Time Technoplast Ltd

Concall Tracker · Q2 2027 · first report, built without the Q2 FY27 transcript

1. Snapshot

Makes plastic industrial packaging (drums, jerry cans and intermediate bulk containers, IBCs) for chemical, paint, food and pharma companies, in India and through plants in about ten other countries, which together are about three-quarters of revenue. The rest is composite products (lightweight CNG, LPG and hydrogen cylinders), PE pipes for water and infrastructure projects, and smaller lines such as batteries and recycling. Polymer is about 70% of its cost and is passed on to customers with a lag of about a month.

Number	Value	What it means
Market cap	Rs 9,714 cr	What the market values the whole company at (Screener, Nov 2026).
Revenue, FY26 (consolidated)	Rs 6,105 cr	The full-year sales across India and overseas plants.
Net profit, FY26 (consolidated)	Rs 477 cr	The profit after tax for the year.
Q2 FY27 revenue (consolidated)	Rs 1,994 cr	Up 32% on Rs 1,511 cr a year ago; part of this is higher polymer prices passed on.
Q2 FY27 EBITDA (consolidated, calculated)	About Rs 263 cr	Up about 18% on about Rs 223 cr a year ago; margin about 13% against about 15%, because pass-through prices swell revenue.
Q2 FY27 net profit (consolidated)	Rs 148 cr	Up 27% on Rs 117 cr a year ago; H1 FY27 profit Rs 266 cr, up about 25%.
Composite products revenue, Q2 FY27	Rs 785 cr	Up 34% on a year ago, the fastest-growing segment.
Finance cost, Q2 FY27	Rs 15 cr	Down from Rs 21.5 cr a year ago as debt is repaid.
Promoter holding	47.5%	Fell from about 51.6% to about 47.5% during 2025; steady since.

2. Concall coverage

Quarter	Date	Transcript read?
Q4 FY25	28 May 2025	Yes (skimmed for guidance)
Q1 FY26	Aug 2025	Yes (skimmed for guidance)
Q4 FY26	May 2026	Yes (skimmed for guidance)
Q1 FY27	6 Aug 2026	Yes, read in full
Q2 FY27	6 Nov 2026 (call held)	No: transcript not filed yet

Four transcripts across about a year and a half were used. The Q2 FY27 call was held on 6 Nov 2026 and its audio was filed, but the written transcript was not on Screener or BSE when this report was built (checked 11 Nov 2026), and no investor presentation for the quarter was listed. The Q2 FY27 section uses the board-approved results (6 Nov 2026) and two order announcements (7 and 11 Nov 2026) instead, read against what management said in August 2026.

Latest update highlights: Q2 FY27 (results and order filings, Nov 2026; no transcript yet)

- Revenue rose 32% to Rs 1,994 cr and net profit 27% to Rs 148 cr. H1 profit growth of about 25% is in line with management's FY27 aim of 23 to 24% profit growth on more than 15% volume growth (Aug 2026).
- Composite products revenue grew 34% to Rs 785 cr, above the 25 to 30% growth management expects for the segment this year. Polymer products (mainly packaging and pipes) grew 30% to Rs 1,209 cr.
- On 11 Nov a public-sector oil marketing company doubled its order for 10 kg composite LPG cylinders from 1.4 lakh to 2.8 lakh units, taking the order to about Rs 76 cr. On 7 Nov the Saudi subsidiary won a Rs 35 cr one-year supply contract from CHEMANOL.
- Finance cost fell to Rs 15 cr from Rs 21.5 cr a year ago, in line with the debt-reduction plan. In August management said it cut net debt by Rs 90 cr in Q1 and is spending about Rs 350 cr of capex in FY27.

Business mix & capacity

Domestic vs export: About 65% India and 35% overseas, with overseas spread over about ten countries (Aug 2026). Overseas units report on a calendar-year basis, so their quarter lags India's by three months.

Capacity use: Utilisation about 80% in India and about 85% overseas, above 90% in the US (Aug 2026). New capacity planned at Sanand (Gujarat), Odisha, Chiplun (Maharashtra) and Saudi Arabia; a fully automatic composite plant near Mouda and an automated IBC plant at Silvassa (Phase 1) were completed.

