Asahi India Glass Ltd

Concall tracker · Q2 2027 · 11 Nov 2026

1. Snapshot

India's biggest car-glass maker, with about 80% of the passenger-car glass market (windshields, side and back windows, sunroof and head-up display glass), backed by Japan's AGC and Maruti Suzuki. It also makes float glass for buildings (about a quarter of the value-added architectural glass market) plus windows and glass repair services. It earns from rising car output and richer glass per car, and from building-glass prices.

Number	Value	What it means
Market cap	Rs 27,879 cr	A large company, valued at about 50 times last 12 months' profit. The market already expects a lot.
Q2 FY27 total income	Rs 1,591 cr	Best quarter ever, up about two-fifths on a year ago.
Q2 FY27 EBITDA margin	22.1%	Up from 17.1% a year ago; keeps about 22 rupees in a hundred before interest and depreciation.
Q2 FY27 net profit	Rs 167 cr	Almost three times a year ago, when a float furnace was shut for repair.
Float glass segment revenue	Rs 608 cr	Up nearly three-fifths; its profit more than tripled.
Borrowings (Sep 2026)	Rs 2,158 cr	Down from Rs 2,631 cr in March 2025 after a share sale (QIP) in Sep 2025.
ROCE	about 11%	Middling, held down by heavy recent plant spending.

2. Concall coverage

No concall transcripts were available on Screener; Asahi India Glass does not hold quarterly earnings calls. This report is based on a global web deep-dive: the Q2 FY27 press release and investor presentation filed with NSE on 3 Nov 2026, Screener's financial tables, the FY25 annual report, and news on the Soniyana float plant and the glass minimum import price.

Quarter	Date	Transcript read?
Q2 FY27 press release and investor presentation	3 Nov 2026	Yes, read in full
FY25 annual report and news (Soniyana plant, QIP, import price)	2025-2026	Yes, skimmed
Earnings call transcripts	n/a	None held

Latest concall highlights — Q2 FY27 results (3 Nov 2026, press release and presentation)

- Best quarter ever: income up about two-fifths, EBITDA up about three-quarters, net profit almost tripled.
- Car glass sales up about a third on strong car demand, and the company supported 12 new car launches in the quarter.
- Float glass income up nearly three-fifths: the Roorkee furnace is back at full output after last year's repair, the new Soniyana (Rajasthan) furnace is running, and the government's minimum import price on float glass is shielding prices.
- Commissioned a third phase of tempered glass at Patan and more laminated (windshield) capacity at Chennai.
- The chairman flagged higher energy, logistics and wage costs and said the car glass business has room to get more efficient.

Business mix & capacity

- Domestic vs export: overwhelmingly domestic; exports are a small, unquantified share (first exports to Europe mentioned in its history).

- Capacity: three float furnaces totalling 2,150 tonnes a day (Taloja 550, Roorkee 800, Soniyana 800); car glass capacity of over 10 million laminated pieces and 7.6 million tempered sets. The Roorkee furnace is at full capacity; no group utilization figure given.

3. Earning trigger thesis

Two drivers. In car glass, Indian cars are getting bigger and fancier (SUVs, sunroofs, acoustic and head-up display glass) and Asahi supplies most of them, so glass value per car keeps climbing. In building glass, the big new Soniyana furnace has added capacity just as the government set a minimum import price that stops cheap imports from undercutting prices. Both showed up in a record Q2. The risk is that the float side leans on a government price floor and on energy costs.

Trigger	What management said	Evidence so far	Time horizon	Strength
Car glass value per car	Benefits from 'growth and premiumization' of cars (Nov 2026)	Car glass revenue up about a third; 12 new models	Ongoing	Strong
Soniyana float plant and Roorkee back at full output	Plants running; F2 at full capacity (Nov 2026)	Float glass profit more than tripled	Now	Strong
Minimum import price on float glass	Thanks government for a 'fair Minimum Import Price' (Nov 2026)	Better float realisations	Depends on policy	Moderate: policy can change
New Patan and Chennai lines	Commissioned this quarter (Nov 2026)	Still ramping, weighed on car-glass margin	FY27-FY28	Moderate

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	Borrowings down from Rs 2,631 cr (Mar 2025) to Rs 2,158 cr after the Sep 2025 QIP; interest down about a quarter in Q2 (presentation).
New business	No	Nothing new; sunroof and head-up display glass are existing lines.
Margin up	Yes	EBITDA margin 22.1% against 17.1%, from 'better product mix' and full-capacity float output (press release).
New management	No	Sanjay Labroo remains Chairman and MD.
New capacity	Yes	'This quarter we commissioned our Phase III tempered operations at Patan and expanded our laminated capacities at Chennai' (3 Nov 2026).
Big orders	No	No order book disclosed.
Turnaround	No	Profitable throughout; last year was dented by a furnace repair, not a loss.
Promoter buying	No	Nothing stated.

Single concrete driver: Richer glass in every new Indian car plus a full float-glass line-up (new Soniyana furnace, Roorkee back from repair) selling under a government import price floor.

3c. Margin bridge

EBITDA margin rose to 22.1% from 17.1% a year ago. The float business gained most: the Roorkee furnace was shut for a cold repair last year and is now at full output, Soniyana is running, realisations improved with mix and the import price floor. Car-glass margin slipped from Q1 on logistics, wage and consumable costs and new lines still ramping. The furnace effect is one-off in its year-on-year size, but the higher run rate looks lasting (lasting).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
2024	Soniyana float plant by end of calendar 2025	Commercial operations from 25 Mar 2025, early	Delivered
FY25-FY26	Roorkee furnace cold repair, then back to full output	Done; at full capacity in Q2 FY27	Delivered
FY26	Cut debt after the heaviest capex years	Borrowings fell after the QIP	Delivered
FY26-FY27	Patan Phase 3 and Chennai laminated expansion	Commissioned in Q2 FY27	Delivered

With no calls, the record comes from filings. The story of value addition, integration and capacity built ahead of demand has stayed the same for years, and the big projects (Soniyana, Roorkee repair, Patan, Chennai) arrived as said. The company gives no numerical guidance, which makes promises hard to hold it to.

5. Bottom line

Durable earning trigger? → YES

Two live drivers are already in the numbers: premium glass in new cars and a fully running float-glass base under an import price floor. The float part depends partly on government policy and energy costs.

Management consistent? → YES

Projects arrived on or ahead of time and debt came down as planned. The caveat: no calls and no guidance, so there's less to test them against.

6. Checkpoints for next quarter

- EBITDA margin stays above twenty percent in the Dec quarter
- Car-glass margin recovers as Patan and Chennai lines ramp
- Float glass minimum import price stays in place
