

Raghav Productivity Enhancers Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: RPEL · BSE: 539837 · formerly Raghav Ramming Mass Ltd · Report prepared 3 Aug 2026 · **Continuity update** to the Q4-2026 report

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public filings, investor decks and financials. This company still holds **no question-and-answer earnings call** — see the coverage note in Section 2.

1 Snapshot

What the business does: Raghav is the world's largest maker of **silica ramming mass** — the heat-resistant sand-and-chemical lining that is packed inside an **induction furnace** (an electric furnace that melts scrap steel). The lining burns out and must be replaced every few weeks, so it is a *consumable*: every steel plant, foundry and casting unit running an induction furnace is a repeat buyer, for as long as the furnace runs. Raghav sells a premium, longer-lasting, custom-fitted version and charges more for it. Head office and plants are in Jaipur, Rajasthan.

Measure	Value	What it means in plain words
Market cap	₹5,587 cr	What the whole company is worth on the stock market. Share ≈ ₹1,246; 52-week range ₹561–₹1,372. Up from ₹4,500 cr / ₹970 at our last report — the shares have run ~28% in a month.
Q1 FY27 revenue	₹86.9 cr	Sales in the June-2026 quarter, up 48.7% on the ₹58.5 cr of a year earlier. The biggest quarter the company has ever had.
Q1 FY27 net profit	₹19.6 cr	Profit after every cost and tax, up 67.6% on ₹11.7 cr a year ago. Profit grew far faster than sales — each rupee of sales earned more.
Q1 FY27 volume	97,000 tonnes	Physical quantity of ramming mass sold, up 25% on a year earlier. Real product out of the gate, not an accounting effect.
Q1 FY27 operating margin	29.6%	Operating profit (₹25.7 cr) as a share of sales. Out of every ₹100 of sales, ₹29.6 is operating profit before interest, tax and depreciation — very high for a manufacturer.
FY26 full year	₹257 cr / ₹55 cr	Sales and net profit for the year to March 2026, up 29% and 48%. Q1 FY27 is running at a pace well above that.
Trailing-12-month profit	₹63 cr	Last four quarters combined, against FY26's ₹55 cr. Earnings are still climbing, quarter after quarter.
Borrowings (Mar 26)	Nil	No debt at all against ₹204 cr of shareholder money. Growth is funded entirely from the company's own cash.
ROCE (FY26, consolidated)	30%	Return on capital employed — profit earned per ₹100 of capital in the business. ₹30 is excellent and marks a genuinely high-quality business.
Price-to-earnings (P/E)	~89x	Share price divided by last-12-months earnings per share. You pay ₹89 for ₹1 of annual profit. Very expensive — the growth is real, but so is the price being asked for it.

2 Concall coverage — split view

Period	Source / date	Read?
FY22 → FY25 decks (4 annual investor presentations)	Jul 2022 → Aug 2025	Carried forward as backstory from the Q4-2026 report — not re-read
FY26 deck + Q4 FY26 results (the prior report's boundary)	24 Apr 2026	Boundary — covered in full by the Q4-2026 report
Q1 FY27 results + investor update	16 Jul 2026	Newly deep-read in full ★
Patent-grant disclosure (subsidiary)	24 Jul 2026	Newly deep-read in full ★

Important coverage caveat — unchanged from last time. Raghav does **not** hold a question-and-answer earnings concall. Screener.in lists six entries under its concall section (Jun 2021, Jul 2022, Jul 2023, Aug 2024, Aug 2025, Apr 2026) but every one of them is an *investor-presentation slide deck*, roughly one a year — the automated transcript download returned zero transcripts on this run, exactly as it did for the Q4-2026 report. So there is no spoken Q&A to test management against; the reading below is built on management's own written disclosures, the audited/reviewed numbers, and independent coverage. That is a weaker evidence base than a transcript and is weighted accordingly in Section 4.

