Aditya Infotech Ltd CONCALL TRACKER

The CP PLUS company. It makes and sells CCTV cameras and recorders in India, mostly to shops and small businesses, plus big companies, government and homes. It runs India's largest CCTV factory at Kadapa, Andhra Pradesh.

Screener ticker: CPPLUS · Quarter folder: Q1-2027 · Builds on the Q4-2026 report · New call deep-read: Q1 FY27 (13 Aug 2026) · Figures from the call and Screener.in.

1. Snapshot

Number	Value	Plain-English read
Q1 FY27 sales (Apr-Jun 2026)	₹1,402 cr	Up about 90% on the same quarter last year. Sales nearly doubled, and that's in a quarter that's usually quieter than Q4.
Gross margin	30.8%	What's left from each sales rupee after paying for the product: about 31 paise, up 8 points on last year, because more of what it sells is its own CP PLUS brand.
EBITDA / margin	₹208 cr / 14.8%	EBITDA = profit from the core business before interest, tax and depreciation. The margin is up about 6 points on last year but down from Q4's one-off 18%, now that the cheap old stock is used up.
Adjusted net profit	₹142 cr	Take-home profit, more than four times last year's Q1. Helped by interest costs falling by more than half after debt was repaid.
Debt to equity	0.07	Borrowings are tiny next to shareholders' money. Basically debt-light.
Cash conversion cycle	64 days	How long cash is stuck in stock and unpaid bills before it comes back. It improved this quarter, which matters because cash had lagged profit before.
Market value / P/E	₹50,640 cr / ~86	Investors pay about ₹86 for each ₹1 of yearly profit. Still very expensive, though less extreme than last quarter's ~127 because profits caught up.

2. Concall coverage

Period	Date	Transcript read?
Q1 FY26 → Q3 FY26 (3 calls)	Aug 2025 → Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	28 May 2026	Covered by the Q4-2026 report
Q1 FY27	**13 Aug 2026**	**Newly deep-read in full ★**

The company only listed in August 2025, so the whole record is five calls over about a year. Only the newest one was read in full this time. Calls after 30 Sep 2026 are out of scope.

★ Latest concall highlights: Q1 FY27 (13 Aug 2026)

- **Sales nearly doubled.** ₹1,402 cr, up about 90%. CP PLUS is now 87% of sales and internet-connected (IP) cameras are 79% of CP PLUS. Plain read: it's selling more of its own, pricier gear.
- **Margin settled back to guidance.** EBITDA margin 14.8%, right inside the 14-15% FY27 guide. Management kept the full-year guide as is and said it'll say more after the half-year.
- **Chip costs still climbing.** Memory and processor chip prices are up sharply across the industry. CP PLUS has raised prices 10-20% so far, expects 15-20% by September and roughly 25% for the year, passed on in steps so buyers don't get a shock. No sign of demand dropping yet.
- **More capacity and in-house parts.** Kadapa makes about 2.5 million units a month at 85-90% use; new lines added in August, plan is to roughly double in three years with more land at Kadapa and a second site in Greater Noida. A housing plant starts in Q3 and a cable joint venture with Orient Cables by year-end.
- **Tone:** confident, sometimes a bit salesy. Management admitted more than 40 brands now hold the security certificate, so competition is back.

Business mix & capacity: quick facts

- **India vs exports:** practically all India. Exports are still a plan, now pencilled in for real numbers in 18-24 months using the new high-end Pro range. Plain read: it's a pure India story for now.
- **Capacity use:** 85-90% of about 2.5 million units a month. Plain read: the factory's close to full, which is why the expansion matters.

★ Since our last report

Builds on the Q4-2026 report (boundary: Q4 FY26 call, 28 May 2026). Prior verdicts: **Trigger YES** · **Consistency YES (short record)**.

