

Navin Fluorine International Ltd

Concall Tracker — earning-trigger & management-consistency read · Report date 5 July 2026 · Ticker NAVINFLUOR (Screener.in)

1. Snapshot

What the business does (one line): Navin Fluorine is an Indian specialty-chemicals maker built around fluorine chemistry. It sells refrigerant gases and inorganic fluorides (its "High Performance Products" arm), makes complex fluorine-based specialty molecules for global agrochemical and industrial customers, and runs a contract-manufacturing arm (CDMO — Contract Development and Manufacturing Organisation) that makes advanced ingredients for global pharma innovators. It earns money mostly by supplying hard-to-make fluorinated chemicals under multi-year contracts, many of them exported.

Number (latest)	Value	Plain-English read
Market value	₹ 38,743 cr	What the whole company is worth on the stock market — a large-cap chemical firm.
Revenue FY26 (consolidated)	₹ 3,314 cr	Total sales for the year to March 2026 — up about 41% on the prior year, its fastest growth in years.
Net profit FY26 (consolidated)	₹ 664 cr	Money left after all costs and tax — more than double (up ~130%) versus ₹289 cr the year before.
Operating margin FY26	32.6%	For every ₹100 of sales, about ₹33 is operating profit — up sharply from ~23% a year earlier.
Return on capital (ROCE)	21.3%	The business earns about ₹21 a year on every ₹100 of capital put to work — a healthy return.
Price-to-earnings (P/E)	78.6	The share trades at roughly 79 times yearly profit — a rich, high-expectation valuation.

Data note (important): Screener.in's downloadable financial tables for Navin are the **standalone** parent-company figures (they show FY26 sales of ₹2,302 cr and profit of ₹488 cr). Management reports and guides on a **consolidated** basis, which includes the big Dahej subsidiary that houses the newest plants (FY26 consolidated sales ₹3,314 cr, profit ₹664 cr). This report uses the **consolidated** numbers taken from the earnings calls, because that is the real operating picture. The gap between the two is the subsidiary's contribution.

2. Concall coverage

15 distinct earnings-call transcripts were read, covering every quarter from Q4 FY22 (May 2022) to Q4 FY26 (April/May 2026) — about four straight years. The most recent call (Q4 FY26) came through on Screener only as a broken non-PDF link, so its content was **web-filled** from the company's results release and published transcript summaries (marked below).

Quarter	Call date	Transcript read?
Q4 FY22	May 2022	Yes
Q1 FY23	Jul 2022	Yes
Q2 FY23	Oct 2022	Yes
Q3 FY23	Feb 2023	Yes

Q4 FY23	May 2023	Yes
Q1 FY24	Aug 2023	Yes
Q2 FY24	Oct/Nov 2023	Yes
Q3 FY24	Feb 2024	Yes
Q1 FY25	Jul/Aug 2024	Yes
Q2 FY25	Oct 2024	Yes
Q3 FY25	Jan/Feb 2025	Yes
Q4 FY25	May 2025	Yes
Q1 FY26	Jul 2025	Yes
Q2 FY26	Oct 2025	Yes
Q3 FY26	Feb 2026	Yes
Q4 FY26	Apr/May 2026	Web-filled (Screener link broken)

Note: the Q4 FY24 (May 2024) transcript was not available on Screener and was skipped; coverage of the surrounding period is otherwise complete. One duplicate copy of the Q3 FY24 file was ignored.

