Anupam Rasayan India Ltd

Concall tracker report · Q2 2027 (Sep 2026 quarter) · prepared 11 Nov 2026

1. Snapshot

A Surat-based custom-synthesis chemical maker: it makes complex specialty chemicals to order for global agrochemical, pharma, personal-care, polymer and electronics/EV customers. Through acquisitions it now also owns Tanfac (fluorine raw materials), Jayhawk Fine Chemicals in the US, and since this quarter a controlling stake in Bliss GVS Pharma (finished medicines).

- Market cap about Rs 13,636 cr at about 81 times profit: very expensive for its current earnings.
- Standalone FY26 sales Rs 1,676 cr, up 87% after a 21% fall in FY25: a sharp rebound from a bad agro-chemical slump.
- Standalone FY26 net profit Rs 161 cr.
- Return on capital about 7%: low, because a lot of capital went into plants and acquisitions that are still ramping up.
- Borrowings about Rs 1,970 cr and rising: acquisitions and capex funded partly with debt.
- Sep 2026 quarter (consolidated, press release): revenue Rs 821 cr, up 11%; EBITDA up 41% at a 25% margin; profit Rs 65 cr, up only 14%.

2. Concall coverage

The Q2 FY27 call was held on 6 Nov 2026 (recording filed) but the transcript was not yet published on Screener or NSE when this report was written. The latest quarter below comes from the 6 Nov 2026 press release; the most recent transcript read is the Q1 FY27 call (14 Aug 2026).

Quarter / source	Date	Read?
Q3 FY24 to Q3 FY25 (5 calls)	Feb 2024 - Feb 2025	Yes (scanned for guidance)
Q4 FY25	May 2025	Yes (scanned)
Q1 FY26 to Q3 FY26 (4 calls)	Aug 2025 - Feb 2026	Yes (scanned)
Q4 FY26	25 May 2026	Yes
Q1 FY27	14 Aug 2026	Yes, in full
Q2 FY27	6 Nov 2026	Transcript not out; press release read

Thirteen calls over about three years, plus the latest press release.

Latest update highlights - Q2 FY27 (press release, 6 Nov 2026)

- Highest-ever quarterly consolidated revenue, Rs 821 cr, up 11%; EBITDA margin 25% vs 19% a year ago.
- Profit grew far slower than EBITDA (up 14%), held back by higher depreciation as new assets and Jayhawk came in.
- Signed a six-year supply agreement with a US speciality metal maker, its first step into the geological resources sector.
- Completed the acquisition of a 50.07% controlling stake in Bliss GVS Pharma.
- Revised results were filed later the same day (6 Nov).

Business mix & capacity

- Domestic vs export: most business is with global customers through custom synthesis; an exact split was not given in the calls read.
- Capacity: management says the major capex cycle is complete and all planned plants are running; little capex is needed for the existing Anupam platform. About 2 lakh tonnes of specialty chemical capacity across 14 plants.

3. Earning trigger thesis

The story is new molecules moving from the lab into commercial supply, especially in pharma and performance materials (electronics, EV, polymers), backed by signed LOIs and contracts it says add up to about Rs 18,000 cr over their tenures. Acquisitions (Tanfac, Jayhawk, Bliss GVS) are meant to make it a broader platform. The catch is profit: debt and depreciation have grown so fast that EBITDA gains barely reach net profit.

Trigger	What management said	Evidence so far	Time horizon	Strength
New molecule commercialisation	65+ pharma and polymer molecules in R&D/pilot; ETFA via flow chemistry commercialised (Aug 2026)	Over 10 molecules commercialised in two years; record quarterly revenue	FY27 onwards	Moderate
Signed LOIs and contracts	About Rs 18,000 cr potential business; BASQUEVOLT LOI about USD 300 m over ten years, start in FY27	New six-year supply deal with a US speciality metal maker	Multi-year	Unproven: contracts, not sales yet
Acquisitions (Jayhawk, Bliss GVS)	Platform synergies, US base, formulations	Jayhawk consolidated; Bliss control completed in Q2	FY27-FY28	Unproven

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	Borrowings rising
New business	Yes	Bliss GVS Pharma acquisition completed; first deal in geological resources (Nov 2026)
Margin up	Yes	Consolidated EBITDA margin 25% vs 19% a year ago (Nov 2026 press release)
New management	No	-
New capacity	No	Major capex done, no new plants planned (Aug 2026)
Big orders	Yes	LOIs and contracts worth about Rs 18,000 cr over their tenures (Aug 2026)
Turnaround	Yes	FY26 rebound after the FY25 agro-chemical slump (May 2026)
Promoter buying	No	-

Single concrete driver: New pharma and performance-material molecules moving into commercial supply under signed long-term contracts and LOIs, plus the Jayhawk and Bliss GVS acquisitions.

3c. Margin bridge

EBITDA margin rose to 25% from 19% a year ago as more of the mix came from pharma and performance materials; management says it doesn't want to guide but sees an upward bias as these products ramp up. Net profit margin didn't follow because depreciation rose. (lasting)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Aug 2024	Growth of 25-30% (with the exception of the current year)	FY25 standalone sales fell 21%	Missed
Feb - Oct 2025	FY26 growth of 30-35%, then raised to 50%+	FY26 standalone sales up 87%	Delivered
May 2024 - May 2025	Working capital to ease	Operating cash flow Rs 334 cr in FY26, working capital improved	Delivered
Aug 2026	Bliss GVS acquisition on plan	Controlling stake completed in Q2 FY27	Delivered
Aug 2026	BASQUEVOLT commercialisation during FY27	No update yet	Too-early

The direction has held for years: custom synthesis, then fluorination, then pharma and performance materials, now a multi-company platform. Growth guidance has been volatile (a big FY25 miss, then a big FY26 beat as agro recovered). The newer worry is that the story keeps getting bigger through acquisitions while profit and return on capital stay low.

5. Bottom line

Durable earning trigger? → MAYBE

New molecules and the contracts behind them are real, and margins are rising. But the profit line barely moves, debt keeps climbing and most of the Rs 18,000 cr is potential, not revenue. It needs to show up in net profit.

Management consistent? → MAYBE

Delivered the FY26 rebound, the working capital fix and the Bliss deal on time, but the FY25 guidance miss was large and the story keeps expanding through acquisitions.

6. Checkpoints for next quarter

- December quarter profit grows faster than revenue
- BASQUEVOLT product starts commercial supply in FY27
- Borrowings stop rising after the Bliss deal
