY2025	Oct–Dec 2025	13 Feb 2026	Yes
Q1 CY2026	Jan–Mar 2026	13 May 2026	Yes
Q2 CY2026 = project Q1 FY27	**Apr–Jun 2026**	**27 Jul 2026**	**Yes — latest call ★ (read in full)**

Coverage, stated honestly. Screener.in lists **27 separate Huhtamaki concalls** back to February 2016. **26 have a readable transcript; one does not.**

- **All 14 calls above were downloaded and read** — every quarter from Jan–Mar 2023 to Apr–Jun 2026, with no gaps. That is the entire modern record and the basis for this report.

- **A duplicate, not a missing call:** Screener shows **three** rows for Jul 2024. Two carry working links (BSE filing and company website); the third shows "Transcript" as plain text with **no link at all**. Comparing the text of the two downloadable files confirms both are the same event — the Q2 CY2024 call of 26 July 2024. The unlinked row is a third copy of it. Nothing is missing.
- **One genuine gap:** the **Nov 2018** row has a Transcript link, but it is dead — it redirects instead of returning a PDF. That call cannot be read. It is from 2018, outside the period analysed here, so it changes no conclusion, but it is a real gap and is recorded as one.
- **A four-year silence, not a scraping failure:** after August 2019 the company held **no earnings calls until May 2023**. There are no transcripts for CY2020–CY2022, including the loss-making CY2021, because no calls took place. Those years are covered here only through reported financials.
- The twelve pre-2020 calls (Feb 2016 – Aug 2019) were downloaded but fall outside the window and were not deep-read.

★ Latest concall highlights — Q2 CY2026 / Apr–Jun 2026 (call held 27 July 2026)

- **Much the best quarter in years.** Net sales ₹723 cr, up 23.1%. EBITDA (operating profit before interest, tax and depreciation) up 55%, margin 8.3% → **10.5%**. Profit before tax up 77%, earnings per share up 77%. The MD called it "one of the highest sales that we have recorded in consecutive last 3 to 4 years."
- **But only about a third of that was more product sold.** Management split the 23% roughly three ways — a third price, a third volume, a third product mix. Volume growth was "**high single digit**"; the exact figure was withheld. After years of *falling* volume, that is the genuinely new fact.
- **A war inflated the top line, and management said so unprompted.** A Middle East crisis pushed raw-material costs up from late February; Huhtamaki passed most of it on, which lifts revenue without lifting profit. It also got a one-off boost from **customers stockpiling** ahead of further price rises — "some of which is going to sustain and some of which is going to, kind of, even out over the period of time."
- **They refused to call ₹750 cr the new run rate.** Asked directly: the number "includes price also... whether that would be INR750 crores or whether that would be INR650 crores, I can't tell you." On 10% margins: "I can't answer to you whether it's going to be 10% or 15% or 8% next quarter." No guidance was given, and none was faked.
- **The balance sheet is a fortress, and idle.** Net debt nil; ₹270 cr in banks, ₹125 cr in liquid funds, ₹427 cr of unused limits. No capex programme, no acquisition on the radar ("not our focus at the moment"), dividend payout just 13%. The cash earns ~6% — which is why return on capital sits at 12% while margins hit 10%.

Business mix & capacity. Exports ≈30% of volume / domestic ≈70% — the MD's own figure in July 2026: "30% of our sales volume comes from exports... Southeast Asia, Africa, Europe as well as Americas." That 70:30 split has been repeated on essentially every call since 2023, making it one of the few genuinely stable disclosures. *Plain read: about one pouch in three leaves India, and that has not changed.* In the latest quarter **exports and domestic grew at almost the same rate**, so the 23% jump was broad, not one lucky market. The United States is a rounding error: "our total impact is only 1% of our sales." *Plain read: tariff headlines barely touch this company.* **Product mix: not disclosed as a split,** and neither is the labels-versus-flexibles breakdown. Growth is tilting toward **home care and liquid categories**, which are outgrowing food and beverages. **Capacity utilisation: last disclosed at ~60% in 2023, then deliberately withdrawn.** This is the most important withheld number in the file — and it was not always withheld. July 2023: plants "running at around 60% utilization. 60%, 62%," against 75–80% in early 2022. October 2023: "60% to 63%." *Plain read: about two-fifths of the machinery was standing idle.* From February 2024 disclosure stopped, and management said why: "**by indicating the capacity utilisation, it kind of exposes the overall strategy.**" It has been refused on every call since — "can give a misleading picture" (Jul 2025), "competitive in nature" (May 2026), "competitive nature of disclosure" (Jul 2026). The one figure offered in between, February 2025's "15% to 20% more production" available, cannot be squared with a plant at 60%, which has roughly 65% headroom. *Plain read: no current number exists publicly, and the last honest one was uncomfortable. None is invented here.* Capital work-in-progress has collapsed from ₹131 cr (Dec 2023) to ₹8 cr (Jun 2026) — they are not building anything, because they do not need to. **Footprint has genuinely shrunk:** 15 manufacturing sites in early 2023 → 10 by year-end, pressure-sensitive label plants six → three, headcount ~3,000 → ~2,600. **Daman is now curtailed and up for sale.** The big disposals are done: Thane and Ambarnath land produced ₹369.5 cr of exceptional income in Oct–Dec 2023 (against ₹34.1 cr of redundancy cost), and in Oct 2024 management declared the programme closed — "we have concluded whatever was planned."

