CONCALL TRACKER · Q1 FY27 CONTINUITY READ

Minda Corporation Ltd

Screener ticker: MINDACORP · BSE 538962 · Prepared 6 Nov 2026 · Builds on the Q4-2026 report (12 calls, Q1 FY24 to Q4 FY26) and deep-reads the new Q1 FY27 call held 13 Aug 2026. This is the Spark Minda group company, not Uno Minda Ltd.

1. Snapshot: what the company is

Spark Minda makes **parts that go into vehicles**: wiring bundles (the vehicle's "nervous system"), locks and keys ("vehicle access"), aluminium die-cast metal parts and instrument clusters (the dashboard screen). It sells mainly to two-wheeler, commercial-vehicle, car and tractor makers in India, plus some exports. It makes more money by putting more and pricier parts into each vehicle, and it owns 49% of Flash Electronics, an electric-vehicle electronics maker.

₹1,846 cr

Q1 FY27 sales (April to June 2026), up 33% on a year ago. About ₹125 cr of that came from newly consolidated Minda VAST; without it growth was still around a quarter.

11.5%

Q1 operating margin (EBITDA, profit before interest, tax, depreciation, as a share of sales). About the same as last year, held despite costlier metals, labour and freight.

₹206 cr

Q1 net profit, but ₹106 cr of it is a one-time accounting gain from consolidating Minda VAST. The underlying profit is roughly half the headline.

₹2,500 cr

New lifetime orders won in the quarter (sales spread over the life of the vehicle programme), on top of a ₹10,000 cr book.

~22%

Indian vehicle production growth in the quarter. Minda grew faster than the industry, which is its whole pitch.

₹400 cr

Capex planned for FY27 across businesses. Plants are running at about 77-80% of capacity.

Figures are consolidated, as given on the Q1 FY27 call. Market value is not quoted because this report is capped at information available by 30 Sep 2026.

2. Concall coverage: what was read

This is a continuity report. Twelve calls from Q1 FY24 to Q4 FY26 were read in full for the Q4-2026 report and are carried forward as backstory. The one new call, Q1 FY27, was deep-read in full. Speakers: Executive Director Aakash Minda and Group CFO Ajay Agarwal.

Quarter(s)	Call date	Transcript read?
Q1 FY24 to Q3 FY26 (11 calls)	Aug 2023 to Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	22 May 2026	Read for the Q4-2026 report
Q1 FY27	**13 Aug 2026**	**Newly deep-read in full ★**

★ Latest concall highlights: Q1 FY27 (call held 13 Aug 2026)

- **Another record quarter.** Sales ₹1,846 cr (+33%) and operating profit ₹212 cr (+35%), the first time over ₹200 cr in a quarter. Wiring harness grew over 30% and instrument clusters over 35%.
- **Headline profit flattered.** Net profit ₹206 cr includes a ₹106 cr one-off gain from bringing Minda VAST (car locks, latches, door handles) onto the books. VAST's own margin is lower (about 8.4%, up from 6.5%), so it dilutes the group margin for now.
- **Flash Electronics still growing fast** (sales +42% to ₹533 cr) but its margin slipped to 15.4% on metal and labour costs. Management expects 20-24% growth and a 16-17% margin longer term. Its profit share to Minda fell this quarter.
- **New businesses on the clock.** Sunroof customer trials approved first time; production starts Q2 FY27. Turntide EV motor production from Oct-Nov 2026. Toyodenso switches now start in Q1 FY28, about a quarter later than the Q4 FY27 start talked of in May.
- **Tone: confident.** Reaffirmed the FY2030 goal of ₹17,500 cr sales and a 12.5% margin, and expects 11.5-12% margin for the rest of FY27. Cost pressure from metals, wages and freight is being passed to customers with a lag of a quarter or two.

2c. Business mix & capacity (quick glance)

Item	Latest figure	Plain read
Domestic vs export	India about 89% / exports about 11% (FY26)	Mostly an India-demand story. Exports are 8-10% of the order book, so they won't change the picture soon.
By product (Q1 FY27)	Wiring 32% · vehicle access 25% · clusters 16% · die casting 15% · other 12%	Locks and access jumped with VAST added.
By vehicle (Q1 FY27)	Two/three-wheelers 46% · commercial vehicles 27% · cars 19% · aftermarket 8%	Car share rose from about 14-15% to 19% with VAST, which is the plan to reduce dependence on two-wheelers.
Capacity use	About 77-80% across the group	Some room left; ₹400 cr of capex this year to keep adding lines.

