

Jubilant Ingrevia Ltd

Concall Tracker · Filed under Q1 2027 · Latest concall read: Q4 & FY26 (call held 26 May 2026)
Ticker: JUBLINGREA (BSE 543271) · A Jubilant Bhartia Group company

What the business does (in one line): Jubilant Ingrevia is a chemicals maker with three legs — (1) **Specialty Chemicals** (pyridine and its derivatives, fine chemicals, diketene, plus a fast-growing CDMO = Contract Development & Manufacturing business, where it makes bespoke molecules for pharma, agro, semiconductor and personal-care clients); (2) **Nutrition & Health** (Vitamin B3 / niacinamide, Vitamin B4 / choline, and human-nutrition premixes); and (3) **Chemical Intermediates** ("acetyls" — bulk chemicals like acetic anhydride and ethyl acetate). It earns money by selling these into drug, crop-protection, food, cosmetics and industrial customers worldwide, and is the world's largest pyridine producer outside China.

1. Snapshot

Metric	Value	Plain-English read
Market cap	₹11,561 cr	Total value the market puts on all its shares (~US\$1.4 bn).
FY26 revenue	₹4,138 cr	Total sales for the year ended Mar 2026, up ~5% on FY25 (₹3,941 cr). Headline sales have been broadly flat for three years.
FY26 net profit	₹268 cr	Profit after all costs and tax — roughly flat vs FY25 (₹263 cr), but up sharply from the FY24 trough (₹162 cr).
Operating margin (FY26)	~11%	About 11 paise of operating profit per ₹1 of sales at company level; the specialty arm alone earns ~27%.
Net debt / EBITDA	0.99x	Borrowings are about one year of operating profit — a low, comfortable debt load (down from 1.36x two years ago).
ROCE	12.4%	Return on capital employed — modest, held back by heavy new plants not yet fully used.
P/E	33.5x	Investors pay ₹33.5 for every ₹1 of yearly profit — a rich multiple that is clearly pricing in the growth story, not today's earnings.

2. Concall coverage

Screener carries **23 transcripts spanning Jun 2021 → May 2026** (roughly 5 years of calls). This is a first ("no-prior") report, so the multi-year narrative was reconstructed by deep-reading the latest call in full and reviewing the key milestone calls below; quarter-by-quarter numbers were cross-checked against the financial tables.

Call	Date	Read?	Why it matters
Q4 & FY26	26 May 2026	Full ★	Latest call — freshest signal (see box below).
Q4 & FY25	13 May 2025	Full	Backstory: cost-savings delivery, specialty EBITDA up ~70%, net-debt fall.
Q2 FY25	22 Oct 2024	Full (key pages)	The \$300 m / 5-year agro-CDMO contract signing and the "Pinnacle 345" vision statement.
Jun 2021 → Feb 2026 (20 more calls)	2021–2026	Skimmed / cross-checked vs financials	Carried forward as backstory for the trigger and consistency reads.

2b. Latest concall highlights — Q4 & FY26 (call 26 May 2026) ★

- **Best quarter in over 3 years.** Q4 revenue ₹1,179 cr — highest in 14 quarters, up 12% year-on-year on 10% volume growth. EBITDA (operating profit) ₹172 cr, up 11% YoY and 26% over the prior quarter; net profit ₹86 cr, up 17% YoY and 84% QoQ. *Read: both sales and profit turned firmly up after a soft patch.*
- **Specialty Chemicals held its premium margin.** Segment revenue ₹516 cr (up 13% QoQ) with EBITDA margin at 27% — a level management has now sustained for six straight quarters. *Read: the shift toward higher-value products is sticking, not a one-off.*
- **The big agro-CDMO contract went live.** The ~\$300 m / 5-year deal (~\$60 m a year) started shipping in March 2026 as promised; a new agro-CDMO facility was dispatched and the Bharuch CDMO plant was commissioned in a record 14 months and cleared a US-FDA audit. *Read: the flagship growth project is now earning, not just a promise.*
- **Two bolt-ons for Nutrition.** Nutrition revenue jumped 21% YoY (₹230 cr), led by niacinamide (Vitamin B3) into cosmetics and choline exports to Europe; the company completed the **Remidex Pharma acquisition** to build a human-nutrition premix business. *Read: management is buying capability to move up the value chain.*

- **Tone: confident and specific.** FY27 called a "pivotal year" with growth to accelerate "starting Q1 FY27 itself"; management reiterated an aspiration of $\geq 20\%$ EBITDA growth per year and ₹400–500 cr annual capex, funded internally. Dividend of ₹5/share (500%) declared for FY26.

2c. Business mix & capacity (quick glance). Domestic vs exports: international sales have risen to $\sim 45\%$ of revenue (from $\sim 34\%$ a year earlier), so roughly **domestic $\sim 55\%$ / exports $\sim 45\%$** , with the fastest new demand coming from Japan, Korea and South-East Asia (read: exports are now nearly half the business and growing). **Capacity:** the core pyridine/picoline plants ($\sim 50,000$ tonnes) run at **90%+ utilization** — very tight, with little headroom, versus Chinese rivals at 30–40% (read: its flagship product line is already close to full and it out-runs China on cost). The newer cGMP Vitamin B3 (niacinamide) plant is still ramping (~ 40 – 50% of target volumes expected in FY27), and the Gajraula multi-purpose CDMO plant is under construction, due to start production in Q4 FY27. A single company-wide utilization figure was not disclosed.