★ Latest highlights — Q1 FY27 results & investor update (16 July 2026)

- **Biggest quarter ever, on every line.** Revenue ₹86.91 cr (+48.7% on last year, +23% on the March quarter), operating profit ₹25.74 cr, net profit ₹19.57 cr (+67.6%), earnings per share ₹4.26 against ₹2.54. *Every headline number is a company record, and the March quarter was itself a record — so this is acceleration, not a bounce off a weak base.*
- **Growth is half volume, half price — which is the good kind.** Volume was **97,000 tonnes, up 25%**. Revenue rose 48.7%. Do the arithmetic and average realisation went from roughly ₹7,540 to ₹8,960 a tonne — **about 19% more money per tonne sold**. *Raghav sold a quarter more product AND charged a fifth more for it. That is pricing power, not just a busy factory.*
- **The profit is operating profit, not a one-off.** The standalone accounts include ₹4.56 cr of dividend received from the wholly-owned subsidiary, but that is cancelled out in the consolidated figures used above. Interest cost was ₹0.16 cr. *Nothing is propping up the ₹19.57 cr except the business itself — plus a lower tax rate of 20.9%, which flattered profit by a few crore.*
- **The capacity expansion is on schedule.** The brownfield add (extra lines at an existing plant, so cheap and quick) taking group capacity from **414,000 to 534,000 tonnes a year for ~₹20 cr** is confirmed on track for **October 2026**. Management also restated a long-range ambition of **1 million tonnes a year** and 30% market share. *The near-term promise from the last report is being kept; the 1-million-tonne figure is an aspiration with no date attached.*
- **Exports came back.** Export volumes rose **34% over the March quarter** despite higher ocean-freight costs. *Last report's one soft spot — exports stalled by Iran-war shipping disruption — has visibly repaired itself, exactly as management said it would.*
- **Two process patents granted (24 Jul 2026).** Wholly-owned subsidiary Raghav Productivity Solutions Pvt Ltd received Indian patents 596802 and 596666, covering a fine-cone-crusher method and a multi-deck vibrating screener — both quartz-processing techniques, valid 20 years. *Useful defensive intellectual property on how it makes the product cheaply and consistently. It is not the "value-add product" revenue that has been promised since FY24 — don't confuse the two.*

Business mix & capacity. Capacity utilisation ≈ 94% (our calculation, not a disclosed figure). Group capacity is 414,000 tonnes a year; Q1 FY27 volume of 97,000 tonnes annualises to 388,000 tonnes, or ~94% of nameplate. The same method on Q4 FY26 (90,000 tonnes) gives 87%, which is exactly what management disclosed for that quarter — so the method checks out. *The plants are close to physically full, with only about 6% headroom left. This is why the October-2026 expansion matters so much: without it, volume growth stops in a couple of quarters.*

Domestic vs export split: not disclosed for Q1 FY27. Management gave only the growth rate (export volumes +34% quarter-on-quarter), not a rupee or tonnage split for the quarter. The last full disclosure was FY26: roughly **80,000 of 332,000 tonnes exported ≈ 24% exports / 76% domestic by volume**, shipped to 39 countries. *We will not invent a Q1 number. Treat "about a quarter exported" as the working assumption, probably a little higher now given exports grew faster than the total.*

Market share ~14% of India's silica-ramming-mass market, up from ~3.5% at listing in FY16, against a stated target of 30%. *Still a small fish in its own pond — most of the market is tiny unbranded local producers, which is where the share keeps coming from.*

★ Since our last report

This builds on the **Q4-2026 report (prepared 4 July 2026)**, whose coverage stopped at the **FY26 investor deck and Q4 FY26 results of 24 April 2026**. That report's two verdicts were **Durable earning trigger? YES** and **Management consistency? YES**. One new reporting event has happened since: the Q1 FY27 results of 16 July 2026 (plus the 24 July patent disclosure). Here is what it did to each prior conclusion.

