Prince Pipes & Fittings Ltd

Concall tracker · Q2 2027 · 11 Nov 2026

1. Snapshot

A Mumbai maker of plastic pipes, fittings and water tanks for home plumbing, farms, drainage and buildings, sold through dealers, retailers and plumbers across India under the Prince and Trubore brands. It also runs a young, loss-making bathware line (Aquel). Its main raw material is PVC resin, whose price swings drive profits.

Number	Value	What it means
Market cap	Rs 3,499 cr	A mid-sized company valued at about 25 times its last 12 months' profit.
Q2 FY27 revenue	Rs 821 cr	Up about two-fifths on a weak quarter a year ago.
Q2 FY27 volume	52,080 tonnes	Up about a fifth; first half volume only up about 7%.
Q2 FY27 operating margin	12%	Up from 9% a year ago and a near-zero quarter in Dec 2024. Back to its normal band.
Q2 FY27 net profit	Rs 48 cr	More than three times a year ago.
FY26 net profit	Rs 75 cr	Still well below the Rs 182 cr of FY24, so this is a recovery, not a new peak yet.
Receivable days	34 days	Customers now pay much faster, freeing up cash.
ROCE	about 6%	Weak for now, because profits collapsed in FY25 and plants were added ahead of demand.

2. Concall coverage

Nine calls read across about three years; the latest two in full.

Quarter	Date	Transcript read?
Q2 FY24 to Q3 FY26	Nov 2023 to Feb 2026	Yes, skimmed for promises
Q4 FY26	May 2026	Yes, skimmed
Q1 FY27	Aug 2026	Yes, read in full
Q2 FY27	4 Nov 2026	Yes, read in full

Latest concall highlights — Q2 FY27 (4 Nov 2026)

- Sales up about two-fifths, volume up about a fifth, margin 12%. Part of it is dealers restocking after PVC prices firmed up; management says the rest is real demand plus market share from struggling smaller makers.
- The government's minimum import price on PVC resin has put a floor under prices, so dealers are willing to hold stock again. A countervailing duty on Chinese PVC has been recommended and could follow in about 45-60 days.
- Guidance kept: margin 11-13% for the year. Volume guidance softened from 12-15% to 'double digit' for the full year, which still needs a strong second half.
- Higher-value CPVC and PPR plumbing pipes are now more than 30% of sales, up from about 25%. DECILO low-noise pipes are being installed; production moves to Silvassa by March.
- New Chief Business Officer, Rajat Mishra; President and CMO Ashok Mehra retires on 16 Nov 2026.

Business mix & capacity

- Domestic vs export: almost entirely domestic. No export split given.

- Capacity: about 435,000 tonnes a year installed across eight plants. Annualised Q2 volume is roughly half of that, so there's lots of room before new capacity is needed. The new Bihar (Begusarai) plant is running at 'very strong' utilization.

3. Earning trigger thesis

This is a recovery story. PVC prices crashed and swung wildly through FY25 and FY26, dealers stopped stocking, and profits collapsed. Now prices have steadied, the government has set a floor on imported PVC, and Prince's margins are back in their normal band with a bigger share of higher-value CPVC and PPR pipes. Spare capacity from the Bihar plant means growth can come without much new spending. The catch: a lot of the trigger is a government price floor and a raw-material price it doesn't control.

Trigger	What management said	Evidence so far	Time horizon	Strength
PVC price stability (minimum import price, likely duty)	Floor on prices brings dealers back (Nov 2026)	Q2 volume up about a fifth, restocking	Now	Moderate: helps, but it's government policy
Higher-value pipes (CPVC, PPR, PP)	Share above 30% and rising (Nov 2026)	Margin back to 12%	Ongoing	Strong
Bihar plant and spare capacity	Strong utilization in Begusarai (Nov 2026)	East-India sales growing	FY27-FY28	Moderate
Bathware (Aquel)	Breakeven 'in a couple of quarters' (Aug 2026)	Still losing money; sales below target	FY28	Weak

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	No debt plan; interest is small.
New business	Yes	DECILO polypropylene low-noise pipes installed in projects; new R&D function for new pipe categories (Nov 2026).
Margin up	Yes	Margin 12%, up about three points; 'mainly driven by improvement in product mix' (Nov 2026).
New management	Yes	Rajat Mishra appointed Chief Business Officer from 3 Nov 2026; CMO Ashok Mehra retires.
New capacity	No	No new plant this quarter; focus is on 'sweating out existing assets'.
Big orders	No	Retail business; no order book.
Turnaround	Yes	Profit more than tripled after a loss in Dec 2025; restocking after PVC prices stabilised (Nov 2026).
Promoter buying	No	Nothing said.

Single concrete driver: Steadier PVC prices under the government's import floor bringing dealers back, plus a rising share of higher-margin CPVC and PPR plumbing pipes.

3c. Margin bridge

Q2 margin was 12% against 9% a year ago. Steadier PVC prices stopped inventory losses, and more CPVC and PPR in the mix lifted it. Management calls 11-13% the normal band for the year, including bathware losses (lasting).

3d. Management changes

Rajat Mishra joins as Chief Business Officer from 3 Nov 2026. He brings about two decades of sales and commercial leadership across building materials, adhesives, FMCG and telecom. President and Chief Marketing Officer Ashok Mehra retires on 16 Nov 2026.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Nov 2024	Bihar plant over 50,000 tonnes by March 2025	Plant started in early FY26, phased	Partly
May 2025	Double-digit volume growth in FY26	FY26 sales up only about 3%; cut to high single to low double digit mid-year	Missed
Aug 2025	Margin back up once anti-dumping duty comes	The duty never came; recovery came later from the price floor	Partly
May 2026	FY27: margin 11-13%, volume 12-15%	First half margin about 12%; volume up about 7%, guide softened to double digit	Partly
Aug 2026	Bathware nearing breakeven	Still losing money in Q2	Missed

The long-term story (brand, distribution, higher-value pipes) has stayed the same. Short-term volume guidance has been missed or trimmed for two years, mostly because PVC prices and the promised anti-dumping duty didn't behave as hoped. Management now has the margin band back, but growth guidance still leans on a strong second half.

5. Bottom line

Durable earning trigger? → YES

Margins are back in their band and volume finally grew, helped by a PVC price floor and a better product mix. It's a real recovery, but it depends partly on government action on PVC imports, so it isn't fully in management's hands.

Management consistent? → MAYBE

Volume guidance was missed in FY26 and trimmed again in FY27. Bathware breakeven keeps slipping. They did deliver on margins and on receivables, which are much better.

6. Checkpoints for next quarter

- Dec quarter volume grows by double digits
- Operating margin stays inside the 11-13% band
- Bathware losses shrink quarter on quarter
