# Acutaas Chemicals Ltd

CONCALL TRACKER

Makes advanced pharmaceutical intermediates (the complex chemical building blocks that go into finished medicines), runs contract manufacturing for global drug innovators, and is adding battery and semiconductor chemicals. Formerly Ami Organics Ltd.

NSE: ACUTAAS · BSE: 543349 · Quarter folder: Q2-2027 · Builds on the Q1-2027 report · New call deep-read: Q2 FY27 (27 Oct 2026) · Figures: Screener.in (consolidated) and the call itself.

## 1. Snapshot

Most of the money comes from pharma intermediates, including CDMO work. CDMO = Contract Development and Manufacturing: the company develops and makes a molecule only for one drug innovator under a long, sticky contract. The rest is specialty chemicals, which now includes battery-electrolyte additives and chip-making chemicals.

| Number | Value | Plain-English read |
|---|---|---|
| Q2 FY27 sales (Jul-Sep 2026) | ₹437 cr | Total sales for the quarter, up about 43% on the same quarter last year. A new quarterly high. |
| Q2 FY27 EBITDA / margin | ₹176 cr / 40.3% | EBITDA = operating profit before interest, tax and depreciation. Up about 85% on last year; 40 paise of each sales rupee is now core profit, up from about 31 paise a year ago. |
| Q2 FY27 net profit | ₹123 cr | Take-home profit after all costs and tax, up about 71%. |
| H1 FY27 sales / net profit | ₹767 cr / ₹198 cr | First six months of the year: sales up about 49%, profit up about 71%. Already well past the full-year growth guidance pace. |
| Market value / P/E (Screener snapshot) | ₹31,035 cr / 67 | Investors pay about ₹67 for each ₹1 of yearly profit. Very expensive: years of fast growth are already in the price. |
| Net cash (30 Sep 2026) | ~₹301 cr | Cash in hand above any borrowing. Still effectively debt-free, though a touch lower than in June. |
| Working capital | 115 days (vs 99 in Q1) | Money tied up in stock and unpaid customer bills. Up for a second quarter running, this time because customers are paying more slowly. Worth watching. |

## 2. Concall coverage

| Period | Date | Transcript read? |
|---|---|---|
| Q3 FY22 → Q4 FY26 (20 calls) | Oct 2021 → May 2026 | Carried forward from the Q4-2026 and Q1-2027 reports |
| Q1 FY27 (prior boundary) | 24 Jul 2026 | Covered by the Q1-2027 report |
| Q2 FY27 | 27 Oct 2026 | Newly deep-read in full ★ |

Only the Q2 FY27 call was read in full this quarter; the five-year backstory comes from the earlier reports.

## ★ Latest concall highlights: Q2 FY27 (27 Oct 2026)

- **Guidance raised on both lines.** FY27 sales growth guide lifted from about 25% to about 30%, and the EBITDA margin guide from "similar to FY26" (~36%) to 38-40%. Plain read: management now expects a better year than it promised three months ago.
- **CDMO target pulled forward a year.** The ₹1,000 cr CDMO sales goal, first set for FY28, is now expected in FY27 itself, backed by orders in hand. A new goal of ₹2,000 cr by FY30 was set, with margins in the same range, and spread across more molecules and customers.
- **Pharma carried the quarter again.** Pharma-intermediates sales ₹402 cr, up about 53%; the non-CDMO core business grew over 25%. Specialty chemicals fell about 20% to ₹35 cr, as old commodity lines are phased out and one US chip-chemical customer paused orders after being bought out (now resumed).
- **New businesses on track.** First full quarter of battery-chemical sales; the third battery product shipped early and a fourth is in customer trials. The South Korea chip-chemicals plant opened ahead of schedule, with revenue still pointed to FY28.
- **New capex.** About ₹100 cr for a bulk electronic-grade chemicals plant, starting around H1 FY29. Total FY27 capex about ₹300 cr, plus land for the next CDMO plant. Tone: confident, at times close to celebratory.

## Business mix & capacity: quick facts

- **Segment mix (Q2 FY27):** pharma intermediates ~92% / specialty chemicals ~8% of sales. Plain read: the company leans on pharma even more than last year, because the old chemicals are shrinking faster than battery sales grow. Domestic vs export split was not broken out on this call.
- **Capacity use:** Ankleshwar (Unit 2, the CDMO plant, ₹330 cr invested) ran at 30%, expected to reach about 40% by March 2027 and fill up by FY28. Plain read: plenty of room to grow CDMO without new plants for now. Battery plant use is still low; Sachin was not updated this time (83% in Q1).

