

Kingfa Science & Technology (India) Ltd

Concall-Tracker report | Ticker: KINGFA (NSE / BSE) | Sector: Modified & engineering plastics

Prepared 04 July 2026 · NO-CONCALL web deep-dive path · Figures in ₹ crore unless stated

1. Snapshot

What the business does (in one line): Kingfa India is the Indian arm of China's Kingfa Sci. & Tech. It takes raw plastic granules and "compounds" them — mixing in glass fibre, colours, flame-retardants and other additives — to make stronger, tailor-made engineering plastics that car makers, appliance brands, and wire-and-cable and electronics firms mould into parts. In plain terms: it upgrades ordinary plastic into high-performance plastic and sells it by the tonne.

Market cap	₹6,923 cr — <i>the total value the stock market puts on the whole company; a solidly mid-sized company.</i>
Share price / valuation	₹5,108 per share at a P/E (price-to-earnings) of 37.4 — <i>investors are paying ₹37 for every ₹1 of yearly profit, a rich/premium price that already expects strong growth.</i>
FY26 revenue (year to Mar 2026)	₹1,996 cr, up 14.4% — <i>total sales for the year, roughly a seventh higher than last year.</i>
FY26 net profit	₹185 cr, up 21.2% — <i>what's left after all costs and tax; it grew faster than sales, meaning each rupee of sales earned a bit more profit than before.</i>
Operating margin (FY26)	~13% — <i>out of every ₹100 of sales, about ₹13 is operating profit (profit from the core business before interest, tax and depreciation).</i>
Returns on capital	ROCE 23.2%, ROE 17.4% — <i>for every ₹100 of capital in the business it earns about ₹23 (ROCE = return on capital employed) and shareholders earn about ₹17 (ROE = return on equity); both are healthy.</i>
Debt	Borrowings ~₹15 cr — <i>almost debt-free, so profits are not eaten up by interest and the balance sheet is safe.</i>
Track record (5 years)	Sales CAGR ~26%, profit CAGR ~103% — <i>CAGR = the smoothed yearly growth rate; sales have compounded at about a quarter a year and profit far faster as margins improved.</i>
Dividend	0% payout — <i>it pays no dividend and reinvests all profit back into growth and new plants.</i>

2. Concall coverage

No concall transcripts were available on Screener — this report is based on a global web deep-dive. Kingfa India does not hold regular earnings conference calls, so there are no quarterly transcripts to read. The analysis below is instead built from the company's own filings, its Annual General Meeting record, results press releases and credible financial media.

Sources used: Screener.in company page (KINGFA); Kingfa India investor site kingfaindia.com incl. the 40th AGM transcript (Sep 2024); MarketsMojo result analyses (Q3 FY26, Q4 FY26); Whalesbook / ScanX / EquityBulls result and corporate-action news; Plastemart industry profile; company stock-exchange announcements on the ₹500 cr preferential issue and monitoring-agency reports. **Note on data:** the auto-scraped financial CSVs for this company contained only row labels and no values, so all financial figures here were taken directly from Screener and the news sources listed.

2b. Latest update highlights

Latest results — Q4 & full year FY26 (results declared 29 May 2026)

- **Record quarter.** Q4 FY26 revenue ₹578 cr, up 23.2% over a year ago, with net profit ₹59 cr, up 41.2% — *its biggest-ever quarter, and profit grew almost twice as fast as sales.*
- **Margins at a peak.** Q4 operating margin rose to 14.0% and quarterly PBDIT (operating profit) hit a record ₹81 cr — *the company kept more of each sales rupee than ever before.*
- **Full year delivered.** FY26 revenue ₹1,996 cr (+14.4%) and net profit ₹185 cr (+21.2%) — *a seventh straight run of yearly growth, with profit again outpacing sales.*
- **New plant live.** Commercial production started at the new Bhiwadi (Rajasthan) unit from 22 Feb 2026 — *fresh capacity is now switched on and starting to add to sales.*
- **Tone:** confident and expansion-focused; management describes "strong demand momentum" in industrial plastics. (Source: MarketsMojo Q4 FY26 analysis; ScanX/Whalesbook FY26 results news.)

2c. Business mix & capacity

Domestic vs export split (9M FY26): Domestic ~93% (₹1,320 cr) / Exports ~7% (₹97 cr). *Almost all sales are inside India — this is essentially a play on Indian demand for cars, appliances and electronics, not an export story. Exports are tiny but grew ~14%.*

Installed capacity: India's largest modified-plastics compounder, with more than 110,000 tonnes a year across Manesar (near Delhi), Chakan (Pune), Puducherry and the new Bhiwadi (Rajasthan) unit. *It can make over 1.1 lakh tonnes of compounded plastic annually — the biggest such capacity in the country.*

Capacity utilization: Not disclosed as a percentage — Kingfa India does not publish a utilization figure. *What we can see indirectly: it is spending heavily to add capacity (Bhiwadi now live, Chakan Phase 2 and a South India site underway), which signals existing plants are running full enough to justify more.*

3. Earning Trigger thesis

The trigger: a funded, multi-site capacity build-out feeding strong domestic demand

The clearest earnings driver is **a large, financed expansion of manufacturing capacity** aimed at India's growing appetite for engineering plastics in cars, appliances, electricals and — increasingly — electric vehicles (EVs). In September 2025 Kingfa raised **₹500 crore through a preferential share issue** earmarked for capital spending, brought in an independent monitoring agency, and set June 2027 to finish deploying it. It has already switched on a new Rajasthan plant, is expanding the

Chakan (Pune) plant and R&D centre, and has bought land in South India. With almost no debt and returns above 20%, adding capacity into steady domestic demand is a credible way to keep compounding profit.

