Uno Minda Ltd

Concall tracker · Q2 2027 · 11 Nov 2026

1. Snapshot

One of India's biggest auto-parts groups. It makes switches, lights, alloy wheels, seats, horns, sensors, EV chargers and controllers, airbags (through joint ventures) and soon sunroofs, mostly for two-wheeler and car makers in India, with about a tenth of sales overseas. It earns by selling more parts, and costlier parts, into each new vehicle.

Number	Value	What it means
Market cap	Rs 79,543 cr	A large company; the market values it at nearly 80 times its yearly profit, so a lot of growth is already expected.
Q2 FY27 revenue (group)	Rs 6,655 cr	A record quarter, up about two-fifths on a year ago.
Q2 FY27 operating profit (EBITDA)	Rs 733 cr	Profit before interest, tax and depreciation, up about a third.
Q2 FY27 net profit (Uno Minda share)	Rs 420 cr	Up about two-fifths, a record.
EBITDA margin	11.0% (Q2), 10.7% (half year)	Keeps about eleven rupees in a hundred of sales before interest and depreciation. A touch lower than last year.
Cash after capex	negative for several years	It spends more on new plants than it earns in cash, so growth is being built ahead of profit.
ROCE	19%	Decent return on the money tied up in the business.

2. Concall coverage

Seven calls read (Feb 2025 to Aug 2026), the latest two in full. The Q2 FY27 call was held on 5 Nov 2026 but its transcript wasn't filed on Screener, NSE or the company site by 11 Nov. The newest quarter is read from the Q2 press release and investor presentation filed with NSE on 5 Nov.

Quarter	Date	Transcript read?
Q3 FY25 to Q2 FY26	Feb 2025 to Nov 2025	Yes, skimmed for promises (4 calls)
Q3 FY26	Feb 2026	Yes, skimmed
Q4 FY26	May 2026	Yes, read in full
Q1 FY27	4 Aug 2026	Yes, read in full
Q2 FY27	5 Nov 2026	Transcript not yet filed; press release and presentation read

Latest concall highlights — Q2 FY27 results (5 Nov 2026, press release and presentation)

- Record quarter: group sales Rs 6,655 cr, up about two-fifths; net profit Rs 420 cr, also up about two-fifths. Switches, lights, alloy wheels, seats and the EV and gas-kit businesses all grew.
- Margin 11.0%, a bit lower than a year ago but back inside the yearly guide of 11% give or take half a point, after a weak 10.3% in Q1 that it blamed on metal and gas costs and minimum-wage hikes.
- Board approved another Rs 85 cr for more sunroof capacity at Bawal to meet new orders; the first sunroof plant should start by end of FY27, the expansion by Q2 FY28.
- Leadership: Nitesh Minda named CEO-designate of the switching domain as A.G. Giridharan retires; a new chief marketing officer was appointed.
- Still stuck (from the Aug call): the EV-motor joint venture with China's Inovance has Indian approval but needs China's, and China has tightened its rules.

Business mix & capacity

- Domestic vs export: about 90% domestic / about 10% international (Q1 FY27), with exports from India of about Rs 228 cr a quarter. Nearly all of it rides on Indian vehicle demand.
- Capacity: many new plants ramping (Kharkhoda car alloy wheels, Supa two-wheeler wheels, Indonesia lights, an airbag plant). Management says new plants usually reach target profit by their third full year of production; no group-wide utilization figure given.

3. Earning trigger thesis

The driver is more content per vehicle. As Indian cars and scooters get premium features (LED and pixel lights, alloy wheels, sunroofs, airbags) and go electric, Uno Minda sells more and costlier parts into each one, and it keeps adding plants and product lines to catch that. It has beaten industry growth quarter after quarter, and the Q2 record shows it's still working. The risk is what you pay for it: margins aren't rising, capex keeps cash flow negative, and the EV-motor joint venture with Inovance is held up in China.