★ 3. Earning-trigger thesis

The story has been stable for three years: **stop chasing volume, walk away from low-margin customers and products, cut cost, and let the margin come back.** Since January 2026 the new MD has compressed it to three words — *profitable growth, capital discipline, accountability*. **On margin it worked:** 4.2% (CY2021) → 4.7% (CY2024) → 8.0% (CY2025) → 10.5% in the latest quarter. **On revenue it has not:** ₹2,469 cr against ₹2,983 cr three years ago, in a 10–12% growth market. The repair landed; the growth engine has not started. The question that decides this stock is whether June's volume recovery is the engine finally turning over, or a war-driven stock-up that reverses in December.

Trigger	What management said	Evidence so far	Horizon	Strength
Margin repair from pruning low-value business	"We are selective in participation in the business that we want to operate in... we may have lost certain volumes at the low end." Restated every call since 2023.	**Delivered, and measurably.** Management's own EBIT ladder: 3.0% (Jul–Sep 2024) → 3.0% → 6.3% → 6.1% → 8.6% → ~8% → **8.5%** (Apr–Jun 2026). EBITDA margin 4.7% CY2024 → 8.0% CY2025 → 10.5%. In Oct 2025 the MD noted double-digit EBITDA had "happened almost after four years to five years."	Already done	**Strong** The clearest promise kept.
Volume growth finally returning	Oct 2025, asked when volume returns: "**Yes, I would say so**... the idea is to at least grow with the industry." Jul 2026: "high single digit."	**Just turned — one quarter old.** Volumes fell year-on-year in every quarter of CY2025, and CY2025 as a whole was below CY2024. Then Apr–Jun 2026 delivered high-single-digit growth. But management admits part is customer stockpiling and says it "would not expect 23% growth every quarter."	Unproven — watch Oct–Dec 2026	**Moderate** Real, but one quarter and partly borrowed from the next.

Raw-material pass-through	"Wherever possible, we pass our raw material changes to our customer. And this works both ways." Contracts indexed monthly or quarterly.	**Proven under stress.** Faced low-to-medium double-digit cost inflation in 2026 and *expanded* margin through it; India was the first Huhtamaki region worldwide to push the price rise through. But this is a defence, not a growth engine — and roughly a third of the latest quarter's "growth" is just polymer prices handed on.	Ongoing	**Strong** Real competence. Not growth.
blueloop — recyclable mono-material packaging	"Strategy 2030 — we want to convert all the product portfolio 100% to the recyclable, and blueloop is the vehicle." Sold since 2022 as the premium, margin-accretive future.	**A clear miss, admitted.** Adoption 22–25% in mid-2023, 27–30% today. Meanwhile the target went *up*: 60–65% by 2030 (Jul 23) → "beyond 90% by 2030, 10% a year" (Feb 24) → "40–50% next year" (Jul 24). Feb 2026: "*the expectation we had in terms of growth has not come through.*" The premium claim was retracted in three steps, ending at "it's more challenging for us than actually making better money." And the 27–30% is not even blueloop — in Oct 2025 the MD conceded it counts "all products which are recyclable."	No timeline	**Weak** Capital spent, returns absent, metric redefined.
Net-cash balance sheet	"Our net debt remains nil... we keep doing our strategic analysis with respect to our current capacity, future opportunities."	**Delivered on debt, idle on deployment.** Borrowings ₹410 cr → ₹145 cr — but retired out of the ₹429 cr Thane land sale, not out of trading. Management's own account of the proceeds: "retirement of the external borrowings and then some portions... kept into the investments of certain financial instruments," plus a higher dividend. None was reinvested in growth. Today: ₹395 cr cash, ₹427 cr unused limits, no capex, no acquisition, 13% payout.	Optionality only	**Moderate** Safety, yes. A trigger, not yet.
Cost self-help: solar, productivity, plant closures	Solar captive plant at Khopoli to supply "almost 50% of power" for that site. Plus the 2023 network cut and continuous productivity work.	**Small, real and verifiable.** Sites cut 15 → 10, headcount ~3,000 → ~2,600; employee cost fell ~15% sequentially in Q3 CY2025; solar goes live Jul–Sep 2026 after a one-quarter slip. Management is honest about the ceiling: "next year, possibly, there may not be an incremental benefit" — the easy cost is gone.	1–2 yrs, then exhausted	**Moderate** Helps margin; cannot repeat forever.