3. Earning Trigger thesis

The driver is composite products: lightweight CNG cascades and cylinders, composite LPG cylinders for oil marketing companies, and newer hydrogen cylinders, fire extinguishers and air tanks. Management targets 25 to 30% growth here against about 11 to 13% for packaging, and says the mix shift plus automation, power savings and lower interest will make profit grow faster than volume. Q2 FY27 fits that: composite revenue up a third, profit up about a quarter, interest down. The catch is that the stock already trades at about 40 times earnings on Screener, and part of the revenue growth is just higher polymer prices.

Trigger	What management said	Evidence so far	Time horizon	Strength
Composite cylinders (CNG, LPG, hydrogen)	Composite growth 25 to 30% in FY27; order book about Rs 185 cr (Aug 2026)	Q2 composite revenue up 34%; LPG order doubled to about Rs 76 cr	FY27 to FY29	Strong: in the numbers and in orders
Profit growing faster than volume	Volume above 15%, EBITDA 19 to 20%, PAT 23 to 24% in FY27 (Aug 2026)	H1 PAT up about 25%; finance cost down	FY27	Strong so far
New products (hydrogen, fire extinguishers, air tanks, data-centre batteries)	Approvals expected within about 90 days; fire extinguisher volumes in H2 (Aug 2026)	Not yet visible in results	FY27 to FY28	Unproven

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	Net debt cut by Rs 90 cr in Q1 FY27; aim to become debt-free (Aug 2025, Aug 2026). Q2 finance cost fell to Rs 15 cr from Rs 21.5 cr.
New business	Yes	Composite fire extinguishers for oil companies, air receiver tanks for buses and trucks, and data-centre batteries with Monbat (Aug 2026).
Margin up	No	EBITDA margin in percentage terms fell as polymer pass-through swelled revenue; management asks investors to look at absolute EBITDA (Aug 2026).
New management	No	No change mentioned.
New capacity	Yes	Automatic composite plant near Mouda and Silvassa IBC Phase 1 completed; Sanand, Odisha, Chiplun and Saudi Arabia plants planned (Aug 2026).
Big orders	Yes	Composite order book about Rs 185 cr and confirmed packaging orders about Rs 400 cr for the calendar year (Aug 2026); LPG cylinder order doubled to about Rs 76 cr (11 Nov 2026).
Turnaround	No	Not a turnaround.
Promoter buying	No	Promoter holding steady at about 47.5% after the QIP.

The single concrete driver: Composite CNG and LPG cylinders are growing far faster than packaging, with a public-sector oil company doubling its composite LPG cylinder order in November 2026.

3c. Margin bridge

Q2 FY27 EBITDA (calculated from the results) was about 13% of revenue against about 15% a year ago, even though absolute EBITDA rose about 18%. Management explained in August that polymer prices jumped with the West Asia conflict and are passed through to customers with a month's lag, which swells revenue without adding profit, so it guides on absolute EBITDA growth. The lower percentage is a price effect (one-off).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
2022 to May 2025	ROCE of 14%, 16%, 18% in successive years	Achieved each year; 18.1% in FY25	Delivered
May 2025	ROCE 20% in FY26	18.9%, blamed on QIP-funded automation spending	Partly
May and Aug 2025	Composite growth about 28 to 30%	Composite revenue up 34% in Q2 FY27	Delivered
Aug 2025	Debt-free in about 18 months	Net debt down Rs 90 cr in Q1 FY27; finance cost falling; not yet debt-free	Too-early
Aug 2026	FY27 PAT growth 23 to 24%	H1 PAT up about 25%	On track
Aug 2026	Ebullient Packaging acquisition	Deferred by the board until prices stabilise	Too-early (paused)

Narrative drift: The story has been very steady for several years: about 15% volume growth, faster growth in composites, rising ROCE, falling debt. The managing director repeats the same targets call after call and mostly hits them, with FY26 ROCE a small miss. He refuses revenue and margin-percentage guidance while polymer prices are volatile, which is reasonable. The one open item is the Ebullient acquisition, paused by the board.

5. Bottom line

Durable earning trigger? → YES

Composite cylinders are a concrete, named driver already showing in the numbers, with orders from public-sector oil companies and a stated growth rate that the segment beat in Q2 FY27. Lower interest adds to profit growth.

Management consistent? → YES

Management has set simple targets (volume, composite growth, ROCE, debt) and mostly delivered on them over several years. FY26 ROCE fell slightly short and an acquisition is on hold, but the story has not changed.

6. Checkpoints for next quarter

- Composite products keep growing above 25% in Q3 FY27
- Doubled LPG cylinder order starts shipping
- Net debt keeps falling in H2 FY27
