Venus Remedies Ltd — Concall Tracker

Research-driven injectable-medicines maker · Panchkula (Chandigarh) · Screener ticker VENUSREM · BSE 526953 · Report date 11 Jul 2026

Coverage note: No earnings-call (concall) transcripts are published for Venus Remedies on Screener.in — the company does not appear to hold recorded analyst calls. This report is therefore built from a **global web deep-dive** (results press releases, company investor pages, and credible financial media), not from concall transcripts. Read the "promised-vs-delivered" section with that limit in mind: we judge management from the public record, which is thinner than a run of quarterly calls.

1. Snapshot

What the business does: Venus Remedies makes **injectable medicines** (drugs given by injection/drip rather than tablets) — mainly antibiotics, fixed-dose antibiotic combinations, and increasingly higher-value **cancer (oncology) injectables**. It runs its own drug-research arm (Venus Medicine Research Centre) that invents new antibiotics. More than 70% of sales come from **exports** to 80-plus countries.

Number (FY26, year to Mar 2026)	What it means in plain words
Market value ~Rs 2,298 crore	What the whole company is worth on the stock market today.
Revenue Rs 769 crore (up ~18% on the year)	Total sales for the year — grew by roughly a fifth, a solid step up.
Net profit Rs 103 crore (up ~127%)	Final profit after all costs and tax — more than doubled versus last year's Rs 45 crore.
Operating margin 19% (was 11%)	Out of every Rs 100 of sales, Rs 19 is core operating profit — up sharply from Rs 11, the single biggest reason profit jumped.
Debt ~Rs 12 crore; cash & investments > Rs 250 crore	Borrowings are effectively nil (were Rs 319 crore a decade ago); the company now sits on far more cash than debt.
ROCE 20%, ROE 15.5%, P/E ~23	Return on capital is healthy (20 paise of profit per rupee of capital); the share trades at ~23x yearly profit — not cheap.

2. Concall coverage

No concall transcripts were available on Screener — this report is based on a global web deep-dive. Sources used: Venus Remedies FY26 results releases (Business Upturn, ScanX, MarketsMojo, Trade Brains); US FDA QIDP announcement coverage (Business Standard, Pharmabiz, BW Healthcare); investor write-ups (91Capital, CompoundingAI Substack); and the company's own investor-relations pages. Coverage spans roughly the last 3 financial years (FY24–FY26) of public results and announcements.

Latest update highlights — Q4 & full-year FY26 (results reported May 2026)

- **Record quarter.** Q4 FY26 sales Rs 259 crore (up ~33% on the year) — the highest three-month sales in the company's history. Simply put, the business sold more in this quarter than ever before.
- **Profit more than doubled.** Q4 net profit Rs 47.5 crore, up 126% from Rs 21 crore a year earlier. The core operating margin jumped to 24.4% from 14.9% — nearly 10 percentage points more profit on each Rs 100 of sales.
- **First dividend in 13 years.** Board proposed Rs 10 per share — a signal management now feels financially secure enough to return cash, after years of paying down debt.
- **New-drug milestone.** The US drug regulator (FDA) granted its experimental antibiotic **VRP-034** a special "QIDP" status (explained below), a step that can speed up approval and add 5 extra years of market exclusivity — a promising but still-unapproved asset.
- **Tone:** confident. Management framed FY26 as the pay-off of a multi-year turnaround (debt cleared, richer product mix, more export approvals).

Caution on the numbers: one investor write-up flagged that FY26 profit included roughly **Rs 23 crore of one-off gains**, so the "normal" underlying margin is somewhat lower than the headline 19–24% suggests.

Business mix & capacity (quick facts)

- **Domestic vs export:** Exports are **more than 70%** of revenue (80-plus countries incl. UK, Germany, Australia, Saudi Arabia); domestic India is under ~30%. Plainly: this is mainly an export business, so it earns in foreign currencies and depends on overseas approvals.
- **Capacity:** Exact plant-utilization % is **not disclosed**. Management has said its specialised freeze-drying (lyophilisation — a way of making stable injectable powders) line currently serves only about **half** the demand it sees, and it is expanding that capacity; a new 132,000 sq ft global fulfilment centre was opened to supply 100-plus countries. Read: there is clear room to grow output, and capex is going into it.