4 Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q1–Q3 CY2023	Restructure: cut the plant network, drop unprofitable products — "we don't want to boil the ocean... fewer, bigger accounts."	**Delivered, visibly.** Sites 15 → 10; label plants six → three; headcount ~3,000 → ~2,600. Volumes fell 15–16% in Q1 CY2023 — the price of pruning, and they said so. Margin rose from ~6% to ~8.5%.	**Delivered**
Q2 CY2023 (Jul 23)	"By 2030 we are targeting **10% EBIT margins**" — from a 6.5% base.	EBIT margin is 8.5% today, four years early. **Ahead of schedule.**	**On track**
Q3 CY2023 (Oct 23)	"Double digit EBITDA and EBIT margin **in a near future**... as soon as possible."	**Delivered, but it took two years and went backwards first** — EBITDA margin fell from ~10.6% (Q4 CY23) to ~5.0% (Q3 CY24) before double digits returned in Q3 CY2025.	**Late, then delivered**
Q4 CY2023 (Feb 24)	blueloop target **silently raised** from "60–65% by 2030" to "**beyond 90%** by 2030... 10% delta every year." Plus: conversions "would be higher than what we have seen."	**Both wrong, and the escalation was never acknowledged.** Adoption was 26% when the 90% target was set; it is 27–30% today — roughly 1–3 points in two and a half years against the 10 a year required. By Oct 2024 management conceded conversions were "below our expectations."	**Missed** Target raised while being missed.
Q4 CY2023 (Feb 24)	Capacity utilisation withheld from this call on, with the reason said out loud: "**by indicating the capacity utilisation, it kind of exposes the overall strategy.**"	The last published figures were 60–62% (Jul 23) and 60–63% (Oct 23) — about two-fifths idle. Disclosure stopped precisely when the number turned awkward and has never resumed across nine subsequent calls, under two managements.	**Withdrawn**
Q1 CY2024 (Apr 24)	The most concrete multi-year commitment in the record: get back to "the **volume scenarios of 2019 or 2020** while keeping the overall margins in mind — that's the goal for the **next two to three years**." Deadline CY2026–27.	**Live now, and split.** On revenue, trailing-twelve-month sales of ₹2,610 cr have just edged past CY2019's ₹2,599 cr — but only via passed-through polymer prices. On *volume*, which is what was promised, still below: CY2025 was under CY2024, which was flat on CY2023, which was 15% under CY2022. One good quarter does not close that.	**Unlikely on volume**
Q2 CY2024 (Jul 24)		**Both broken, one immediately.** The very next quarter was the worst in the dataset — EBITDA ₹31.3 cr, margin	**Missed**

