Kennametal India Ltd: Concall Tracker

Update for the Apr-Jun 2026 quarter (Q4 of its July-June FY26) · Report date: 6 Nov 2026 · KENNAMET · BSE 505890

Not investment advice. Do your own due diligence. Kennametal India holds no earnings calls; this update is a web deep-dive using sources published up to 30 Sep 2026.

1. Snapshot

What it does: makes tungsten-carbide cutting tools and inserts (Kennametal and Widia brands), wear parts for mining and energy, and a smaller line of machine tools. When an Indian factory drills, turns or mills metal, Kennametal sells the tool tip that does the cutting. About three-quarters owned by US parent Kennametal Inc. **Its year runs July to June**, so the Apr-Jun 2026 quarter is its fourth quarter and closes FY26.

MARKET CAP

≈₹7,884 cr

Up from about ₹6,181 cr at our last report; price about ₹3,586.

APR-JUN 2026 SALES

₹478 cr

Up about 48% on a year ago, a record quarter by a wide margin.

APR-JUN 2026 NET PROFIT

₹89 cr

Nearly three times last year's ₹31 cr.

OPERATING MARGIN

27%

Versus 15% a year ago and 19% last quarter: the best in its history.

FY26 FULL YEAR

₹1,511 cr / ₹196 cr

Sales up about 29%, profit nearly doubled from ₹103 cr. Profit finally broke out of its four-year flat line.

P/E · DEBT

≈42× · nil

Still pricey, though cheaper than before on the higher profit. No borrowings.

2. Coverage: no earnings call, web deep-dive

No new concall transcripts were available on Screener; this update is based on a global web deep-dive. Screener lists seven one-on-one investor-meeting transcripts from May 2022 to March 2024, all read by the prior report. Nothing newer exists, so this quarter rests on the results filing and press release.

Period	Source	Read?
May 2022 to Mar 2024 (7 investor meetings)	Screener transcripts	Carried forward from the Q4-2026 report
	Results, press release	Prior report boundary

Jan-Mar 2026 quarter (results 7 May 2026)		
Apr-Jun 2026 quarter and FY26 (results 14 Aug 2026)	Screener results; company press release via Outlook Business and The Machinemaker; Kennametal Inc. FY26 commentary on tungsten	Newly read in full ★

★ Latest update highlights: Apr-Jun 2026 quarter and FY26 (results 14 Aug 2026)

- **Sales ₹478 cr, up about 48%; profit ₹89 cr, nearly triple.** Read: the strong Jan-Mar quarter wasn't a one-off. It got even better.
- **Margin jumped to 27%.** Read: more of each rupee of sales now reaches profit, the thing that was missing for four years.
- **Hard Metal (cutting tools) led on volume**, with demand spread across many end-user industries, per the MD Vijaykrishnan Venkatesan.
- **Tungsten is the wild card.** Management called it an "unprecedented tungsten environment". The US parent has been raising prices to pass on soaring tungsten costs. Read: part of the jump is likely higher selling prices, not just more units; the India release doesn't split price from volume.
- **Tone:** upbeat on Indian manufacturing, no numeric guidance (as always).

Business mix & capacity
Domestic vs export: last stated around 82% India / 18% exports (Mar 2024 meeting); no update since. Capacity: no new utilisation figure disclosed. The insert plant built in 2022 was said to hold about double its output then, and growth is "plug in more machines". Read: room to grow without a big new plant, though how much headroom is left after this jump isn't public.

★ Since our last report (builds on the Q4-2026 report, latest data: Jan-Mar 2026 quarter, results 7 May 2026)
Prior verdicts: **Trigger MAYBE · Consistency YES**

Prior read	What we said then	What the new quarter shows	Movement
Trigger	Real India-capex driver, but profit flat for four years; the strong Mar quarter must repeat	It repeated and got bigger; FY26 profit nearly doubled	Improving
Consistency	Same story since 2022, delivered; thin disclosure	Same story, delivered again; still no calls	Confirmed
Exports / China drag	Weak for 2+ years	Not addressed in the release	Unclear
New machines (VTL/HTL)	Launched, not in numbers	No mention	Unclear

Verdict change: trigger **upgraded to YES**: the "needs to repeat" test is met, and profit has broken its flat line. Consistency unchanged at YES.

3. Earning trigger thesis

The driver hasn't changed: India's factories are investing and running harder, and they use up more cutting tools. For years that grew sales but not profit. In the last two quarters it finally showed up in profit, with margins jumping to records. The open question is how much of this jump is tungsten-led price increases that could reverse if tungsten cools off, versus lasting volume and mix gains.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report

India manufacturing / capex demand	Broad-based demand, momentum to continue	Sales up about 48% in the quarter, 29% for the year	Live, cyclical	STRONG	↑ improving: now in profit too
Pricing in a tungsten spike	"Unprecedented tungsten environment"	Record margin; parent raised prices globally	Near term	MODERATE may fade with tungsten	New this quarter
Diversify away from auto	Grow defence, aerospace, rail, energy	Demand "across end-use segments"	Ongoing	STRONG	Unchanged
Royalty cut to parent	Fee cut from Apr 2024	Still helping margin	In effect	STRONG	Unchanged
Machines / exports	New VTL/HTL machines; China to recover	No update	Uncertain	UNPROVEN	Unchanged

4. Management consistency scorecard

Period	What was said / promised	What actually happened	Verdict
2022	Move beyond auto into new end-markets	Auto fell from about 65% to under half of sales	Delivered
2022	New insert plant for future growth	Built late 2022; now absorbing a big volume jump	Delivered
2022-23	China machine exports to recover soon	Stayed weak; no update this quarter	Partly
2024	Royalty cut, light capex, cash back to shareholders	Done; ₹40 interim dividend in May 2026	Delivered
FY26	India demand would drive growth	Record quarter and year; profit nearly doubled	Delivered

Narrative drift: none. Same MD, same "we sell productivity" message, and this year the numbers backed it up. The knock is still disclosure: no calls since March 2024 and no breakdown of how much of the jump came from price.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: upgraded

Last time we said the strong March quarter had to repeat. It did, and harder: sales up about 48%, margin at a record 27%, full-year profit nearly doubled. The India factory story is now in profit, not just sales. Watch the tungsten piece. Some of this is likely price, and margins could cool if tungsten does.

Management consistent? → YES vs last quarter: unchanged

Same team, same story, and it delivered. The only gap is transparency: no investor meetings in over two years and no split of price versus volume.
