

Venus Remedies Ltd — Concall Tracker

Research-driven injectable-medicines maker · Panchkula (Chandigarh) · Screener ticker VENUSREM · BSE 526953 · Report date 24 Jul 2026 · **Quarter folder Q1-2027** · Continuity update (builds on Q4-2026 report)

Coverage note — no concalls; continuity web deep-dive Venus Remedies still publishes **no earnings-call (concall) transcripts** on Screener.in — the company does not hold recorded analyst calls. As in the previous quarter, this report is built from a **global web deep-dive** (results releases, investor pages, credible financial media), not from concall transcripts. It is a **continuity update**: it carries the FY24–FY26 backstory forward from the Q4-2026 report and deep-reads only what is **new** — the Q1 FY27 (quarter ended June 2026) results reported ~19 Jul 2026. Judge the "promised-vs-delivered" read with that limit in mind: we track management against the public record, which is thinner than a run of quarterly calls.

1. Snapshot

What the business does: Venus Remedies makes **injectable medicines** (drugs given by injection/drip rather than tablets) — mainly antibiotics, fixed-dose antibiotic combinations, and increasingly higher-value cancer (oncology) injectables. Its in-house research arm (Venus Medicine Research Centre) invents new antibiotics. More than 70% of sales come from exports to 80-plus countries.

Number (latest)	What it means in plain words
Market value ~₹2,177 crore	What the whole company is worth on the stock market today (was ~₹2,298 cr last quarter — the share has drifted a little, now ~₹1,649).
Revenue ₹769 cr (FY26); ₹810 cr trailing-12-month	Full-year sales for FY26; the rolling last-twelve-months figure has already ticked up to ₹810 cr after a strong Q1 FY27.
Net profit ₹99–103 cr (FY26); ₹113 cr trailing-12-month	Final profit after all costs and tax — the rolling last-twelve-months figure is now ₹113 cr, i.e. profit is still climbing.
Operating margin ~19–20%	Out of every ₹100 of sales, about ₹19–20 is core operating profit — holding near the sharply higher level reached in FY26 (was ~11% two years ago).
Debt effectively nil; interest cost zero	Borrowings are negligible (were ₹319 cr a decade ago); the company funds growth from its own cash. Quarterly interest cost is ₹0.
ROCE 20.2%, ROE 15.5%, P/E ~19, dividend yield 0.61%	Return on capital is healthy (~20 paise of profit per rupee of capital); the share trades at ~19x yearly profit; it now pays a small dividend (the first in 13 years came in FY26).

2. Coverage (split view — continuity)

Period	Source	Read this quarter?
FY24 → Q4 FY26 (public results & announcements, ~3 years)	Web deep-dive	Carried forward from the Q4-2026 report (not re-read)
Boundary: Q4 & full-year FY26 (reported May 2026)	Web deep-dive	Prior report's coverage boundary
Q1 FY27 — quarter ended Jun 2026 (reported ~19 Jul 2026) ★	Web deep-dive	Newly deep-read in full ★

Only the new Q1 FY27 results were analysed in full this quarter; the multi-year backstory is carried forward from the Q4-2026 report. There are still no concall transcripts on Screener, so the "coverage" here is the public results record, not analyst calls.

Latest update highlights — Q1 FY27 (quarter ended Jun 2026, reported ~19 Jul 2026)

- **Double-digit sales growth.** Consolidated revenue ₹178.9 crore, **up ~30% on the year** (from ₹137.2 cr in Q1 FY26). Simply put, the business sold about a third more than in the same quarter last year.
- **Profit more than doubled.** Consolidated net profit ₹22.97 crore, **up ~139%** (standalone net profit ₹25.5 cr, up ~118%). Operating profit (EBITDA) ₹36.8 cr, up ~96%.
- **Margin held high — and this time with little one-off help.** Operating EBITDA margin ~19.1% versus just 7.66% a year earlier. This matters because Q1 is a seasonally weak quarter, so a ~19% margin here suggests the FY26 margin jump was real, not a one-quarter fluke.
- **Seasonal dip vs the record quarter — expected.** Sales fell ~31% from the record ₹259 cr of Q4 FY26. Q1 is always the softest quarter; notably the sequential drop (-31%) was **milder** than the -33% (Q1 FY26) and -40% (Q1 FY25) seen before — a sign the underlying base keeps rising.
- **Tone: confident.** Management/analyst commentary frames this as the turnaround continuing to compound (roughly 2.5x earnings over four quarters); the share has re-rated from ~₹450 to ~₹1,650–1,800 over the past year.

Business mix & capacity (quick facts)

- **Domestic vs export:** Exports remain **more than 70%** of revenue (80-plus countries incl. UK, Germany, Australia, Saudi Arabia); domestic India is under ~30%. Plainly: still mainly an export business that earns in foreign currencies and depends on overseas approvals.
- **Capacity:** Exact plant-utilization % is **not disclosed**. Management has previously said its specialised freeze-drying (lyophilisation) line serves only about half the demand it sees and is being expanded; a 132,000 sq ft global fulfilment centre supports supply to 100-plus countries. Read: room to grow output remains, and capex is going into it. No new utilization figure was given with Q1 FY27.

