Gokul Agro Resources Ltd

Concall tracker report · Q2 2027 (Sep 2026 quarter) · prepared 11 Nov 2026

1. Snapshot

An edible oil processor that imports most of its raw oil (about 80%), refines and crushes it at four port-linked plants (Gandhidham, Krishnapatnam, Haldia, Mangalore) and sells mostly to food companies such as Parle, ITC, Britannia and Balaji Wafers. It also makes castor derivatives, specialty fats and biodiesel, and is building consumer brands like Vitalife, Mahek, Sun Premium and Farm Jyoti.

- Market cap about Rs 6,717 cr: what the market values the whole company at.
- FY26 revenue Rs 24,077 cr, EBITDA (with other income) Rs 716 cr, profit Rs 387 cr: huge sales but thin margins, typical of oil processing.
- Q2 FY27: revenue Rs 7,481 cr, up 13%; EBITDA up 41% to Rs 276 cr; margin 3.68% vs 2.94% a year ago; profit Rs 150 cr, up 40%.
- Debt-to-equity down from 0.77x (FY24) to 0.36x (Sep 2026).
- About 16.8 times earnings; promoters hold about 74%.

2. Concall coverage

Quarter / source	Date	Read?
Q2 FY27 (first ever earnings call)	29 Oct 2026	Yes, in full
Earlier quarters	-	No calls held; only presentations

Only one call exists, so the consistency read rests on that one call plus the numbers. Management plans calls after half-year and full-year results.

Latest concall highlights - Q2 FY27 (29 Oct 2026)

- Revenue growth was 'broadly driven by the price realizations'; commodity prices are up 15-20%. Plants are at full capacity, so no volume growth is expected this year.
- CFO calls the margin of about 3.5-4% sustainable, citing branding, value-added products, better utilisation, smarter sourcing and cost control. Inventory is hedged; open inventory kept to 10-15%.
- New capacity of about 8 lakh tonnes a year across all four plants, operational by October 2027; volume growth of about 10% next year and 10-15% a year after that.
- Biodiesel plant (300 tonnes a day, Gandhidham) fully running since Q1 FY27; Rs 237 cr revenue in Q2 and Rs 596 cr in H1.
- Import duty cut on 24 Sep 2026 made dealers delay buying in September, raising inventory at quarter end; the company calls it temporary.

Business mix & capacity

- Domestic vs export: H1 FY27 revenue about 79% B2B, 13% exports (33 countries) and 8% B2C (up from about 5% in FY26).
- Capacity: key refining plants at full utilisation; Gandhidham about 3,400 tonnes a day refining and 3,200 crushing, Krishnapatnam 1,400, Haldia 1,350; about 8 lakh tonnes a year more by October 2027.

3. Earning trigger thesis

The earnings story is scale and mix: more capacity in late 2027, the new biodiesel export business, castor derivatives and specialty fats, and a slowly growing branded share. Margins have climbed, and management calls them sustainable. The catch: this year's growth is mostly higher oil prices, the plants are full until the new capacity arrives, and this is the first call, so there's no track record to check.

Trigger	What management said	Evidence so far	Time horizon	Strength
New capacity (about 8 lakh tonnes a year)	Operational by October 2027; 10% volume growth next year, 10-15% after	Under construction	FY28	Unproven
Biodiesel	Newest export growth platform	Rs 596 cr revenue in H1 FY27	Now	Moderate
Branded B2C	Main growth driver with value-added products	B2C share 8% in H1 vs about 5% in FY26; margins similar to company average	Medium term	Weak: early
Margin	3.5-4% EBITDA margin is sustainable	3.68% in Q2, 3.86% in H1 vs about 2.9% a year ago	Ongoing	Moderate: helped by prices

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Debt-equity fell to 0.36x, but no repayment plan stated; capex coming
New business	Yes	Biodiesel 'our newest export revenue growth platform', Rs 237 cr revenue in Q2 (Oct 2026)
Margin up	Yes	'These margins are sustainable'; branding, value-added portfolio, better utilisation, smarter sourcing (Oct 2026)
New management	No	Not stated
New capacity	Yes	About 8 lakh tonnes a year added across four plants, 'operational only by October 2027' (Oct 2026)
Big orders	No	Not applicable
Turnaround	No	Not applicable
Promoter buying	No	Promoter stake roughly flat at about 74%

Single concrete driver: About 8 lakh tonnes a year of new refining capacity by October 2027 plus the new biodiesel export business, with a slowly rising branded share.

3c. Margin bridge

EBITDA margin was 3.68% in Q2 FY27 against 2.94% a year ago. Management credits branding, value-added products, utilisation, sourcing and cost control, and calls it sustainable; it also said realizations rose with commodity prices up 15-20%, so part of the gain may follow oil prices (lasting per management, unproven).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Past (from the numbers, no calls)	Expansion across plants, biodiesel, B2C	Revenue Rs 8,387 cr (FY21) to Rs 24,077 cr (FY26); biodiesel running; B2C share rising	Delivered

Oct 2026	3.5-4% EBITDA margin sustainable	First test is Q3 FY27	Too early
Oct 2026	New capacity by October 2027; 10% volume growth next year	Too early	Too early

With one call there's no story to drift yet. The numbers back up the expansion history management described, and the plan laid out is specific (capacity, dates, margin band), which makes it easy to check next time.

5. Bottom line

Durable earning trigger? → MAYBE

Biodiesel is already adding sales and margins are up, but the big new capacity is a year away and this year's growth is mainly higher oil prices.

Management consistent? → MAYBE

Only one call, so there's no record of promises kept. The plan is specific and the past numbers fit it, but it hasn't been tested.

6. Checkpoints for next quarter

- EBITDA margin stays within 3.5-4% in the December quarter
- September's extra inventory clears by the next results
- Capacity expansion stays on track for October 2027
