B C C Fuba India Ltd

Concall Tracker · Q2 2027 · first report

1. Snapshot

Small maker of printed circuit boards (the green boards every electronic product is built on) from a plant at Nalagarh, Himachal Pradesh. It makes single, double-sided and multilayer boards and sells them to Indian electronics makers.

Number	Value	What it means
Market cap	Rs 769 cr	What the whole company is worth on the market today.
Stock P/E	69	Investors pay about 69 years of current profit, so the recent jump in profit is already well priced.
Q2 FY27 sales	Rs 29 cr	Up about three quarters from a year ago and a record quarter; sales have risen for six straight quarters.
Operating margin	21-24% in the last two quarters	Up from about 14-16% a year ago, a big step up in what it keeps from each rupee of sales.
FY26 sales / profit	Rs 73 cr / Rs 6 cr	Sales grew by about half last year; still a very small company.
Promoter holding	32%	Promoters own about a third and slightly diluted after the 2026 rights issue.

2. Concall coverage

No concall transcripts were available on Screener. This report is based on a global web deep-dive.

Sources used:

- Screener.in financial tables and shareholding (BSE 517246)
- multibagg.ai write-up of Q1 FY27 results (Aug 2026), citing the company's filing
- whalesbook.com report on Q2 FY27 results (Nov 2026)
- marketsmojo.com result analysis of Q4 FY26
- scanx.trade summaries of board and AGM filings (Feb and Sep 2026)

Latest update highlights - Q2 FY27 (Sep 2026 results, from filings and news coverage)

- Sales about Rs 29 cr, up about three quarters on last year; net profit roughly two and a half times last year's.
- Operating margin about 21%, a touch below Q1's 24% but far above last year's 15%.
- In Q1 the company said finalised price revisions with customers added Rs 1.67 cr to sales, plus strong PCB demand.
- A rights issue approved in Feb 2026 (about Rs 35 cr) was completed with a final call in June 2026; use of money not spelled out publicly.
- No earnings call, investor presentation or guidance has ever been published.

Business mix & capacity

Domestic vs export: Domestic vs export split not disclosed. Appears mostly domestic.

Capacity use: Utilisation not disclosed. Fixed assets rose in FY25 and the Q4 FY26 analysis credits capacity expansion, but no capacity numbers are public.

3. Earning Trigger thesis

No management narrative exists to test. The public record points to one driver: demand for locally made circuit boards as India builds more electronics at home, plus price increases the company pushed through in 2026. That

shows in the numbers (record sales, a sharp jump in margins), but nothing tells us whether the higher prices stick or what the rights-issue money will build.

Trigger	What management said	Evidence so far	Time horizon	Strength
PCB demand from Indian electronics makers	No management statement; sector-wide utilisation reportedly rising	Six straight quarters of sales growth	Now	Moderate: in numbers, unexplained
Price revisions	Company filing: price revisions added Rs 1.67 cr in Q1 FY27	Margin jumped to 24% in Q1 and held near 21% in Q2	Now	Moderate: could be partly one-off
Capacity from rights-issue money	Rights issue approved Feb 2026; use not stated	Not visible yet	Unknown	Unproven

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	Not stated
New business	No	Not stated
Margin up	Yes	Q1 FY27 filing: price revisions with customers added to revenue (Aug 2026)
New management	No	Director tenure extended, no new CEO/MD (Sep 2026 AGM)
New capacity	No	Capacity expansion credited by analysts, not by the company
Big orders	No	No order book disclosed
Turnaround	No	Profitable for several years
Promoter buying	No	Promoter stake dipped slightly after the rights issue

The single concrete driver: Price increases agreed with customers in 2026 on top of steady demand for Indian-made circuit boards.

3c. Margin bridge

Operating margin rose to the low twenties from about 15% a year ago. The company tied the jump to price revisions agreed with customers; part of it may be a one-time catch-up in the quarter they were finalised. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY25-FY27	No public guidance or targets found	Sales grew fast each year; margins rose	Too-early

Narrative drift: There is no story to drift: the company holds no calls and gives no outlook. That is itself the risk, since a reader can't tell whether the margin jump will last.

5. Bottom line

Durable earning trigger? → MAYBE

Results are clearly better, but the only explained driver is a price revision, and nobody from the company has said what comes next or what the fresh money is for.

Management consistent? → MAYBE

Nothing promised, so nothing missed. With no calls or guidance, consistency can't be judged.

6. Checkpoints for next quarter

- Quarterly sales stay at or above the September quarter's level

- Operating margin holds near the last two quarters
- Company states what the rights-issue money is funding
