Sukhjit Starch & Chemicals Ltd

Grinds maize into starch, liquid glucose, dextrose, sorbitol and other derivatives at four plants in Punjab, Uttar Pradesh, Maharashtra and Madhya Pradesh, selling to food, FMCG, pharma, paper and textile makers.

Concall-tracker report, filed under Q2-2027. Prepared 11 Nov 2026.

1. Snapshot

Number	Value	Plain read
Market cap	Rs 432 cr	A small company by market value
Q2 FY27 revenue	Rs 408 cr	Up about 30% on a weak quarter a year ago
Q2 FY27 operating margin	8%	Back up from 5% a year ago, as maize got cheaper
Q2 FY27 profit	Rs 16 cr	Up from Rs 4 cr a year ago
ROCE	5.6%	Low return on capital over the last year, after the weak FY26
Book value	Rs 198 a share	Shares trade below book value

2. Concall coverage

Ten call transcripts read, from Jun 2023 to Nov 2025. The company has held no earnings call since Nov 2025, so there are none for Q3 FY26 to Q2 FY27. The latest quarter comes from the results filing as reported by multibagg.ai, univest and arthneeti (23 Oct 2026) and the Screener numbers.

Quarter	Date	Transcript read?
Q4 FY23	Jun 2023	Yes
Q2 FY24	Nov 2023	Yes
Q4 FY24	Jun 2024	Yes
Q1 FY25	Aug 2024	Yes
Q2 FY25	Nov 2024	Yes
Q4 FY25	Jun 2025	Yes
Q1 FY26	Aug 2025	Yes
Q2 FY26	13 Nov 2025	Yes, read in full
Q3 FY26 to Q2 FY27	-	No call held

Latest concall highlights: Latest update highlights: Q2 FY27 results (23 Oct 2026, no call)

- Revenue Rs 408 cr, up about 30% on a year ago; profit Rs 16 cr vs Rs 4 cr.
- Operating margin 8% for the second quarter running, back to FY25 levels after the FY26 squeeze.
- In the last call (Nov 2025) management expected margins to improve as maize prices fell (Rs 22-23/kg to Rs 19-20) and said exports should restart because Indian maize had become globally competitive.
- No guidance or project update since then.

Business mix and capacity

- Mostly domestic; exports had stopped because Indian maize was too costly, and were expected to restart from late FY26. Split not disclosed.

- Plants ran at about 80% in 2023; the 2,000 tonnes-a-day expansion was scaled back to value-added lines only, with one product left to commission by end FY26.

3. Earning trigger thesis

There is no clean earnings trigger. Profit follows the maize price, which follows government ethanol policy. The margin recovery this year is the cycle turning, as management predicted in Nov 2025, not a new product or plant.

Trigger	What management said	Evidence so far	Time horizon	Strength
Cheaper maize	Margins to improve as maize prices fall	Margin 5% to 8%	Now	Moderate: cyclical
Value-added products	Prioritise derivatives over bulk starch	No figures shared	FY26-FY27	Weak
Exports restart	Should pick up from Q3 FY26	Not confirmed	Unclear	Unproven

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	-
New business	No	-
Margin up	Yes	Expected improvement as maize softened (Nov 2025)
New management	No	-
New capacity	No	Expansion scaled back; one value-added product due by end FY26 (Aug 2025)
Big orders	No	-
Turnaround	Yes	Expected sequential improvement after a weak FY26 (Nov 2025)
Promoter buying	No	-

Single concrete driver: Cheaper maize after a bigger crop and rice being diverted to ethanol has restored margins.

3c. Margin bridge

Margin went from about 5% a year ago to 8%. Maize got cheaper as the crop grew and the government gave rice to ethanol makers, and demand came back after the GST cut. This depends on the crop and ethanol policy. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Jun 2023	Capacity from 1,600 to 2,000 tonnes a day in 24 months	Expansion scaled back to value-added lines	Partly
Nov 2024	Partial commissioning from Q3 FY25	Some lines came up	Partly

Aug 2025	Last value-added product by end FY26	Not updated	Too-early
Nov 2025	Margins to improve from here	8% by Q1-Q2 FY27	Delivered
Nov 2025	Exports to pick up	Not reported	Too-early

The story shifted from volume growth to protecting margin when maize got expensive. The company then stopped holding calls, so there's no way to check the expansion or exports.

5. Bottom line

Durable earning trigger? NO

The profit recovery is the maize cycle turning. There's no named plant, product or customer driving it.

Management consistent? MAYBE

Management called the margin recovery right, but scaled back the expansion and went quiet after Nov 2025.

> **6. Checkpoints for next quarter**
>
> - Operating margin holds at 8% or better
> - Company resumes earnings calls or gives an expansion update
> - Exports show up in results