2b. Latest concall highlights — Q4 & full-year FY26 (call ~29–30 April 2026)

- **Record results, sixth straight up-quarter.** Q4 FY26 sales were ₹938 cr, up 34% on a year earlier; net profit was ₹213 cr, up 124% (more than double). For the full year, sales hit ₹3,314 cr (up 41%) and profit ₹664 cr (up 130%). Plain read: the business is not just growing, its profit is growing far faster than its sales — a sign of strong operating leverage.
- **Margins jumped.** Full-year operating margin reached 32.6% (about ₹33 profit per ₹100 of sales), up from ~23% — a near-10-percentage-point improvement as new plants filled up.
- **Big new capacity confirmed.** A new refrigerant (HFC / R32) line of up to 15,000 tonnes a year is on track to start in the Oct–Dec 2026 quarter, costing ₹236.5 cr and capable of ₹600–825 cr of yearly sales at full run. Plain read: a large, funded growth lever that starts turning within a year.
- **Two more projects near the finish line.** The Chemours partnership plant (data-centre cooling fluid) is due to start June/July 2026, and the CDMO's new cGMP4 pharma plant is already supplying customers.
- **Tone:** Confident. Management guided to sustaining roughly 30% operating margins with better working-capital use and said it has "clear visibility" into FY27 growth. Dividend raised to ₹8.6 a share.

2c. Business mix & capacity

Domestic vs export split: Management did **not** give a clean India-vs-exports percentage on the calls read. What is clear from the content is that exports are a large share — the refrigerant/HFO plant (built for Honeywell), the Chemours cooling-fluid tie-up, and the CDMO's main customers (European and US pharma innovators) are all export-facing, while the agrochemical specialty book serves both Indian and global majors. Plain read: this is an export-heavy chemical exporter, but the exact split was not quantified — do not assume a number.

Capacity utilisation: By late FY26 the older plants — the Honeywell/HFO refrigerant line, the dedicated agro-specialty plant at Dahej, and the R32 line commercialised in March 2025 — were described as running at or near optimal (full) capacity, which is exactly why margins rose. Fresh headroom is being added through the new 15,000-tonne R32 line (Q3 FY27), the Dahej MPP de-bottlenecking (Q3 FY27), the AHF acid plant (already commissioned FY26) and the Chemours plant (Q1 FY27). Plain read: existing plants are largely full, so the next leg of growth depends on these new lines starting on time.

3. Earning-trigger thesis

The headline: Navin's earnings engine is a **multi-year capital-spending programme** — a series of new fluorine-chemistry plants (refrigerants/R32 and HFC expansion, a large hydrofluoric-acid plant, dedicated agro-specialty plants, new pharma contract-manufacturing capacity, and an advanced-materials tie-up with Chemours for data-centre cooling fluid). Management said for four years that these plants, mostly backed by multi-year MNC contracts, would lift sales and profit as they came online. In FY25 and especially FY26 that is exactly what happened: sales rose 41% and profit doubled as plant after plant filled up. The trigger is concrete, largely contracted, and visibly playing out — with a further leg (the 15,000-tonne R32 line and Chemours plant) due to land in FY27.

