Jaiprakash Power Ventures Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: JPPOWER · Report prepared 21 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public financials, annual filings, insolvency-process record and news coverage. This company holds no earnings calls — see Section 2.

1 Snapshot

A 2,220 megawatt (MW) power producer — two coal-fired plants and one hydro plant in Madhya Pradesh and Uttarakhand — with two idle cement grinding units and a captive coal business it has just walked away from. Until 21 May 2026 it was the listed power arm of the collapsed Jaypee group; Adani Power now owns the 24% promoter block.

Measure	Number	What it means in plain words
Market value / share price	₹11,719 cr / ₹17.1	52-week range ₹13.1–₹24.5. The stock moves on ownership news, not earnings.
Ownership of the 24% promoter block	Adani Power, since **21 May 2026**	Bought from bankrupt parent Jaiprakash Associates at **₹18.20 a share**. The stock trades 6% below that.
Insolvency plea against the company itself	**Pending** — ₹511.72 cr	NARCL filed to push JP Power into bankruptcy on 27 Feb 2026. Neither admitted nor dismissed. This is the whole story.
FY26 sales	₹5,563 cr	Up 2% on FY25, still below FY24's ₹6,763 cr. Four years of no growth.
FY26 operating profit / margin	₹1,358 cr / **24%**	EBITDA (profit before interest, tax and depreciation) fell 27%; margin dropped 10 points in a year.
FY26 net profit	₹442 cr	Down 45% from ₹811 cr. Auditors say ₹266 cr of it rests on a tax credit they reject.
Borrowings, 31 Mar 2026	₹3,391 cr	The real good news: down 85% from ₹22,901 cr in FY15. Just 0.27x net worth of ₹12,720 cr.
Disputed claims against it	**~₹15,150 cr**	ICICI recompense ₹5,697 cr, sand-mining demands ₹8,557 cr, guarantee ₹512 cr, UPPCL ₹392 cr. Bigger than the company.
Return on capital employed (ROCE) / on equity (ROE)	6.92% / 3.53%	ROCE = profit per rupee of capital employed. At 7% it fails to cover the ~10.5% it pays on debt: value destruction.

2 Coverage and sources

No concall transcripts were available on Screener — this report is based on a global web deep-dive.

Jaiprakash Power Ventures **holds no earnings conference calls**. Screener's document shelf for JPPOWER carries annual reports (2012–2026), Fitch and CRISIL rating updates and routine exchange announcements — and **zero** concall transcripts or investor presentations. The local transcript store (/tmp/research-company/concall-tracker/jppower/documents/concalls/) is empty. **There is therefore no record anywhere of this management being questioned by analysts.** Every judgement below rests on filings, audited accounts, tribunal orders and press reporting — documents the company controls or that third parties wrote about it, never management answering a hostile question.

Sources actually used. Screener.in/company/JPPOWER — the twelve-year profit-and-loss, quarterly, balance-sheet, cash-flow, ratio and shareholding series behind every number here, and confirmation that no concalls exist. **Company filings** — FY26 annual report (NSE, 4 July 2026); audited FY26 and Q4 FY26 results of 5 May 2026 with the auditor's modified opinion; Q1 FY27 results (21 July 2026); the May 2026 coal-mine surrender approval; 31st AGM outcome (30 July 2026). **Tribunal record** — NCLT Allahabad admitting Jaiprakash Associates (3 June 2024), NCLT approval of the Adani plan (17 March 2026), NCLAT confirmation (May 2026), NARCL's Section 7 petition against JP Power (27 February 2026), IBBI records. **Press** — Business Standard, Business Today, Reuters via TradingView, Moneycontrol, Bar & Bench, InsolvencyTracker, Angel One, Univest (plant load factors), ScanX, Whalesbook, TipRanks. Where the record is silent — and it is silent on a great deal — this report says so.

2b Latest update highlights

Latest update highlights — Q1 FY27 (quarter ended 30 June 2026)

