GE Vernova T&D India Ltd: Concall Tracker

Ticker GVT&D (NSE) / 522275 (BSE), formerly GE T&D India | Quarter folder Q1-2027 | Builds on the Q4-2026 report | Newest call read: Q1 FY27 (7 Aug 2026)

Two questions: is there a durable **earning trigger**, and has **management been consistent** about it? This edition continues the Q4-2026 report and deep-reads only the new Q1 FY27 call.

Plain-word key: T&D = transmission and distribution, the kit that carries power from plants to cities. GIS = gas-insulated switchgear, compact high-voltage switching gear. HVDC = high-voltage direct current, used to move big blocks of power over long distances. TBCB = tariff-based competitive bidding, the auction route through which private developers win new power lines and then order equipment. RPT = related-party transaction, here orders from other GE Vernova group companies, which need shareholder approval above a size.

1. Snapshot

What it does: it makes the heavy electrical equipment that carries power across the grid: big transformers, high-voltage switchgear and grid-control systems. Customers are private grid developers, Power Grid and other utilities in India, and GE Vernova group companies abroad that buy its exports.

Measure	Figure	Plain-English read
Market value	~Rs 1,03,000 cr	What the whole company is worth on the market (Screener, share ~Rs 4,018).
Revenue, Q1 FY27 (Apr–Jun 2026)	Rs 1,840 cr (+38%)	Sales for the quarter, up well over a third on last year as factories churn through the order pile.
Operating margin (EBITDA), Q1 FY27	25.1%	About Rs 25 of operating profit per Rs 100 of sales. Down from ~27% for FY26 but inside the "mid-20s" they guided.
Profit before tax, Q1 FY27	Rs 490 cr (vs ~Rs 390 cr)	Profit grew about a quarter, slower than sales because of the margin dip.
New orders, Q1 FY27	Rs 1,140 cr (–30%)	Fresh orders fell sharply, mostly because few new power-line auctions were decided in Jan–Mar.
Order backlog (30 Jun 2026)	Rs 20,930 cr	Orders in hand, down 2.5% from the March record but still about three years of sales.
Cash	Rs 2,930 cr, zero debt	Plenty of cash; about Rs 1,000 cr is set for capacity expansion and ~Rs 250 cr for a dividend.
Valuation (P/E)	~70x	You pay about Rs 70 for each Rs 1 of yearly profit. Expensive; the price assumes the boom lasts.

2. Concall coverage

Call(s)	Date	Transcript read?
Q1 FY24 → Q3 FY26 (11 calls)	Aug 2023 – Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary call)	19 May 2026	Carried forward from the Q4-2026 report
Q1 FY27	**7 Aug 2026**	**Newly deep-read in full ★**

Only the Q1 FY27 call was read in full this time; the three-year backstory comes from the prior report. A later call (Q2 FY27, held after 30 Sep 2026) exists but is left for the next edition.

★ Latest concall highlights: Q1 FY27 (call held 7 Aug 2026)

- **Sales kept racing.** Revenue +38% as the factories work through the record backlog. *Read: the growth engine is still running hard.*
- **Orders dropped.** New orders fell 30%, and the backlog slipped a little for the first time in a while. Management blamed a quiet Jan–Mar for private power-line auctions and says the pipeline picked up from June.

- **Margin eased, as warned.** Gross margin fell to 41.3% from 45.3% for FY26: fewer high-margin exports, costlier metals, and more of a lower-margin high-voltage line. EBITDA still landed at 25.1%, in the mid-20s band they'd guided.
- **Group orders stalled.** The ~Rs 3,000 cr group export order is now on hold (the overseas utility had budget issues), and a ~Rs 1,300 cr US data-centre order moved to Q2/Q3. Exports were still 46% of this quarter's orders, from smaller wins in the US, Spain and Morocco.
- **New risk:** four Chinese GIS makers were approved to bid in India. Management says it's too early to judge, and local-content rules should limit how low they can price. Tone: calm and direct; the margin dip was explained up front.

Business mix & capacity
Domestic vs export: exports were 30% of Q1 revenue (33% in FY26) and 46% of Q1 orders. *Read: roughly two-thirds of sales are in India; exports are a big and growing slice of what's coming.*
Customers: private developers are 77% of the backlog, central utilities and PSUs 21%, state utilities 2%. *Read: little exposure to slow-paying state boards.*
Capacity: no utilisation figure given. The ~Rs 1,000 cr expansion is mostly inside existing plants on land already owned, and management says it's on schedule.