## ★ Since our last report

Builds on the Q1-2027 report (boundary: Q1 FY27 call, 24 Jul 2026). Prior verdicts: **Trigger YES · Consistency YES**.

| Prior read | What we said then | What the new call shows | Movement |
|---|---|---|---|
| Earning trigger | CDMO + product mix is a real, structural driver | CDMO target brought forward a year; new ₹2,000 cr FY30 goal; margin at a record 40% | Confirmed |
| Consistency | Guides ~25% and beats it | Beat again, and this time raised the guide for both growth and margin | Improving |
| FY27 margin "hold steady" | Guide had shifted from "expand" to "hold" | Back to expansion: 38-40% for FY27 | Improving |
| Third battery product | Plant to finish by end of Q2 FY27 | Commercial shipments already started, ahead of time; fourth product in trials | Confirmed |
| Korea chip chemicals | Revenue slipped to FY28 | Plant opened ahead of schedule; FY28 still the ramp year, slow start flagged again | On-track |
| Validated CDMO products | 4 products, revenue from H2 FY27 | Orders received; 8-9 products to enter revenue in 1-1.5 years | On-track |
| Reliance on one cancer drug | Hard to measure, no split given | Still no CDMO split; management says the next ₹1,000 cr will be broader | Unchanged |

**Verdict change this quarter:** both verdicts unchanged at YES, with consistency a little stronger. Raising guidance halfway through the year while pulling a target forward is about as good as delivery gets. The one new soft spot is slower customer payments.

## 3. Earning-trigger thesis

### What management says will grow profits

The engine is still the move from cheap commodity chemicals to high-value pharma intermediates and long CDMO contracts, anchored on one big prostate-cancer drug ingredient. This quarter it hit a record 40% margin and management pulled its CDMO goal forward a year, then set a fresh one for FY30. Battery chemicals are now selling, chip chemicals start in FY28 and an electronic-chemicals plant follows in FY29. The catch: the new businesses earn less than CDMO, and the company still won't say how much one molecule matters.

| Trigger | What management said | Evidence so far | Time horizon | Strength | Change since last report |
|---|---|---|---|---|---|
| CDMO ramp (anchor oncology molecule + pipeline) | ₹1,000 cr CDMO in FY27 (was FY28); ₹2,000 cr by FY30 at similar margins | Pharma intermediates +53% in Q2; orders in hand for H2 | Now → FY30 | Strong: in the numbers and backed by contracts | ↑ improving: target pulled forward, new goal set |
| Margin upgrade (product mix + plant use) | FY27 EBITDA margin 38-40% | Q2 at 40.3%, up about 9 points on last year | Playing out | Strong | ↑ improving: guide moved from "hold" to "expand" |
| Battery chemicals (VC, FEC, third and fourth products) | Ramp over next 2-3 quarters; orders in hand | Three products selling; amounts not disclosed | FY27 → FY29 | Moderate: started, size unknown | ↑ improving: third product early |
| Semiconductor chemicals (BFC + Korea plant) | FY28 a ramp-up year; slow start | Korea plant opened early; samples with customers; BFC orders resumed | FY28 → FY30 | Unproven | unchanged |
| Electronic-grade chemicals (new) | About ₹100 cr capex; production by H1 FY29; at least 3x asset turn | Just announced | FY29+ | Unproven | new this quarter |

## 4. Management consistency scorecard

| Period | What was promised | What actually happened | Verdict |
|---|---|---|---|
| FY24 call | ~25% growth in FY25; CDMO ramp from H2 FY25 | FY25 grew ~40%; CDMO drove it | Delivered / Beat |
| Q3 FY25 call (Jan 2025) | ₹1,000 cr CDMO sales by FY28 | Now expected in FY27, a year early | Delivered early (pending) |
| FY25 call | ~25% growth in FY26; better margins; battery plant in H2 FY26 | FY26 grew ~33%, margin 36%, battery plant opened Jan 2026 | Delivered / Beat |
| Q4 FY26 call | ~25% growth in FY27; battery supply from ~Q1 FY27; chip chemicals from FY27 | H1 grew 49%; battery supply on time; chip revenue moved to FY28 | Delivered / Partly |
| Q1 FY27 call | Stable margin; third battery product by Q2 FY27; Korea plant by end of Q2 | Margin rose to 40%; third product shipped early; Korea plant opened early | Delivered / Beat |
| Q2 FY27 call | ~30% growth and 38-40% margin in FY27; ₹1,000 cr CDMO in FY27; ₹2,000 cr by FY30 | To be judged | Too-early |

**Narrative drift:** very little. The same story (move up the value chain in pharma, then add battery and chip chemicals) has run for three years, and most promises have landed on time or early. The pattern is guide low, then beat and raise. Two things stop it from being spotless: chip-chemical revenue slipped a year back in Q1 and hasn't moved since, and management still refuses to split CDMO from the rest, so the reliance on one molecule can't be checked. The tone this quarter was more upbeat than before, which is earned, but it raises the bar for H2.

## 5. Bottom line: two verdicts

**Durable earning trigger? → YES** vs last quarter: unchanged

Nothing moved this down and two things moved it up: the CDMO target came a year early and margin guidance went up. The driver is concrete, under contract and plainly visible in the numbers. Battery chemicals add a second leg, chip and electronic chemicals a later third. The real risks are the unknown weight of one anchor molecule and a share price (P/E ~67) that already prices in years of this.

**Management consistent? → YES** vs last quarter: unchanged (stronger)

Raising guidance mid-year, delivering the third battery product and the Korea plant early, and hitting a CDMO goal a year ahead is a clean record. The only marks against are the one-year slip in chip-chemical revenue set earlier and a stubborn refusal to show the CDMO split. Watch working capital: it has crept up two quarters in a row.