- **The June-quarter jump was NOT volume — it was price and cost per unit.** The company discloses no quarterly generation figures at all, but the Central Electricity Authority publishes station-wise output monthly, and its Jun-2026 report covers exactly Apr–Jun 2026. Gross generation across all three plants was **3,733.93 million units against 3,928.49 a year earlier — down 5.0%** — while revenue rose 12.2%. Nigrie 2,483.05 MU (PLF 86.13% vs 90.09%), Bina 809.08 MU (PLF 74.09% vs 71.88%), Vishnuprayag hydro 441.80 MU vs 546.26. *All three plants ran below the CEA's own targets.* (CEA National Power Portal, 18-column generation report, Jun 2026. The same source's FY26 figures match the company's Annual Report to the decimal — Bina 3,294.20 MU / 75.21%, Nigrie 10,267.50 MU / 88.79% — so this is the company's own output, independently published.)
- **Hydro mix, not efficiency, explains most of the margin swing.** Hydro was 11.8% of the June-quarter generation mix against 2.5% in the March quarter. Hydro carries almost no fuel cost, so cost of materials fell from 77.1% of revenue in Q4 FY26 to **49.7%** in Q1 FY27. (Derived by this report from CEA cumulative data, not a company disclosure.)
- **The parent went bankrupt; the subsidiary did not.** Jaiprakash Associates (JAL), JP Power's promoter, was admitted to the Corporate Insolvency Resolution Process (CIRP — the court-supervised bankruptcy process under India's Insolvency and Bankruptcy Code) by the NCLT (National Company Law Tribunal, the bankruptcy court) at Allahabad on **3 June 2024** on ICICI Bank's petition, owing over ₹57,000 cr. **JP Power itself was never in that process.** Confusing the two is the single most common error made about this stock.
- **Adani won JAL and, with it, JP Power's promoter stake.** Adani Enterprises' ₹15,343 cr resolution plan — picked over Vedanta's nominally larger ₹17,000 cr staggered offer because lenders wanted cash faster — got the letter of intent on **19 Nov 2025**, NCLT approval on **17 Mar 2026** and NCLAT confirmation in **May 2026**. Under it, **Adani Power bought JAL's entire 24% stake in JP Power for ₹2,993.59 cr, effective 21 May 2026** (share purchase agreement 20 May 2026), plus JAL's 180 MW Churk plant for ~₹1,200 cr. JAL now holds nothing.
- **Minority shareholders were not wiped out — and were not bought out either.** JAL's own shareholders suffered 100% capital reduction for zero consideration and delisting. JP Power's did not: it stays listed, the public still owns 58.08%. But the stake was set at exactly 24%, one point under the 25% trigger for a mandatory open offer under SEBI's takeover code — so there was **no exit offer**. Press reports (unconfirmed by either company) suggest Adani may later go to 51%, which *would* force an open offer. Treat that as speculation.
- **A separate insolvency petition against JP Power itself is still live.** NARCL (the government-backed bad-bank) filed a Section 7 petition at NCLT Allahabad on **27 Feb 2026** over ₹511.72 cr, on a corporate guarantee JP Power gave for its parent's borrowings (assigned from SBI). As of the FY26 audit it was **pending admission, with no provision made** and impact called "unascertainable". If admitted, equity could be diluted or extinguished. This is unresolved.
- **Q1 FY27 looked excellent — and the swing is mostly price and rain.** Sales ₹1,776 cr (+12% year-on-year), operating profit ₹759 cr, margin **43%**, net profit ₹469 cr (+69%) — achieved *despite* a ₹193.63 cr exceptional charge for surrendering the Amelia (North) and Bandha North coal mines (assets of ₹314.68 cr), which the board in May 2026 called financially and operationally unviable after coal-policy changes.
- **The audit report is a warning sheet.** Auditors Lodha & Co. LLP issued a **modified opinion** on FY26 flagging six items, including ₹266 cr of tax credit they say should not be recognised, ICICI Bank's **₹5,697 cr recompense demand of 9 Jan 2026** (a clawback of the 2019 debt haircut, disputed), ₹392 cr withheld by UPPCL under appeal at APTEL, and sand-mining demand notices of **₹8,557 cr**, ₹2,217 cr of which is stayed by the Andhra Pradesh High Court.

2c Business mix and capacity

Capacity (2,220 MW total). Jaypee Nigrie supercritical thermal, Madhya Pradesh — **1,320 MW** coal-fired, live since FY15, the profit engine. Jaypee Bina thermal, Madhya Pradesh — **500 MW** coal-fired, live since FY13. Jaypee Vishnuprayag hydro, Uttarakhand — **400 MW** run-of-river, live since Oct 2007, no fuel cost at all.
Plant load factor (PLF — how much of a plant's theoretical maximum output it actually produced; 100% would be flat out all year). FY26: Nigrie **88.8%**, Bina **75.2%**. Both are strong for Indian coal plants, where the fleet average sits nearer 70%. *Vishnuprayag's PLF is not separately disclosed in the public filings we could reach* — hydro output is seasonal by nature, peaking with the June–September monsoon and collapsing in the dry winter quarter.
Contracted versus merchant. Bina and part of Nigrie sell under long-term power purchase agreements (PPAs — fixed multi-year contracts with state distribution companies, mainly Madhya Pradesh's MPPMCL, giving predictable tariffs); the rest is sold **merchant** — on the power exchanges at whatever the daily spot price happens to be. *The company publishes no clean contracted-versus-merchant split*. That gap matters: merchant exposure is exactly what makes the quarterly margin unpredictable.
Revenue split, FY26 (standalone segment disclosure). Power **₹5,564 cr**. Coal **₹817 cr** — almost entirely transferred internally to fuel Nigrie, not sold outside. **Cement grinding: nil. Sand mining: nil.** The two cement grinding units (Nigrie and Bina) **earned no revenue at all in FY26**. Describing this as a "cement" business is not supported by the accounts — this is a pure power company with idle side-assets.
Captive coal is being abandoned. The board approved surrendering Amelia (North) and Bandha North in May 2026, taking a ₹193.63 cr hit in Q1 FY27 and giving up ₹314.68 cr of assets. Nigrie's fuel now comes from linkage and e-auction coal — less control over cost, one fewer lever.