Prior read	What we said then	What the new quarter shows	Movement
Verdict 1 — Earning trigger	YES — a volume-plus-margin flywheel: cheap capacity, share gains, premium pricing. FY26 sales +29%, profit +48%.	Q1 FY27 sales +48.7%, profit +67.6%, volume +25%, realisation +19%, margin held at 29.6%. Growth <i>accelerated</i> rather than fading.	Confirmed
Verdict 2 — Management consistency	YES — decade of doing what the slides said, especially on capacity and margins.	Every live promise either delivered or on schedule; no target quietly dropped; no new unrelated venture announced.	Confirmed
Promise: capacity 414k → 534k tonnes by Oct 2026 for ~₹20 cr	"Strong — concrete, cheap, and past adds were absorbed fast."	Explicitly reconfirmed as on track for October 2026. Utilisation has tightened from 87% to ~94%, so it is arriving just in time.	On-track
Promise: exports recover after the Iran-war disruption	Flagged as the one soft spot; management claimed exports "resumed normalcy from April 2026".	Export volumes +34% quarter-on-quarter despite higher freight. The claim was tested one quarter later and held.	Improving
Promise: market share 14% → 30%	"Strong — long, unbroken track record of taking share."	25% volume growth in a steel market growing far slower means share is still being taken. Target restated, now alongside a 1-million-tonne capacity ambition.	On-track
Promise: raise realisation / margin every year	"Strong — margins have genuinely expanded" (23% → 29% over five years).	Realisation per tonne +19% year-on-year; operating margin 29.6%; net margin up 253 basis points to 22.5%. Margin dipped 47 basis points on the March quarter on higher employee cost — trivial.	Confirmed
Promise: value-add products (artificial marble, semiconductor crucibles, foundry)	"Unproven — promising optionality, not yet in the numbers."	Still no revenue disclosed. The two new patents are <i>process</i> patents for making ramming mass more efficiently — not the new-product revenue promised since FY24.	Unchanged

Net effect: both verdicts stay at YES, and both are unchanged rather than upgraded. They are unchanged, not upgraded, for a deliberate reason — the quarter delivered everything the prior report said it should, which strengthens conviction but does not change the answer to a yes/no question that was already Yes. Nothing was downgraded. The only prior read that did not move is the value-add-products ambition, which has now been talked about for three years without a rupee of disclosed revenue. Two *new* cautions appear that the last report did not carry: the shares have re-rated to ~89x earnings, and working capital keeps stretching (see Section 5).

★ 3. Earning-trigger thesis

The engine is a **volume-plus-price flywheel**. Raghav adds capacity brownfield — bolting lines onto existing plants for a fraction of what a new factory costs — and fills it by taking share from small unbranded local producers, while charging a premium for a lining that lasts longer and is fitted to the customer's specific furnace. Q1 FY27 is the clearest proof yet that both halves work at once: **25% more tonnes sold AND 19% more revenue per tonne**. Under it sits a structural tailwind that does not depend on management at all — induction furnaces keep taking share of India's steel output, and every one of them is a permanent, repeat buyer of a consumable that burns out. The near-term catalyst is concrete and dated: capacity goes up 29% in October 2026, into plants already running at ~94%.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Capacity expansion 414k → 534k tonnes/yr	+120,000 tonnes for ~₹20 cr, live by October 2026; brownfield, low capex.	Reconfirmed on track in July 2026. Past adds were delivered: 288k (FY24) → 414k (FY25). Utilisation now ~94%.	Live now → FY27	Strong	↑ improving — the deadline was reconfirmed a quarter closer with no slippage, and tighter utilisation makes the new tonnes more certain to be absorbed.
Premium pricing / realisation	"Highest price, lowest cost" — raise realisation every year.	Realisation ~₹7,540 → ~₹8,960 a tonne year-on-year (+19%); operating	Ongoing	Strong	↑ improving — last report showed margin expansion over five years; this quarter

margin held at 29.6% while volumes grew 25%.

shows it holding under a 25% volume surge, which is harder.