	"Directionally, **H2 should be better than H1** — I would say so." And blueloop "next year... **more than 40% to 50%**."	~5.0%. blueloop in CY2025 came in at 27–30%, not 40–50%.	
Q3 CY2024 (Oct 24)	Strategy openly **reversed**: "things changed this year... we have to clearly focus on maintaining the share of wallet at existing customers."	The 2023 "walk away from low-margin business" thesis was abandoned under demand pressure — restated in Feb 2025 as "*not by design or not by our willingness, but because there is a demand, we need to serve it*" — then re-adopted in 2025 as "sometimes it's a conscious call." The same strategy, twice, in opposite directions. CY2024 margin duly collapsed to 4.7%.	**Reversed**
Q4 CY2024 (Feb 25)	"I can see that now the demand coming back strongly... **we should see some revival**." Export weakness is "a one-off temporary blip."	**Wrong.** Volumes fell year-on-year in Q1, Q2 and Q3 of CY2025; revenue fell 4.7% in both Q2 and Q3. Full-year CY2025 volumes ended below CY2024. No revival came.	**Missed**
Q3 CY2025 (Oct 25)	Asked when volume growth returns: "**Yes, I would say so**." Asked if the December quarter would be better: "**I would say, yes**."	December 2025 was **flat**, not better — ₹623 cr. But volume growth did arrive two quarters later at high single digits. Late, then delivered.	**Late, then delivered**
Q4 CY2025 (Feb 26)	New MD's first call: three priorities — profitable growth, capital discipline, accountability. Refuses all guidance: "we never make any forward-looking statements." Solar to generate "in the second quarter."	The three priorities have been repeated verbatim in both later calls, and margin kept climbing. Solar slipped one quarter — Q2 → "next few months" (May) → live in Q3 (Jul) — disclosed each time.	**Delivered**
Q1 CY2026 (May 26)	Raw-material inflation "will be passed through... **no impact or virtually no impact on our margin**." Same call disclosed a **two-year depreciation error** — buildings depreciated on the reducing-balance basis instead of straight-line — needing an ₹8.8 cr catch-up charge.	**Pass-through kept, and then some:** the next quarter's margin rose 220 basis points straight through the worst of the cost inflation. **The error is a control failure with an awkward history:** that very switch to straight-line was made deliberately in January 2023, and the resulting ₹27.3 cr depreciation reduction was cited on every 2023 call as evidence of recovery. The accounting change that flattered the 2023 turnaround was applied incorrectly for two years. Disclosed and explained unprompted, to their credit.	**Delivered** on pricing **Negative** on control
Q2 CY2026 (Jul 26)	Refused to guide: no run rate, no margin, no capacity figure — and flagged the customer-stockpiling tailwind as temporary before being asked.	Nothing to score yet, but the *behaviour* is scoreable. Handed the best quarter in years, they declined four invitations to extrapolate it — the opposite of the Feb 2025 error.	**Too early** Candour noted.

Narrative drift. At the level of slogans there is almost none. Underneath it, three problems. **One: the strategy physically reversed twice.** Prune unprofitable volume (2023) → abandon that and defend share of wallet (Oct 2024, margin falling to 4.7%) → prune again (2025). The current version is six quarters old and has already bent once when demand got hard. **Two: the blueloop target was escalated while being missed** — 60–65% by 2030, then "beyond 90%" at 26% adoption, then "40–50% next year," against an actual 27–30% that turns out not to be blueloop at all. Raising a goal you are failing, without acknowledging the old one, is the worst mark here. **Three: disclosure narrowed as results improved.** Real capacity utilisation was published in 2023 when it was bad, then withheld from 2024 because it "exposes the overall strategy." Volume is now only "high single digit"; product mix, the labels split, blueloop capex and capacity are all "competitive." A company doing well is telling shareholders less than when it was doing badly.

Against that, three real credits. The margin promise — the one that mattered — was kept and is running early. They admit failure out loud: on blueloop, on the strategy reversal, on the depreciation error, on the market having become "a Red Ocean." And the pattern is clear enough to use: **when they forecast they are optimistic and often wrong; when they refuse to forecast they are reliable.** "Demand coming back strongly," "H2 should be better than H1," "the December quarter will be better" — all followed by the opposite. The July 2026 call contained no forecast at all.

One caveat on continuity itself. The MD, CFO and sales head all left within about twelve months. Dhananjay Salunkhe ran the 2023 restructuring and the 2024 relapse; Jagdish Agarwal was CFO from early 2022 to 1 December 2025. Kamal Taneja became MD on 15 January 2026, Amit Gupta CFO in April 2026. Asked why three senior people left at once: "no person is bigger than the company." The turnaround being celebrated was designed by people who have gone and is narrated by people who arrived after it worked.

5 Bottom line — two verdicts

Durable earning trigger? → MAYBE — the repair landed, the growth engine has not started

The margin repair is real, delivered and largely structural. Management said in 2023 it would walk away from low-margin business and cut cost; the numbers followed — operating margin 4.7% (CY2024) → 8.0% (CY2025) → 10.5% in the June quarter, the first sustained double-digit run in four to five years. Sites went from 15 to 10, the cash cycle from 51 days to 26, borrowings from ₹410 cr to a single ₹145 cr parent loan against ₹395 cr of cash. Free cash flow of ₹184 cr exceeded ₹118 cr of profit, so the earnings are cash. And it is not a raw-material fluke: in Oct 2025 the MD confirmed raw-material benefits are contractually passed straight to customers, which rules out the easiest false explanation.