3 Earning-trigger thesis

The trigger is who ends up owning this company, not how well it runs plants

JP Power has already done its operational heavy lifting: debt down 85% from peak, both coal plants at high load factors, cash from operations covering 102% of operating profit in FY26. None of that moves the stock. What moves it is a two-sided ownership question with no settled answer: **Adani at 24% and possibly heading higher on one side, a live insolvency petition against the company on the other.** A minority shareholder here holds an option on a legal outcome, not a claim on an earnings stream.

Trigger	What the public record says	Evidence so far	Time horizon	Strength
Adani goes past 25%, forcing an open offer	Nothing official. Press reports say Adani is "evaluating" 51%; neither company confirms. Crossing 25% triggers a mandatory offer to buy 26% from the public.	Adani paid ₹18.20/share and has installed a whole-time director plus two non-executive nominees, approved at the 30 July 2026 AGM. It behaves like an owner.	Unknowable — 6 months to never	**Medium**
NARCL petition dismissed or settled	₹511.72 cr claim on a parent guarantee, filed 27 Feb 2026, still not admitted. Contested here and at DRT-III Delhi.	Auditors flagged it; no provision; impact "unascertainable". For a shareholder Adani's size, ₹512 cr is small change — but nothing has been announced.	Next 2–4 quarters	**Medium**
ICICI ₹5,697 cr recompense claim defeated	Demand letter 9 Jan 2026 clawing back the 2019 haircut. Company says nothing is payable on cash-flow tests and RBI norms, per legal opinion.	Untested. Against ₹12,720 cr of net worth this is existential if it lands. Auditors would not sign it off clean.	Multi-year litigation	**Weak / binary**
Merchant power prices stay high	Not a promise — a market fact. Exchange spot prices (IEX day-ahead and real-time) ran 18–32% above last year in Q1 FY27.	Real: margin 43% in Q1 FY27 against 8% in Q4 FY26 on similar sales. It cuts both ways, and did so inside one year.	Quarter to quarter	**Strong but unreliable**
Deleveraging keeps lifting profit	Borrowings ₹3,391 cr (Mar 2026) against ₹22,901 cr (Mar 2015); interest ₹2,118 cr down to ₹375 cr a year.	The clearest real trigger — but nearly spent. Interest is now just 28% of operating profit; little left to save.	Largely delivered	**Fading**

4 Management consistency scorecard

Read this first. With no earnings calls, *every* "promise" below is taken from an annual report, a board resolution or an exchange filing — documents the company writes about itself and phrases as it likes. None was made in front of analysts free to push back, and no transcript record exists to catch a story quietly changing. The read is **directional only**. A second limit: **a company with a live insolvency petition against it, a bankrupt former parent and a brand-new controlling shareholder has very little standing to make forward commitments at all** — and to its credit, it has largely stopped trying.

Period	Promised / stated	What happened	Verdict
FY19–FY26 (restructuring)	Cut the debt burden after the 2019 lender restructuring and return to sustained profit.	Delivered, and comprehensively. Borrowings ₹11,149 cr → ₹3,391 cr; interest ₹1,433 cr → ₹375 cr; profitable every year since FY21. Debt is now 0.27x net worth.	**Kept** — the one unambiguous win
FY24–FY26 (operations)	Run the thermal fleet hard; keep load factors high.	Delivered on the plants: Nigrie 88.8% and Bina 75.2% PLF in FY26, both above the national coal fleet average. But high output did not protect profit — FY26 operating profit still fell 27%.	**Kept on volume**, irrelevant to earnings
FY25–FY26 (earnings quality)	Annual reports presented rising profitability; FY25 net profit of ₹811 cr was the peak.	FY26 profit halved to ₹442 cr, and auditors issued a **modified opinion** saying ₹266 cr of that rests on a tax credit that strict accounting would not allow — roughly 60% of the standalone figure. Q4 FY26 was an outright loss.	**Broken** — quality worse than headline
Captive coal (long-standing)	Amelia (North) was presented for years as securing Nigrie's fuel and cutting cost.	Reversed. Board surrendered Amelia (North) and Bandha North in May 2026 as "financially and operationally unviable"; ₹193.63 cr written off, ₹314.68 cr of assets given up. Blamed on coal-policy change — plausible, but a full reversal of a core stated strategy. The cement grinding units, still named in the corporate description, likewise earned **zero revenue in FY26**, as did sand mining.	**Abandoned**
Contingent claims (FY26)	Nothing payable on ICICI's ₹5,697 cr recompense, NARCL's ₹512 cr guarantee or the ₹8,557 cr sand-mining notices; no provisions taken.	Entirely untested. Auditors declined to accept management's position without qualification. Management may be right — but nobody has ever been able to ask them why in public.	**Unverifiable**
Q4 FY26 collapse	No explanation offered anywhere in the public record.	Operating margin went 33% (Sep 25) → 15% (Dec 25) → **8% (Mar 26)** → 43% (Jun 26). Expenses hit ₹1,275 cr on ₹1,386 cr of sales. Weak merchant tariffs and a dry hydro season fit the pattern; no filing confirms it. **This is precisely the question a concall would have answered.**	**Unexplained**