Trigger	What management said	Evidence so far	Time horizon	Strength
Refrigerants & HFC/R32 expansion	Convert/add R32 capacity, then a big new 15,000-tonne R32 line (₹600–825 cr peak sales) using its global refrigerant quota.	R32 line commercialised Mar 2025 and ran full; drove HPP arm to record revenue. New 15,000-tonne line funded, on track.	Delivered + more by Q3 FY27	Strong — already delivering, next leg funded.
Dedicated agro-specialty plants (Dahej)	₹540 cr "building-block" plant + MPP plants under multi-year MNC contracts, ~₹600 cr peak sales.	Commissioned FY23–FY24; specialty hit record quarterly revenue by FY26 (Q3 FY26 specialty +60%).	Delivered	Strong — commissioned and ramping.
CDMO (pharma contract manufacturing)	Reach ~US\$100m yearly sales; new cGMP4 plant + multi-year deals with European/US innovators.	cGMP4 commissioned and supplying (FY26); CDMO grew ~59% in FY26. But \$100m target slipped to "aspirational by FY27."	Largely delivered; \$100m still pending	Moderate–Strong — real growth, headline target late.
AHF (hydrofluoric-acid) plant	New 40,000-tonne acid plant at Dahej to feed pharma, agro, EV-battery and solar chemicals.	Commissioned in FY26, commercial supply started.	Delivered	Strong — on-stream, secures raw-material chain.
Advanced Materials (Chemours / data-centre cooling)	Make Chemours' "Opteon" immersion-cooling fluid for AI data centres; new capex, part customer-funded.	Announced Q4 FY25; plant due June/July 2026 (Q1 FY27). Not yet earning.	FY27	Unproven — promising but revenue not started.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY22–FY23	Commission the Honeywell/HFO refrigerant plant, MPP and dedicated agro plants; deliver record FY23.	All three plants commissioned on schedule; FY23 sales crossed ₹2,000 cr, all divisions hit records.	Delivered
FY24 (the hard year)	Keep margins near 24–25%, ramp new molecules, grow through the year.	Agrochemical destocking + one-off plant shutdowns hit hard; margin fell to ~17% for the year; MD left mid-year. A clear cyclical stumble.	Missed (cyclical)
New MD, FY25	New MD (Nitin Kulkarni) to lift utilisation; "story of two halves," recovery in H2 FY25.	Recovery arrived on cue: margin climbed quarter by quarter to 25.5% by Q4 FY25; R32 line commercialised. FY25 sales +14%.	Delivered
FY26	Ramp cGMP4, AHF and R32; sustain higher margins; approve new HFC and MPP capex.	cGMP4 and AHF commissioned and supplying; margins hit 32.6%; new 15,000-tonne R32 (₹236.5 cr) and MPP de-bottlenecking approved. Sales +41%, profit +130%.	Delivered
CDMO US\$100m target	Reach ~US\$100m CDMO sales by ~FY26.	Strong growth (~59% in FY26) but the ₹-equivalent still below \$100m; target re-described as "aspirational by FY27."	Partly / late
Chemours / advanced materials	New cooling-fluid plant operational by Q1 FY27.	On track as of Q3 FY26; start due June/July 2026. Not yet proven.	Too-early

Narrative drift: Remarkably little. The core story — "we are building fluorine-chemistry plants under long-term MNC contracts and they will lift earnings" — has stayed steady for four straight years. The same project names (HFO/Honeywell, R32/HFC, the ₹540 cr agro plant, AHF acid plant, cGMP4 CDMO, and now Chemours) recur call after call, each moving predictably from "announced" to "on track" to "commissioned." Management was also candid, not evasive, during the FY24 downturn — they flagged destocking and shutdowns openly rather than spinning them. The one honest blemish is the CDMO \$100m target, which kept its wording but slipped its date. The tone arc — confident (FY23) → defensive (FY24) → cautiously recovering (FY25) → strongly confident (FY26) — tracked the actual results rather than running ahead of them.

5. Bottom line — two verdicts

Durable earning trigger? → YES

There is a clear, concrete, still-live driver, and it has visibly delivered. A four-year plant-building programme — refrigerants/R32, the ₹540 cr agro plant, the AHF acid plant, cGMP4 pharma capacity — has moved from blueprints to full plants, driving FY26 sales up 41% and profit up 130% with margins near 33%. Crucially the engine is not spent: a funded 15,000-tonne R32 line (₹600–825 cr of potential sales) and the Chemours cooling-fluid plant are due in FY27. The main caveat is valuation, not the business — at ~79 times earnings the market already expects a lot, so the trigger must keep delivering to justify the price. But on the business question the answer is a firm Yes.

Management consistent? → YES

Over four years management largely promised and largely delivered: plants were commissioned on or near schedule, the story never lurched into a new theme, and when FY24 turned tough they explained the miss honestly rather than hiding it. The record is not spotless — the CDMO US\$100m goal kept slipping its timeline (now "aspirational by FY27"), and FY24 margins fell well short before recovering — so this is a strong Yes rather than a perfect one. But the promised-versus-delivered thread is steady and credible, and the newest promises (cGMP4, AHF, the new R32 line) are being kept on time.