3. Earning trigger thesis

The headline driver: Venus has shifted its sales mix toward **higher-value products** (oncology and specialty injectables) and won a steady stream of **new export approvals** (its 27th international manufacturing licence, first Saudi approval for the cancer drug Plerixafor, institutional supply wins with UNICEF/PAHO). At the same time it cleared almost all its debt. Together these turned a low-margin, indebted maker into a debt-free business earning far fatter margins — which is exactly why FY26 profit more than doubled on only ~18% higher sales. On top of this proven turnaround sits **optionality** from the in-house antibiotic pipeline (VRP-034), which could be large if it clears trials and is licensed out, but earns nothing today.

Trigger	What the record says	Evidence so far	Time horizon	Strength
Richer product mix (oncology + specialty injectables)	Deliberate shift to higher-margin drugs	Operating margin 11% → 19% (FY26), 24% in Q4; profit doubled on modest sales growth	Playing out now	**Strong** — visible in the numbers (but partly flattered by ~Rs 23 cr one-off)
Export approvals into new markets	27th GMP licence; Saudi Plerixafor; CIS/Ukraine, 80+ countries	Exports >70% of sales; new authorisations keep landing	Ongoing	**Moderate–Strong** — steady flow, but lumpy and approval-dependent
Debt-free balance sheet funding growth	Cut borrowings from Rs 319 cr to ~nil; >Rs 250 cr cash	Interest cost now zero; operating cash Rs 151 cr > profit	Done	**Strong** — fully delivered, real cash generation
Novel antibiotic VRP-034 (new-drug pipeline)	US FDA QIDP status; targets drug-resistant bloodstream infections with less kidney toxicity	Regulatory designation only — not yet approved or earning	Multi-year / uncertain	**Unproven** — genuine upside option, zero revenue today

4. Management consistency scorecard

Period	What was said / set out	What actually happened	Verdict
FY21–FY25	Pay down heavy debt and fix the balance sheet	Borrowings cut from Rs 319 cr (FY15) / Rs 216 cr (FY20) to ~zero by FY25; interest cost eliminated	**Delivered**
FY24–FY26	Grow exports and add international GMP approvals	Reached 27th GMP approval; new-market entries (Saudi, CIS); exports >70% of sales	**Delivered**
FY24–FY26	Improve profitability via richer mix	Operating margin 11% → 19%; profit doubled in FY26	**Delivered** (some one-off help)
Multi-year	Build a novel-antibiotic research pipeline	VRP-034 advanced through FDA designations (QIDP); still pre-approval	**Too-early**
FY26	Return cash to shareholders once secure	First dividend in 13 years (Rs 10/share) proposed	**Delivered**

Narrative drift: The story has stayed **steady and coherent** for years — deleverage, expand exports, move up the value chain, keep an R&D optionality on the side — and management has largely done what it set out to do, capped by the first dividend in over a decade. The main honesty caveat is external, not managerial: there are **no concalls** to pin quarter-by-quarter promises against, and FY26's standout profit was helped by ~Rs 23 crore of one-off gains, so investors should not simply annualise the peak quarter.

5. Bottom line — two verdicts

Durable earning trigger? → YES

There is a concrete, still-live driver that is visibly playing out: a shift to higher-margin oncology/specialty injectables plus a steady stream of export approvals, all riding on a now debt-free balance sheet with strong cash generation (operating cash Rs 151 crore). That is real and proven in the FY26 numbers — not a promise. It is a YES rather than a slam-dunk only because FY26 was flattered by ~Rs 23 crore of one-offs and the biggest blue-sky piece (VRP-034) earns nothing yet, so the sustainable margin likely sits a notch below the headline.

Management consistent? → YES

Across the last several years management set out to clear debt, widen exports, lift margins and eventually pay a dividend — and delivered on all four. The strategic story has not drifted; it has compounded. The one qualifier is structural: with no concalls on record, this consistency read rests on the public results and announcements rather than on tracking management's own quarterly guidance.