Prior read	What we said then	What the new call shows	Movement
Earning trigger	China-brand ban handed CP PLUS the market	Sales up ~90%, own-brand share up again	Confirmed
Consistency	Met or beat guidance every quarter	Q1 margin landed in the guided band; guide held, not raised this time	On-track
Chip-cost squeeze (Q4 warning)	Cheap stock used up; costs rising into 2027	Margin did drop from Q4 as warned; price hikes so far keeping it in the band	On-track
Market share (~45% claimed at Q4)	Big jump from ~30%	FY26 share cited as 43.3% (Frost & Sullivan); 40+ certified rivals now	Slipping (slightly)
Cash generation	Weak despite booming profit	Cash cycle improved to 64 days	Improving
Exports	"A few quarters down the line"	Now 18-24 months away	Slipping

Verdict change this quarter: both unchanged. The numbers did what management said they would, including the margin dip it warned about. The softer spots are the export date drifting out and competition coming back as more brands get certified.

3. Earning-trigger thesis

What management says will grow profits

The driver hasn't changed. Since April 2025 every network CCTV camera sold in India needs a government cyber-security certificate that Chinese chips and brands can't get, and from April 2026 even old stock can't be sold. CP PLUS, the biggest Indian maker, has scooped up the share. On top of that it's selling more of its own brand and more IP cameras, and starting to make housings, cables and lenses itself. The next chapter is a high-end Pro range for big companies and government, smart-home products and, later, exports. The worry is that the easy share gains are behind it now that 40-plus certified brands are competing, while chip costs keep rising.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
China ban / security certificate	An industry reset; CP PLUS keeps gaining share	Sales up ~90% in Q1 FY27	Now	**Strong**	unchanged; more rivals certified
Own brand + IP mix	Richer mix lifts margins	CP PLUS 87% of sales; gross margin up 8 points	Now → FY28	**Strong**	↑ improving
Making parts in-house	Housings (Q3), cable JV (year-end), lenses on trial; adds a little margin	Plants being built; no gain yet	FY27 → FY28	**Moderate**	↑ dates now firmer
New categories (Pro range, smart home, drones/robots)	Pro and smart home live by end-Q3 / Q4; drones and robots exploratory	Nothing on sale yet	FY27 → FY29	**Unproven**	new
Exports	Real numbers in 18-24 months	None today	FY29	**Unproven**	↓ pushed out

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q1 FY26 (Aug 2025)	FY26 sales ₹3,900-4,100 cr, 10-11% margin, repay debt	₹4,221 cr, 13.7% margin, debt cut hard	Delivered / Beat
Q2 FY26 (Nov 2025)	25-30% growth, 2 million units a month, new brands	All done	Delivered
Q3 FY26 (Feb 2026)	FY26 margin 11-12%; January price hike	Beat on margin; hike taken	Delivered / Beat
Q4 FY26 (May 2026)	FY27 sales ₹6,000-6,500 cr at 14-15% margin; warned Q4's 18% was a one-off	Q1 margin 14.8%, sales run-rate on track	Delivered (so far)
Q1 FY27 (Aug 2026)	Guide held; housing plant Q3; cable JV by year-end; Pro range by Q3/Q4; ~25% price hikes for the year	To be judged	Too-early

Narrative drift: very little. Five calls, one story, and every number promised so far has turned up. Two small things: exports keep sliding further out, and the list of new categories (robots, drones, door locks) is getting long for a company whose job right now is keeping up with CCTV demand. That reads more like ambition than drift, but it's worth watching that it doesn't distract.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: unchanged

Nothing moved it. The ban on Chinese gear is still doing the work and the brand mix keeps getting richer. The question is how long the share gains last now that over 40 brands are certified, and whether price hikes keep up with chip costs. The stock at ~86 times earnings already assumes they will.

Management consistent? → YES vs last quarter: unchanged (still a short record)

The Q1 margin landed exactly where management said it would after warning that Q4 was flattered. Guidance was held, the cash cycle improved and the capacity plans got more concrete. It's still only five calls, all during a very friendly rule change, so it's early evidence rather than a long track record.