★ Since our last report

Builds on the Q4-2026 report (boundary call 22 May 2026). Prior verdicts: **Trigger YES**, **Consistency MAYBE**.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	More and pricier parts per vehicle and a ₹10,000 cr order book finally converted in FY26.	Q1 growth beat a strong industry; wiring and clusters up over 30%; ₹2,500 cr fresh orders.	Confirmed
Consistency: MAYBE	Steady story and margins, but a habit of overpromising near-term growth and slipping timelines (sunroof slipped a year).	Sunroof and Turntide on schedule; switches pushed about a quarter; margin held.	Unchanged
Promise: sunroof JV production in FY27	Already a year late.	Trials approved; production Q2 FY27.	On-track
Promise: Toyodenso switches start Q4 FY27	Orders from Japanese carmakers, roughly ₹1,000 cr lifetime.	Start now Q1 FY28, about ₹150 cr in FY28, peak in FY29.	Slipping (slightly)
Watch: metal cost squeeze	Metal prices up 30-40%, mostly passed on.	Margin held at 11.5%; Flash margin dipped; pass-through lags a quarter or two.	On-track

Verdict change this quarter: Both verdicts unchanged. The trigger keeps showing up in the numbers. On consistency, two of the three new businesses are on time but switches slipped again by a quarter, and the profit headline needs the one-off gain stripped out, so it stays MAYBE.

★ 3. Earning-trigger thesis: the headline

More value in every vehicle. A plain lock becomes a smart key, a dial becomes a colour screen, a wire bundle gains high-voltage EV parts. On top of that come new businesses: car locks and latches through Minda VAST, sunroofs, switches with Toyodenso, EV motors with Turntide, and the 49% stake in Flash. The order book built since 2023 is now turning into sales, and Q1 FY27 grew faster than a very strong vehicle market.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
Content per vehicle (premiumization)	Pricier parts per vehicle every year; FY2030 ₹17,500 cr at 12.5% margin.	Wiring +30%, clusters +35% in Q1; margin held at 11.5%.	Multi-year	Strong	Unchanged
Order book converting	₹10,000 cr lifetime orders.	₹2,500 cr more added in Q1; sales +33%.	Rolling 4-5 yrs	Strong	↑ Improving
Minda VAST (car access)	Lift car share; kit value could roughly double.	Added ₹125 cr in Q1; car share up to 19%; margin 8.4%, below group.	1-3 yrs	Moderate	New in numbers
Flash Electronics stake	20-24% growth, 16-17% margin long term.	Sales +42%, EV sales +90%; margin dipped to 15.4%.	Ongoing	Moderate	Unchanged (margin ↓)
New JVs (sunroof, switches, Turntide)	Production FY27-FY28.	Sunroof Q2 FY27, Turntide Oct-Nov 2026, switches Q1 FY28.	FY27-FY29	Unproven	Mixed: two on time, one slipped

4. Management consistency scorecard

Period / theme	What was promised	What actually happened	Verdict
FY24-FY25 growth	20-25% a year for three years.	Grew 8-9% for two years, walked back (carried forward).	Missed
FY26 acceleration	Order book will convert.	Sales +22%, profit +40% (carried forward).	Delivered
Margin	Hold about 11% and move toward 12.5%.	11.5% in Q1 FY27 against tough costs; FY27 guide 11.5-12%.	Delivered
Sunroof JV	Production FY26, then FY27.	Slipped a year; now on track for Q2 FY27.	Partly
Toyodenso switches	Start Q4 FY27.	Now Q1 FY28.	Slipped a quarter
Turntide EV motors	Production FY27.	Lines set up, production from Oct-Nov 2026.	Too early

Narrative drift. The pillars haven't changed in three years: more share with existing customers, new customers, exports, premium parts, JVs, R&D. The growth number has: a bold 20-25% in FY24, walked back, then re-set once results turned. Now that growth is strong, the habit to watch is timelines on new businesses, which keep sliding by a quarter or a year. The Q1 profit figure also needs reading with care, since half of it is a one-time accounting gain.

5. Bottom line: the two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged

Still clearly playing out. Q1 sales grew faster than a strong vehicle market, operating profit crossed a new high and more orders came in. The caveats: part of the jump is VAST being added, VAST and Flash both run lower margins than the core right now, and the newest businesses don't earn until FY28.

Management consistent? → MAYBE · vs last quarter: unchanged

Nothing moved it enough. Margins were defended as promised and sunroof and Turntide are on schedule, which helps. But switches slipped again, the FY2030 target still rests on businesses that haven't started, and the headline profit leans on a one-off gain. Good execution on the core, patchy on timelines.