Market-share gains	Grow from ~14% to 30% of India's market; long-range 1 million tonnes a year.	Share 3.5% (FY16) → 14% (FY26); 25% volume growth in a slow-growing steel market means the climb continues.	Multi-year	Strong	Unchanged — a decade-long trend extended by one more quarter; no new information that changes the slope.
Exports	India's largest ramming-mass exporter; keep adding countries (39 today).	Volume 13k (FY20) → 80k (FY26) tonnes. The FY26 Iran-war stall reversed: +34% quarter-on-quarter in Q1 FY27.	Ongoing	Strong (was Moderate)	↑ improving — upgraded from Moderate. The geopolitical air-pocket flagged last quarter has demonstrably closed.
Value-add / new products (artificial marble, semiconductor crucibles, foundry)	Use in-house R&D to enter higher-value silica markets and scale foundry sales.	Three years of stated intent, a government-recognised R&D lab, two new <i>process</i> patents — but still no disclosed revenue from any of it.	2–4 years	Unproven	Unchanged — the patents are about making the existing product cheaper, not about selling a new one. Still pure optionality.

4 Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 deck (Aug 2024)	A further new line would "double capacity" at minimal capex.	Built. Capacity went 288k (FY24) → 414k (FY25), and the next add to 534k is underway.	Delivered
Every deck, a decade	Keep taking domestic market share with a premium, custom product.	3.5% (FY16) → 11% (FY22) → ~14% (FY26), and 25% volume growth in Q1 FY27. Steady, unbroken climb.	Delivered
Every deck	"Improve realisation and margin every year."	Operating margin 23% (FY21) → 29% (FY26) → 29.6% (Q1 FY27); realisation per tonne +19% year-on-year. FY25 dipped to 27% then recovered.	Delivered
FY26 deck (Apr 2026)	Capacity to 534,000 tonnes for ~₹20 cr, operational by October 2026 .	Reconfirmed on track in the July 2026 update, one quarter closer, with no cost revision. Not finished yet — judge in the December quarter.	On-track
FY26 deck (Apr 2026)	Exports "resumed normalcy from April 2026" after the Iran-war shipping disruption.	Tested one quarter later and true: export volumes +34% quarter-on-quarter despite higher ocean freight.	Delivered
FY24 deck onward	New plant to make higher-value / value-add products (artificial marble, semiconductor-grade crucibles); scale the foundry segment.	Three years on, still no disclosed revenue. Reframed but never quantified. The July 2026 patents are process improvements, not new products.	Slipping
Jul 2026 update	Long-range ambition of 1 million tonnes a year capacity and 30% market share.	New, and deliberately undated. Nothing to judge yet — but note it is 2.4x the capacity that exists today.	Too-early
FY23 → FY24 (a caution flag)	Continuous revenue growth.	FY24 consolidated revenue dipped ₹137 cr → ₹133 cr even as volume rose — a realisation soft patch — before rebounding hard through FY25 and FY26.	Partly

Narrative drift. Remarkably little, and the new quarter adds none. The story has been the same for ten years — premium product, cheap in-house-designed brownfield capacity, share gains from unbranded local rivals, exports, and a slow move up the value chain — and the July 2026 update repeats it word for word rather than pivoting. The two things the last report flagged as open both resolved in management's favour within one quarter: the capacity deadline was reconfirmed, and the export stall reversed. Promoter holding is rock-steady at **62.89%** with no pledging and no dilution, and there is still zero debt. The one genuine blemish is now three years old and getting older: the **value-add-products ambition**, talked about since FY24, has never produced a disclosed rupee. That is not dishonesty — nothing was claimed as achieved — but it is a slide that keeps appearing without ever converting, and it is why this row moved to "Slipping". The fresh caution is the **1-million-tonne** figure introduced in July: undated aspirations are how consistent managements start becoming inconsistent ones, and it should be watched. Finally, the honest structural limit remains — with no Q&A concall, nobody gets to press management on any of this in public. Everything above is management's written word checked against reviewed numbers, which is a real but incomplete test.