But the trigger is largely spent, and nothing has replaced it. One: revenue is ₹2,469 cr against ₹2,983 cr three years ago and has been stuck near ₹2,500 cr for seven to eight years, in a market growing 10–12%; management itself warned in Oct 2025 that "next year, possibly, there may not be an incremental benefit" from cost work. **Two:** the one quarter that finally showed volume growth is the least clean in the file — only a third of the 23% was volume, another third was polymer prices passed on, and management volunteered that customers stockpiled ahead of price rises. They refused twice to call ₹750 cr a run rate. **Three:** the designated future has failed to arrive. blueloop has been flat at 27–30% for two years, its target was raised while being missed, its promised premium was retracted, and the figure turns out to count all recyclable products. Capital spent; return absent.

What stops it being a No: volume did turn positive after five years of decline, exports and domestic grew equally so the recovery is broad, plants were last seen running at only ~60% so growth needs no new capital, and there is ₹395 cr of cash plus ₹427 cr of unused limits to buy growth. **What stops it being a Yes:** no capex is announced, capital work-in-progress is down to ₹8 cr, no acquisition is on the radar, the payout is 13% — so the cash neither builds the future nor comes back to shareholders. Meanwhile the stock has doubled to ₹300, meaning the margin repair the market can see is already paid for. **Verify the December-2026 quarter before believing the volume turn.**

Management consistent? → MAYBE — candid and improving, but the record is not as steady as the slogan

The credit is real. The margin promise was kept: 10% EBIT by 2030 looks early at 8.5%, and the "double-digit EBITDA in near future" pledged in Oct 2023 arrived in 2025. The plant network was cut exactly as described. Raw-material costs are passed through as claimed. And they say uncomfortable things out loud — that blueloop has disappointed, that the market is "a Red Ocean," that "the sales has remained flat and there is a slight margin erosion," and, in the best quarter in years, that some of it was customers stockpiling and would not repeat.

Three things stop this being a Yes. The strategy has **physically reversed twice** — prune, then defend share of wallet with margin collapsing to 4.7%, then prune again — and the current version is only six quarters old. The **blueloop target was raised while it was being missed**, from 60–65% to "beyond 90%" to "40–50% next year," against an actual 27–30% that is not even blueloop; escalating a goal you are failing, without acknowledging the previous one, is the most serious mark here. And **disclosure narrowed as results improved**: genuine capacity utilisation was published in 2023 at ~60% and then withdrawn because it "exposes the overall strategy," and has been refused by two successive managements since.

Two blemishes to price in. An **accounting error** — buildings depreciated on the wrong basis for two years, requiring an ₹8.8 cr catch-up in 2026, on the same policy change that had reduced depreciation by ₹27.3 cr in 2023 and was cited then as proof of recovery. And the **parent charge** — about ₹80 cr paid to the Finnish parent in CY2024 for IT and centralised services on ₹2,400 cr of revenue, raised by shareholders at three separate calls and at the AGM, answered each time with a version of "point noted," and unchanged.

The honest summary is a pattern, not a grade. When this management forecasts it is optimistic and frequently wrong; when it refuses to forecast it is dependable and candid. The July 2026 call contained no forecast at all. That is the better version of this company and it is the version currently in charge — but only for two quarters, under an MD and a finance chief who both arrived after the turnaround was already working. **Give it four more quarters before upgrading.**

Sources: Fourteen Huhtamaki India Ltd earnings-call transcripts filed with BSE/NSE and published on the company's investor site, covering every quarter from Q1 CY2023 (call 28 Apr 2023) to Q2 CY2026 (call 27 Jul 2026), sourced from Screener.in; Screener.in financial history (profit & loss, balance sheet, cash flow, ratios, quarterly results, shareholding) as at 3 Aug 2026; Huhtamaki Oyj press release on the Thane real-estate sale (Nov 2023).

A note on the numbers: Screener's quarterly "Sales" line includes other operating revenue (scrap and export incentives) and so reads ₹750 cr for Apr–Jun 2026, while management quotes "net sales" of ₹723 cr for the same quarter. Both are correct on their own basis; where a figure is management's, it is labelled as such. Screener shows the quarter's operating margin as 10%; management reports 10.5%.

Coverage caveat: one Screener concall row (Nov 2018) has a dead transcript link and could not be read; it falls outside the analysis window. No transcripts exist for CY2020–CY2022 because the company held no earnings calls between August 2019 and May 2023.