Governance events in this window — none explained to shareholders

- **India Ratings withdrew its ratings on 3 July 2026 at the issuer's own request**, having moved the company to Rating Watch Developing ten weeks earlier. A borrower asking for its rating to be withdrawn mid-watch removes an independent monitor.
- **Multiple independent and non-executive directors resigned between May and July 2026**, alongside a formal Change in Management intimation on 22 May 2026. Board composition changed substantially.
- **Both exchanges levied fines** for an alleged non-compliance (filed 6 May 2026).
- A **corrigendum to the AGM notice and a revised Annual Report** were filed on 7 July 2026, weeks before the 31st AGM on 30 July 2026.

- **The Annual Report contradicts itself.** Note 40 and the Directors' Report table show Vishnuprayag FY26 net saleable energy as 1,589.17 MU — identical to FY25 — while the narrative in the same Directors' Report says 1,515.97 MU. The 73.20 MU gap is the prior year's figure carried forward in error, and it flows through to the stated FY26 total.

There is no forum in which any of this can be questioned. Confirmed four independent ways — Screener, Trendlyne, and the complete BSE and NSE filing lists for 1 Apr–21 Aug 2026 — that no earnings call was held for either Q4 FY26 or Q1 FY27, and none has ever been held. The company's investor-presentation page was last updated in **August 2022**.

A caution for anyone researching this company: several aggregator sites publish what reads like management commentary on these results — phrases such as “driven by operational efficiencies” and “reflecting strong cost control”. No such statements exist. They are machine-generated inference layered on the bare filing, and none should be treated as anything management said.

5 Bottom line

EARNING TRIGGER: PRESENT — but it is a legal event, not a business one

There is a real trigger here and it is worth naming honestly: Adani Power paid ₹2,993.59 cr — ₹18.20 a share — for 24% of this company on 21 May 2026, installed its own directors, and the stock trades *below* that price. If Adani moves past 25%, SEBI's takeover code forces an open offer to the public, and a ₹512 cr guarantee claim that currently hangs over the company is trivial for a buyer of that size to settle. That is a genuine, identifiable, dateable catalyst. It is also the **only** one that matters. The operating story — 2,220 MW running at 89% and 75% load factors, debt cut 85% from its peak, ₹1,293 cr of free cash flow in FY26 — is a finished job, not a growth engine: sales have gone ₹5,787 cr, ₹6,763 cr, ₹5,462 cr, ₹5,563 cr across four years and ROCE of 6.92% does not clear the roughly 10.5% the company pays for its own debt. Anyone buying this for the plants is buying slow, respectable value destruction. The honest thesis is an option on a corporate-control event, and should be sized like one.

MANAGEMENT CONSISTENCY: CANNOT BE VERIFIED — and what is verifiable has broken

This company has never held an earnings call. Not one transcript exists, so there is no instance on record of this management being asked a difficult question and having to answer it. That caps how far anyone should trust the narrative. But the gap is not the worst of it — where the record *can* be checked, it has moved against the company. Amelia (North), presented for years as Nigrie's fuel security, was surrendered in May 2026 as unviable at a cost of ₹193.63 cr. The cement grinding units, still named in the corporate description, earned **nothing** in FY26. FY26 profit halved and auditors issued a modified opinion saying ₹266 cr of it should not have been recognised, alongside roughly ₹15,150 cr of disputed claims — more than the entire market value — carrying no provision. And the year's most important operating question — why margin fell to 8% in the March 2026 quarter and rebounded to 43% three months later — has **no public answer at all**. Deleveraging was executed well and deserves credit; on everything else the disclosure is thin, the reversals are real and the accounting is contested. Own this for the Adani angle if at all, keep it small, and remember the NARCL petition is still sitting undecided at the NCLT.