★ **Since our last report**: builds on the Q4-2026 report (boundary call 19 May 2026). Prior verdicts: trigger **YES**, consistency **YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	Grid order boom filled the book to ~3 years of sales; margins tripled	Revenue +38%; backlog still ~3 years; but new orders –30%	On-track
Consistency: YES	Under-promises and over-delivers	Margin came in exactly where guided; guidance held; dip explained up front	Confirmed
~Rs 3,000 cr group export order	Slipping, expected H2 FY27	Put on hold by the end customer; would need fresh shareholder approval	Broken
HVDC as the next leg (FY28–29 revenue)	First large order won in Q4 FY26	Pipeline "slightly delayed but not going away"; one project on hold, one switched to AC; bids due Aug/Sep	Slipping
Data-centre demand	Early, nothing booked	Only small product orders; a big US order moved to Q2/Q3	Slipping
Mid-20s margin for FY27	Guided after big beats	25.1% in Q1; guidance reaffirmed	On-track

Verdict change this quarter: both **unchanged**. The core business did what management said it would. What slipped (group orders, HVDC timing, data centres) depends on customers, and management flagged each one plainly.

3. Earning-trigger thesis

Still a strong, proven driver, but the next leg looks slower. India's huge grid build-out gave the company about three years of work in hand, and turning that into sales is lifting revenue fast at mid-20s margins. That part is locked in. What softened this quarter is the stuff that would extend the run: fresh domestic orders, the big group export deal, HVDC and data centres all moved later. If the auction pipeline that picked up in June turns into orders, the dip will look like a blip. If not, growth slows once the backlog runs down.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Grid order boom	Auction pipeline better from June; market flat to slightly up this year	Backlog ~Rs 20,930 cr; Q1 orders –30%	Now → 2030s	**Strong**	↓ weakening a bit: orders dipped
	Higher factory output; expansion on schedule	Revenue +38%	Now	**Strong**	unchanged

Turning backlog into sales					
Margin	Mid-20s EBITDA for FY27	25.1% in Q1, down from ~27% in FY26	Now	**Strong**	↓ slight dip, inside guidance
Exports (incl. GE group)	"India for the World"	46% of Q1 orders; big group order on hold	Ongoing	**Moderate**	unchanged: small wins up, big one gone for now
HVDC long-distance links	Pipeline strong, pace slower	One project on hold, one switched to AC	FY28–29	**Moderate**	↓ weakening: timing slipping
Data centres	Bigger, higher-voltage projects being planned	Only small orders; US order delayed	Long	**Early**	unchanged

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q2 FY24	Keep up ~Rs 1,000 cr of orders a quarter	Far exceeded through FY26; Q1 FY27 still above it at Rs 1,140 cr	Delivered
FY25 → FY26	Margin to mid-to-high teens, later mid-20s	FY25 19%, FY26 ~27%	Beat
Q2 FY26	FY26 revenue Rs 5,500–6,000 cr	Rs 6,210 cr	Beat
Q2 FY26	~Rs 3,000 cr group export order	Delayed, then put on hold by the customer	Missed
Since FY24	Big HVDC orders	First one won Q4 FY26; next ones slower	Partly
Q4 FY26 → Q1 FY27 (new)	Mid-20s margin even with costlier metals	25.1%, explained line by line	Delivered

Narrative drift: none. The story is still grid spending plus healthy margins, and this quarter they owned the bad news (orders down, margin lower, group deal on hold) before anyone asked. The repeated weak spot is big orders that depend on other people's decisions, especially the GE group deals. Those keep getting announced early and then slipping.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: unchanged
Nothing in the new call breaks it, though the order dip is a yellow flag. About three years of work is already booked, sales are growing fast and margins are where they said. The open question is the next leg: domestic orders need to bounce back from the soft quarter, and HVDC and data-centre work is arriving later than hoped. New Chinese competition in switchgear is worth watching.

Management consistent? → YES vs last quarter: unchanged
What management controls, it delivered: growth, margin within the guided band, and a candid walk-through of the weak spots. The group export order going on hold is a real miss and the second time it's slipped, but it rests on an outside customer's budget. One more stalled group order would start to dent the record.
