Tata Steel Ltd

Concall tracker report · Q2 2027 (Sep 2026 quarter) · prepared 11 Nov 2026

1. Snapshot

One of the world's big steel makers. Most of the profit comes from India (Jamshedpur, Kalinganagar, Meramandali and the Neelachal Ispat plant in Odisha), selling flat steel to carmakers, Tata Tiscon rebars to home builders and downstream products like tubes, wires, tinplate and coated sheets. It also owns steelworks in the Netherlands (IJmuiden) and the UK (Port Talbot), which have been the weak spots.

- Market cap about Rs 2.36 lakh cr: one of India's largest listed companies.
- Standalone FY26 sales Rs 1,39,720 cr, up 5%: modest growth after two down years.
- Standalone FY26 net profit Rs 16,065 cr: profit back to growth after a dip in FY25.
- Standalone operating margin about 23-25%: Indian steel margins are healthy.
- Sep 2026 quarter (consolidated, press release): revenue Rs 65,436 cr and EBITDA Rs 10,665 cr, EBITDA up 14% on the June quarter and 17% on a year ago.
- Net debt Rs 91,423 cr, 2.4 times EBITDA: a lot of debt, but inside the company's own comfort range of 2.5-3 times through the cycle.

2. Concall coverage

The Q2 FY27 earnings call was held on 7 Nov 2026 but its transcript was not yet published on Screener or NSE when this report was written (only the recording link was filed). The latest quarter below is taken from the 7 Nov 2026 press release; the most recent transcript read is the Q1 FY27 call (filed 6 Aug 2026).

Quarter / source	Date	Read?
Q1 FY23 to Q2 FY25 (8 calls)	Jul 2022 - Nov 2024	Yes (scanned for promises)
Q3 FY25	Feb 2025	Yes (scanned)
Q4 FY25	May 2025	Yes
Q1 FY26	Aug 2025	Yes (scanned)
Q2 FY26	Nov 2025	Yes (scanned)
Q3 FY26	Feb 2026	Yes (scanned)
Q4 FY26	May 2026	Yes
Q1 FY27	Jul/Aug 2026	Yes, in full (from NSE)
Q2 FY27	7 Nov 2026	Transcript not out; press release read

Fifteen transcripts across about four years, plus the latest press release.

Latest update highlights - Q2 FY27 (press release, 7 Nov 2026)

- India EBITDA Rs 10,634 cr at a 25% margin; India deliveries up 16% on the June quarter to 5.98 million tons.
- Automotive and special products had their best ever second quarter, with high-end sales up 26%. Tata Tiscon rebar sales about 2.7 million tons over twelve months.
- Netherlands EBITDA rose from Euro 4 million to Euro 72 million after the Direct Sheet Plant restarted in early August.
- UK EBITDA loss widened to GBP 56 million on weak demand, high imports and stock across the chain.

- The 4.8 MTPA Neelachal (NINL) expansion has entered execution; the NINL merger with Tata Steel is on track for this financial year, subject to NCLT approval. Cost savings on track for Rs 7,140 cr this year.

Business mix & capacity

- Domestic vs export: India is about 75% of group crude steel output (Q1 FY27 call); Europe makes the rest. An India-sales vs export split was not given.
- Capacity: Kalinganagar phase 2 (5 MTPA) and the Ludhiana electric furnace are ramping up. Management said that after FY27 there is little room to grow India volume for about four years, until NINL's expansion comes on stream around 2030.

3. Earning trigger thesis

The earnings story is India: the bigger Kalinganagar plant ramping up, more high-end automotive steel, branded retail (Tiscon, Aashiyana) and downstream products, which is why India margins sit above their ten-year average. The next big step, the NINL long-products expansion, was approved in Aug 2026 but only arrives around 2030. Europe is the drag: the Netherlands is hostage to regulators and the UK keeps losing money until its electric furnace is built.

Trigger	What management said	Evidence so far	Time horizon	Strength
Kalinganagar 5 MTPA ramp-up	Blast furnace start by end Sept 2024, then ramp	Commissioned in Q2 FY25; India volumes and EBITDA higher	Now	Strong: already in numbers
Value-added mix (auto, Tiscon, downstream)	Grow high-end and branded sales	Record auto volumes; high-end sales up 26% in Q2 FY27	Ongoing	Moderate: steady, not a step change
NINL 4.8 MTPA expansion	Board approved Aug 2026, about Rs 33,873 cr	Execution phase started	Around 2030	Unproven: years away
UK electric arc furnace	Build at Port Talbot by end FY28; UK to be EBITDA positive	Construction on schedule but grid connection delayed; UK losses widened	FY28+	Weak so far

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Net debt kept within a stated range, not being cut
New business	Yes	Approvals in shipbuilding, moves into data centres and oil and gas (Aug 2026)
Margin up	Yes	India realisations up about Rs 6,000 per ton, EBITDA margin 27%, above the ten-year average (Aug 2026)
New management	No	-
New capacity	Yes	Kalinganagar phase 2 and Ludhiana EAF ramping up; Jamshedpur combi mill commissioned (Aug 2026)
Big orders	No	-
Turnaround	Yes	Netherlands EBITDA up from Euro 4m to Euro 72m after Direct Sheet Plant restart (Nov 2026 press release)

Promoter buying	No	-

Single concrete driver: The bigger Kalinganagar plant and a richer India product mix (automotive, Tiscon, downstream), with the NINL expansion as the next leg around 2030.

3c. Margin bridge

India margin is high but slipped from 27% in the June quarter to 25% in September as volumes grew in a softer quarter and raw material costs rose; management had flagged this compression in August. The Netherlands improved on better pricing and the plant restart, while the UK worsened. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Aug 2024	Kalinganagar blast furnace start by end Sept 2024	Commissioned during Q2 FY25	Delivered
May 2025	Ludhiana EAF in next 12 months	Commissioned and ramping by Aug 2026	Delivered
FY26	Cost savings plan of Rs 11,500 cr	Rs 10,868 cr, about 95% of plan	Partly
May 2025 - May 2026	UK to become EBITDA positive (May 2026: 'hope to be EBITDA positive during this year')	UK loss narrowed to GBP 27m in Q1 FY27, then widened to GBP 56m in Q2 FY27	Missed
Aug 2026	Q2 better than Q1 in India in rupee terms, with some margin squeeze	India EBITDA up, margin 25% vs 27%	Delivered
Aug 2026	Netherlands Direct Sheet Plant back in production	Restarted early August, back at rated capacity	Delivered
Aug 2026	UK spread up another GBP 70-80 per ton in Q2	UK EBITDA loss doubled	Missed

The India story has stayed the same for years: build Kalinganagar, push high-end and branded steel, then grow at NINL. That part has been delivered on time. Europe is where the promises keep slipping: the UK has been 'about to turn EBITDA positive' for over a year, the Netherlands keeps hitting regulatory shutdowns, and the UK furnace now faces a grid delay. Tone is confident on India, defensive on Europe.

5. Bottom line

Durable earning trigger? → MAYBE

India is a real, working driver and it's in the numbers. But it's a cyclical steel business, India volume growth is close to capped until NINL arrives around 2030, and Europe can swallow a good part of India's gains in any bad quarter. A durable trigger needs Europe to stop bleeding.

Management consistent? → MAYBE

India projects came in on time and cost savings were close to plan. The UK promises have repeatedly missed and the Netherlands keeps surprising on the downside, so the record is mixed.

6. Checkpoints for next quarter

- UK EBITDA loss narrows in the December quarter
- NINL merger with Tata Steel gets NCLT approval by March 2027
- Netherlands Direct Sheet Plant keeps running without a fresh shutdown