Durable earning trigger? → YES

vs last quarter: unchanged

What moved it: nothing needed to — the June quarter delivered precisely what last quarter's thesis predicted, only faster. Revenue +48.7%, profit +67.6%, volume +25% and realisation +19% at the same time, with operating margin holding at 29.6%. Selling a quarter more product while charging a fifth more for it is the flywheel working exactly as described, and it is now backed by a dated near-term catalyst: capacity rises 29% to 534,000 tonnes in October 2026, into plants our own calculation puts at ~94% full. Exports, the single soft spot in the last report, reversed within one quarter (+34%). Underneath sits a structural tailwind Raghav does not have to manufacture — induction-furnace steelmaking keeps gaining share of Indian steel output, and every furnace is a permanent repeat buyer of a lining that burns out. Zero debt, 30% return on capital, cash-funded growth. **Two honest caveats, neither fatal.** First, the exciting new legs — value-add silica, semiconductor-grade crucibles, foundry — remain worth exactly zero disclosed rupees after three years of slides; the YES rests entirely on the core consumable business, and should. Second, working capital keeps stretching: standalone inventory days have gone 155 (FY23) → 248 (FY26) and the cash conversion cycle 155 → 299 days, so a growing slice of each year's profit sits in stock rather than cash. That is a quality-of-growth watch item, not a reason to doubt the trigger. Separately, and outside the verdict: at ~89x earnings the market has already priced a great deal of this in.

Management consistent? → YES

vs last quarter: unchanged

What moved it: two live promises came due this quarter and both were kept. The export recovery management asserted in April — "resumed normalcy from April 2026" — was verifiable one quarter later and true (+34% volumes). The October-2026 capacity deadline was reconfirmed on schedule and at the same ₹20 cr cost, with no quiet slippage. That is the pattern of the whole decade: the promised capacity doublings were actually built, market share climbed 3.5% → 14% as claimed, margins expanded 23% → 29.6% as claimed, the balance sheet stayed debt-free, and promoter ownership has not budged from ~62.9% with nothing pledged. The story in the July 2026 deck is the same story as the FY22 deck, which is rarer than it sounds. **What keeps this from being an upgrade rather than a repeat YES:** the value-add-products ambition has now been promised for three years without a single disclosed rupee, and July introduced a brand-new, entirely undated 1-million-tonne aspiration — 2.4x today's capacity — which is the kind of number that is easy to say and hard to be held to. And the structural caveat from last time stands unchanged and must be repeated: **Raghav holds no question-and-answer earnings call**, so this verdict is built on written slide targets checked against reviewed results, never on management being pressed by an analyst in public. On that evidence the record is clearly consistent — but it is a record graded on a slightly easier exam than most companies sit.

Sources: Raghav Productivity Enhancers Ltd Q1 FY27 unaudited consolidated and standalone results filed with BSE/NSE, 16 July 2026 (limited review by Ravi Sharma & Co, unmodified); company investor update / presentation for Q1 FY27; BSE disclosure of patent grants to Raghav Productivity Solutions Pvt Ltd, 24 July 2026; FY26 investor deck "10 Years of Excellence", 24 April 2026 (carried forward); Screener.in standalone and consolidated financial history — profit & loss, quarterly results, balance sheet, cash flow, ratios and shareholding, FY15 to Q1 FY27; independent coverage from EquityBulls, MarketsMojo, Business Standard / Capital Market, Whalesbook, ScanX and Groww.

A note on the numbers: headline figures are *consolidated* (Q1 FY27 revenue ₹86.91 cr, net profit ₹19.57 cr). Screener's default quarterly table is *standalone* and shows ₹35.76 cr and ₹12.42 cr for the same quarter, the latter including ₹4.56 cr of dividend from the wholly-owned subsidiary that disappears on consolidation. Both are correct on their own basis. The ~94% capacity-utilisation figure is our own calculation from disclosed volume and nameplate capacity, not a company disclosure; the same method reproduces management's disclosed 87% for Q4 FY26. Working-capital ratios quoted are standalone. Acronyms: EBITDA = earnings before interest, tax, depreciation and amortisation (operating profit); ROCE = return on capital employed; P/E = price-to-earnings ratio; MTPA = tonnes per annum; ramming mass = the heat-resistant silica lining packed inside an induction furnace. This is a research summary, not investment advice.