Trigger	What management said	Evidence so far	Time horizon	Strength
More content per vehicle	Will keep beating industry growth (every call)	Sales up about two-fifths in Q2, growth well ahead of vehicle output	Ongoing	Strong: delivered quarter after quarter
New plants ramping	Kharkhoda alloy wheels, two-wheeler lighting, airbags, Indonesia (Aug 2026)	Several commissioned on time; ramping now	FY27-FY28	Strong
Sunroofs	Plant by end FY27; order book over Rs 500 cr (Aug 2026)	Extra Rs 85 cr capex approved in Q2 for new orders	FY28-FY30	Moderate: orders in, no sales yet
EV powertrain (Inovance JV)	Phase 1 by Q2 FY27 (Nov 2025)	Needs China approval; Inovance reviewing new rules	Unclear	Weak: slipping

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Finance costs flat; capex funded mostly from internal cash, no deleveraging plan stated.
New business	Yes	Sunroofs, EV powertrain parts, interior ambient lighting 'an entirely new avenue of growth' (Aug 2026).
Margin up	No	Margin guidance held at 11% give or take half a point; Q1 margin was hit by input costs (Aug 2026).
New management	Yes	Nitesh Minda appointed CEO-designate, switching domain, as A.G. Giridharan retires (5 Nov 2026 filing).
New capacity	Yes	Kharkhoda 60,000-a-month alloy wheel line fully ramped from Q2 FY27; another 30,000 in H2 FY27; sunroof plant by end FY27 (Aug 2026).
Big orders	Yes	Sunroof order book over Rs 500 cr; two-wheeler lighting order of about Rs 450 cr peak a year; seating export order about Rs 390 cr (Aug 2026).
Turnaround	No	Not applicable.
Promoter buying	No	Nothing said.

Single concrete driver: More parts per vehicle as Indian cars and two-wheelers add premium features and go electric, with new alloy-wheel, lighting and sunroof plants ramping up.

3c. Margin bridge

Q2 margin was 11.0% against 11.5% a year ago, and the first half 10.7% against 11.1%. Metal and gas costs are passed on to car makers but without a markup, which mathematically dilutes the margin, and state minimum-wage hikes added cost. New plants that haven't reached full output also weigh. Management keeps its 11% give or take half a point guide (lasting).

3d. Management changes

Nitesh Minda, with Uno Minda since 2008 and currently President and Chief Marketing Officer, becomes CEO-designate of the switching domain (the group's largest vertical) as A.G. Giridharan retires. Kartikeya Joshi takes over as Chief Marketing Officer. A planned succession inside the family-run group, not a change of direction.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Feb 2025	Margin 11% give or take half a point, including startup costs	FY26 and H1 FY27 inside the band, though at the lower half	Delivered
Every call	Grow faster than the auto industry	Did so each quarter; Q2 FY27 a record	Delivered
Aug 2025	Kharkhoda car alloy wheel Phase 1 on schedule	Commissioned, ramping from Q2 FY27	Delivered
Nov 2025	Inovance EV JV Phase 1 by Q2 FY27	Still waiting on China's approval	Missed
May 2026	Sunroof plant by end of FY27	On track per Q2 filing; expansion added	Too-early

The story has been the same for years: more content per vehicle, new plants, beat the industry. The numbers have followed. The only real slip is the Inovance EV joint venture, which depends on a Chinese approval outside management's control, and management has been open about it. Margins have stayed in the guided band but haven't climbed.

5. Bottom line

Durable earning trigger? → YES

Content growth per vehicle is a real and still-live driver, proven by a record Q2 and a string of new plants and orders. Sunroofs and EV parts add the next leg. The open question is margins and cash, not growth.

Management consistent? → YES

They've delivered on growth, plant timelines and the margin band for two years. The Inovance JV slip is a regulatory hold-up in China, flagged openly.

6. Checkpoints for next quarter

- Dec quarter sales growth stays ahead of vehicle industry growth
- EBITDA margin stays at eleven percent or better
- Inovance EV joint venture gets China's approval or a new plan