Since our last report ★

Builds on the **Q4-2026 report** (boundary: Q4/FY26 results, May 2026). Prior verdicts carried forward: **Durable earning trigger** → **YES** · **Management consistent** → **YES**. One quarter on, here is how that read has aged:

Prior read / promise-to-watch	What we said then	What Q1 FY27 shows	Movement
Trigger: richer mix + export approvals lifting margins	Real and proven in FY26, but flattered by ~₹23 cr one-offs; sustainable margin likely a notch lower	~19% EBITDA margin in a seasonally weak quarter with little one-off help — margin gain looks structural, not a fluke	Confirmed / Improving
Consistency: deleverage → exports → margins → dividend, all delivered	Story steady and compounding; delivered on all four legs	Another quarter of ~30% sales and ~139% profit growth; interest still zero; small dividend now flowing (yield 0.61%)	Confirmed
Watch: FY26 profit had ~₹23 cr one-off — is the "normal" margin lower?	Investors shouldn't annualise the peak quarter	Q1 stand-alone quarter posts ~19% margin without a comparable one-off — de-risks that concern	Improving
Watch: VRP-034 novel antibiotic (US FDA QIDP status)	Regulatory designation only; not approved or earning	No new clinical/out-licensing milestone this quarter — still pre-approval, still QIDP-designation stage	On-track (slow)
Watch: steady flow of new export approvals	27th GMP licence; Saudi Plerixafor; approvals keep landing	Export-approval momentum continues (recent ASEAN / new-market authorisations); exports still >70% of sales	Confirmed

Verdict change this quarter: Both verdicts are **unchanged (both stay YES)**. What genuinely moved is the *conviction* behind the trigger: Q1 FY27's ~19% margin, delivered in the weakest quarter and without a big one-off, is the strongest evidence yet that FY26's margin jump was structural rather than a one-time flatter. The one still-unproven leg — the VRP-034 pipeline — did not advance this quarter.

3. Earning trigger thesis

The headline driver (unchanged, now better-evidenced): Venus has shifted its sales mix toward higher-value products (oncology and specialty injectables) and keeps winning new export approvals, all on a now debt-free balance sheet. This turned a low-margin, indebted maker into a debt-free business earning far fatter margins. The key update this quarter: the fatter margin **persisted into a seasonally weak Q1 without one-off help** (~19% EBITDA margin vs 7.66% a year earlier), which is exactly the evidence needed to answer last quarter's "is the margin real?" question. On top of the proven turnaround sits optionality from the in-house antibiotic pipeline (VRP-034), which could be large if it clears trials and is licensed out, but earns nothing today and did not advance this quarter.

Trigger	What the record says	Evidence so far	Time horizon	Strength	Change since last report
Richer product mix (oncology + specialty injectables)	Deliberate shift to higher-margin drugs	EBITDA margin ~19% in Q1 FY27 (7.66% YoY) with little one-off; ~19–20% for FY26	Playing out now	Strong — now visible even in the weakest quarter	↑ improving — margin proven structural, one-off doubt fading
Export approvals into new markets	27th GMP licence; Saudi Plerixafor; ASEAN/new-market wins	Exports >70% of sales; authorisations keep landing	Ongoing	Moderate–Strong — steady but lumpy, approval-dependent	unchanged — momentum continues
Debt-free balance sheet funding growth	Borrowings cut from ₹319 cr to ~nil	Interest cost still ₹0; profit still self-funded	Done	Strong — fully delivered	unchanged — remains debt-free
Novel antibiotic VRP-034 (pipeline)	US FDA QIDP status; targets drug-resistant bloodstream infections	Regulatory designation only — no new milestone this quarter	Multi-year / uncertain	Unproven — genuine upside option, zero revenue today	unchanged — no progress this quarter

4. Management consistency scorecard

Period	What was said / set out	What actually happened	Verdict
FY21–FY25	Pay down heavy debt, fix the balance sheet	Borrowings cut from ₹319 cr to ~zero; interest eliminated (still ₹0 in Q1 FY27)	Delivered
FY24–FY26	Grow exports, add international GMP approvals	27th GMP approval; new markets (Saudi, CIS, ASEAN); exports >70% of sales	Delivered
FY24–Q1 FY27	Improve profitability via richer mix	Operating margin 11% → ~19–20%; margin held at ~19% in a weak Q1 without one-off help	Delivered (now cleaner)
FY26	Return cash once secure	First dividend in 13 years; dividend yield now 0.61%	Delivered
Multi-year	Build a novel-antibiotic research pipeline	VRP-034 at FDA QIDP designation; still pre-approval, no new step this quarter	Too-early

Narrative drift: None. The story stayed steady and coherent — deleverage, expand exports, move up the value chain, keep an R&D option on the side — and Q1 FY27 simply extends it: ~30% sales growth, ~139% profit growth, margins holding. The Q4-2026 report's main caveat (FY26 profit had ~₹23 cr of one-offs, so don't annualise the peak) is **partly resolved** this quarter — Q1's ~19% margin came without a comparable one-off. The remaining honesty caveats are unchanged and structural: there are still no concalls to pin quarter-by-quarter promises against, quarterly sales are seasonally lumpy (Q1 is always weakest), and the biggest blue-sky piece (VRP-034) still earns nothing.

5. Bottom line — two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged (conviction improving)

What moved it: Q1 FY27 delivered the single most useful piece of evidence since the last report — a ~19% operating margin in the seasonally weakest quarter, with no comparable one-off gain. That directly answers last quarter's open question of whether the FY26 margin jump was real, and points to yes. The concrete, still-live driver — a shift to higher-margin oncology/specialty injectables plus a steady flow of export approvals, all on a debt-free balance sheet — is visibly compounding (~30% sales and ~139% profit growth this quarter). It stays a YES rather than a slam-dunk only because sales remain lumpy quarter-to-quarter and the biggest upside option, VRP-034, still earns nothing and did not advance.

Management consistent? → YES · vs last quarter: unchanged

What moved it: nothing that weakens the read, and one thing that strengthens it. Across several years management set out to clear debt, widen exports, lift margins and pay a dividend — and delivered on all four; Q1 FY27 extends the same story with no drift and, importantly, a cleaner (one-off-free) margin. The single qualifier is structural, not managerial: with no concalls on record, this consistency read rests on the public results and announcements rather than on tracking management's own quarterly guidance.