Trigger	What the public record says	Evidence so far	Time horizon	Strength
Capacity expansion (₹500 cr issue + new plants)	₹500 cr preferential issue (Sep 2025) for capex; new Bhiwadi plant, Chakan Phase 2, South India land; funds to be fully deployed by Jun 2027.	Bhiwadi live from Feb 2026; ₹155.8 cr of the ₹500 cr already deployed by May 2026 per the independent monitoring agency — spending is on track.	Now → FY27/ FY28	Strong Funded, already underway, independently monitored.
Steady domestic demand for engineering plastics	Growth tied to Indian autos, appliances, electricals and electronics — the sectors it supplies.	7 straight quarters of year-on-year growth; FY26 sales +14.4%, profit +21.2%.	Ongoing	Strong Proven, consistent volume-led growth.
Margin expansion	Richer product mix and scale lifting profitability.	Operating margin rose 12.4% (FY24) → 12.9% (FY25) → ~13% (FY26) → 14.0% in Q4 FY26.	Now → next 1-2 yrs	Strong Clear, measurable, still rising.
EV & green-materials products	Flame-retardant plastics for EV battery packs, lightweight composites, recycled/ circular-economy grades.	Announced as a focus area; no separate revenue disclosed yet.	Medium term	Moderate Promising direction, but size not yet visible.

4. Management Consistency scorecard

Period	What was said / planned	What actually happened	Verdict
FY24 → FY25 (AGM Sep 2024)	Grow volumes and profit off India's largest compounding capacity; keep margins improving.	FY25 sales +17.3% to ₹1,744 cr, profit +24.7% to ₹153 cr, margin up to 12.9%.	Delivered
FY25 → capex plan	Fund a big expansion: raise ₹500 cr, add plants (Rajasthan, Chakan Phase 2, South India).	₹500 cr raised Sep 2025; Bhiwadi live Feb 2026; monitoring agency confirms funds deployed on plan.	Delivered / on track
FY26 (year to Mar 2026)	Continue the growth-plus-margin story.	Sales +14.4% to ₹1,996 cr, profit +21.2% to ₹185 cr, record Q4 margin 14.0%.	Delivered
Balance-sheet discipline	Stay lightly geared while investing.	Borrowings ~₹15 cr; expansion funded by equity, not debt.	Delivered
EV / green materials	Build presence in EV and recycled-plastics grades.	Named as a focus; contribution not yet quantified.	Too early

Narrative drift: The story has stayed remarkably steady rather than drifting. For three years the message has been the same — use India's largest compounding capacity, expand it with equity funding, ride

domestic auto/appliance/electronics demand, and lift margins with a better product mix — and the numbers keep matching the message (seven straight quarters of growth, margins rising every year, the ₹500 cr being spent on schedule under an independent monitor). The one genuine limitation is evidentiary: because Kingfa India holds no quarterly concalls, this consistency is read from filings, the AGM and results rather than from repeated, granular management guidance. Within that limit, there is no sign of a shifting story or broken promise.

5. Bottom line

Durable earning trigger? → YES

There is a clear, concrete and still-live driver: a fully funded ₹500 cr capacity expansion (new Rajasthan plant already running, Chakan and South India next) feeding strong, home-grown Indian demand for engineering plastics — and it is already showing up in the numbers, with a record Q4 FY26, seven straight quarters of growth and margins climbing to 14%. The company is almost debt-free and earns over 20% on capital, so the expansion should convert into profit rather than just interest bills. The only softer piece is the EV/green-materials angle, whose size is not yet visible; but the core capacity-plus-demand trigger is real and playing out.

Management consistent? → YES

Management has largely done what it said and the story has not changed: it promised expansion funded by equity and delivered it (₹500 cr raised, Bhiwadi commissioned, funds deployed on schedule under an independent monitoring agency), while margins and profit rose every year as claimed. The honest caveat is that Kingfa India does not hold earnings concalls, so we are judging consistency from filings, the AGM and results rather than from detailed quarterly guidance — a thinner evidence base than a company that talks to investors each quarter. Even so, on everything that can be checked, the promised-versus-delivered record is clean, which earns a Yes rather than a Maybe.

Prepared 04 July 2026. NO-CONCALL web deep-dive; no Screener transcripts exist for this company. Figures from Screener.in and cited financial media; the auto-scraped CSVs held no values. Not investment advice.