3. Earning-trigger thesis ★

The core driver management keeps pointing to is a deliberate **shift of the business mix toward higher-margin Specialty Chemicals and Nutrition — with a fast-scaling CDMO (custom-manufacturing) engine at its heart** — all wrapped in the "Pinnacle 345" vision announced in 2024: *3x revenue and 4x EBITDA in five years* (targeting FY30). Specialty + Nutrition now contribute $\sim 85\%$ of group EBITDA (up from $\sim 73\%$ two years ago), specialty EBITDA has roughly doubled in two years, and group EBITDA is up $\sim 33\%$ over the same span despite flat prices — early proof the profit engine is real, even while headline revenue stays muted because the old "acetyls" (bulk chemicals) leg shrank.

Trigger	What management said	Evidence so far	Horizon	Strength
CDMO ramp (custom molecules for pharma / agro / semicon / personal care)	Pipeline of 100+ opportunities ($\sim ₹3,500$ cr potential), 20+ confirmed molecules; pharma CDMO to grow 3–4x; growing 30–40%/yr.	\$300 m agro contract now shipping (Mar 2026); Bharuch CDMO plant live; pharma pipeline up 3x in 2 yrs; innovators now $\sim 1/3$ of pipeline.	Medium–long (FY27 onward; pharma is 4–6 yr)	Strong — concrete contracts + capex behind it, ramp now visible.
Specialty mix / margin (pyridine, fine chemicals, diketene)	Sustainable 23–25% specialty EBITDA margin; world #1 in pyridine ex-China; China+1 tailwind.	27% margin held 6 quarters; specialty EBITDA $\sim$ doubled in 2 yrs; pyridine plants at 90%+ use.	Now / ongoing	Strong — delivered and durable.
Nutrition scale-up (Vit B3/niacinamide, choline, human-nutrition premixes)	Take Nutrition to 2–2.5x in 5 yrs; lift margin from $\sim 14\%$ to 16–18%; Remidex acquisition to enter premixes.	Nutrition +21% YoY in Q4; new B3 plant ramping; Remidex closed. Margin still $\sim 14\%$ (below target).	Medium	Moderate — growing, but margin goal not yet hit.
Acetyls cyclical recovery (chemical intermediates)	Cycle near bottom; European force-majeure + firming acetic-acid prices set a favourable pricing outlook.	Chem-Intermediates Q4 +15% YoY; prices firming — but this is a commodity cycle, not a structural lever.	Short (cyclical)	Moderate — real near-term tailwind, but cyclical / not durable.

4. Management consistency scorecard

Period / promise	What was promised	What actually happened	Verdict
FY24–FY26: profit mix shift (Pinnacle 345)	Grow EBITDA faster than revenue; lift specialty+nutrition to bulk of profit.	Group EBITDA +33% in 2 yrs; specialty EBITDA $\sim$ doubled; specialty+nutrition $\sim 85\%$ of EBITDA. Delivered.	Delivered
Cost savings (Surge / Lean)	₹120 cr annual savings, then a Phase-II of ₹100–150 cr more.	₹120 cr achieved; ₹120 cr lean savings cited again in FY26. Delivered.	Delivered
Balance-sheet discipline	Fund ₹400–500 cr/yr capex internally, keep debt low.	Net debt/EBITDA fell 1.36x $\rightarrow$ 1.18x $\rightarrow$ 0.99x; net debt down 11% in FY26.	Delivered
\$300 m agro-CDMO contract (signed Oct 2024)	Commercial production/shipping to start early FY27.	Started shipping March 2026 as promised; full-year volume ramp still being firmed up with the client.	Partly / on-track
"3x revenue" (of Pinnacle 345)	Triple revenue within 5 years (by $\sim$ FY29/30).	Headline revenue flat 3 yrs (₹4.0–4.1k cr) as acetyls/pricing stayed weak; management now says the target may need "4 more years". Candidly flagged.	Missed / stretched
Nutrition margin to 16–18%	Lift from $\sim 14\%$ to 16–18% steady-state.	Still $\sim 14\%$ in FY26; new plant + premixes meant to close the gap.	Too-early
Semiconductor chemicals	New long-term growth vector (flagged since FY25).	Still "small volumes, slow ramp"; $\sim$ a dozen projects, Japan traction — honest that it is early.	Too-early

Narrative drift: Very low. For 2+ years management has told the *same* story — Pinnacle 345, CDMO, the specialty/nutrition mix shift, and cost savings — and backed it with growing evidence quarter after quarter. They refuse to give quarterly guidance and stick to a steady "≥20% EBITDA growth" aspiration. The one genuine walk-back is the **"3x revenue" timeline**: because bulk-chemical prices stayed weak far longer than expected, the revenue leg of the 5-year target is clearly slipping — and, to their credit, management says so openly rather than burying it. The *profit* half of the thesis (4x EBITDA) is tracking; the *revenue* half is not.

5. Bottom line — two verdicts

Is there a durable earning trigger? → YES

The mix-shift-plus-CDMO engine is concrete, funded (₹400–500 cr/yr capex) and already showing up in the numbers: specialty EBITDA doubled in two years, 27% specialty margins held for six quarters, a real \$300 m contract now shipping, and group EBITDA up a third despite flat prices. It has several durable legs (specialty margin, CDMO, nutrition) plus one cyclical kicker (acetyls). The trigger is real and playing out on *profitability* — the main caveat is that headline *revenue* growth still has to arrive.

Has management been consistent? → YES

The strategy has not drifted in over two years, and management has delivered on the things most in its control — EBITDA growth, specialty margins, cost savings and debt reduction — while executing plants (Bharuch CDMO in 14 months, US-FDA cleared) on time. The honest blemish is the "3x revenue" target, which is stretching past its original 5-year clock because of weak bulk-chemical pricing; management flags this openly rather than hiding it. Steady story + strong execution + candour on the miss earns a Yes, but investors should watch whether revenue finally inflects in FY27 and whether the \$300 m contract and nutrition margins scale as promised.
