

Integra Engineering India Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · BSE: 505358 · Report prepared 21 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public financials, annual filings and news record. This company holds no earnings calls — see Section 2.

1 Snapshot

Integra Engineering India builds metal parts and assembled sub-systems to other companies' drawings — mainly **sheet-metal fabrication** (cutting, punching, bending and welding flat steel and aluminium sheet into panels, enclosures and frames), plus wiring harnesses, control panels and aluminium metro-train interiors — from two plants at Halol, Gujarat, for railway and metro equipment makers such as Alstom and Siemens Mobility. It is 54.39% owned by Integra Holding AG of Switzerland, has no Managing Director (a CEO reports to a non-executive Swiss chairperson), and is a **contract manufacturer**: no branded product of its own, so revenue cannot exceed its customers' order flow. Its FY25 report puts **more than 90% of revenue in that contract-manufacturing bucket**, up from “more than 80%” a year earlier.

Item	Number	What it means in plain words
Market value and P/E	₹563 cr at ₹164/share; 37.9x	₹37.90 paid for every ₹1 of last year's profit — a profit that has shrunk two years running. 52-week range ₹118–₹270: the price roughly halved from its high.
Sales FY26 (vs FY25)	₹169 cr (vs ₹166 cr)	₹3 crore of growth, 1.7%, in a full year — below inflation. Q1 FY27 sales (₹44.30 cr) are below Q1 FY26 (₹45.73 cr). The business is flat.
Operating profit / OPM FY26	₹29 cr, 17% (FY25 ₹31 cr, 19%)	What is left of sales before interest, tax and depreciation — effectively EBITDA (Earnings Before Interest, Tax, Depreciation, Amortisation). Both fell.
Net profit FY26	₹15.4 cr (FY25 ₹18.5 cr; FY23 ₹18 cr)	Down 16.6% on the year and lower than three years ago . Earnings per share ₹4.48 against ₹5.29 in FY23. Book value ₹32.3.
Dividend	Yield 0.00%; payout 0% since FY15	No equity dividend in twelve years on record. FY26 reason: “the need to conserve the resources of the Company”.
Customer concentration	Top 3 = 70.48% of FY26 revenue	About ₹119 cr of ₹169 cr from three buyers — the biggest risk here, and <i>rising fast</i> : 53.03% (FY23) → 62.17% → 70.25% → 70.48% (FY26).
Exports FY26	₹21.2 cr, 12.6% of sales	Up from ₹6.1 cr in FY24 — the only growing line. Domestic revenue <i>fell</i> , ₹151.2 cr to ₹147.5 cr.
Debt and ROCE	Borrowings ₹22 cr (from ₹39 cr); ROCE 19%	Debt cut ₹17 crore — genuinely good. ROCE (Return On Capital Employed: operating profit as a % of all money, own plus borrowed, tied up in the business) fell from 24% in FY23–FY25; the new factory added capital, not profit.

2 Coverage — what this report is built on

No concall transcripts were available on Screener — this report is based on a global web deep-dive.

Verified directly: the Screener page (screener.in/company/505358/ — the ticker “INTEGRAEN” returns a 404) carries *Annual Reports* and *Announcements* sections and **no Concalls section at all**. The company holds no earnings calls, issues no results press release, publishes no investor presentation, and has never been rated — its FY26 governance report answers the mandatory item “*List of credit ratings obtained by the Company*” with “**Not applicable**”.

And the questions were asked. The minutes of the 44th AGM (17 July 2026) record that shareholders asked “various questions regarding the outlook, operation margins, **order book**, export market expansion, **capacity utilization** etc.”, which “were answered by the Chairperson one-by-one”. **None of the answers were minuted**, and the **management presentation given at that meeting was never published**. So the exact numbers a reader needs do exist inside the company and were spoken aloud once, to the room. They are not on the public record.

Sources used — Annual Reports FY2025-26 (44th, 136pp), **FY2024-25** and **FY2023-24**: Board's Reports, Management Discussion & Analysis, audited accounts and notes (integraengineering.in/userfiles/investor_file/, files 1782105471, 1750413828, 1718885464). **BSE filings**, ~50 announcements Apr-2025 to Aug-2026: FY26 audited results (20 May 2026), Q1 FY27 board outcome (16 Jul 2026), CFO resignation and appointment, RBI compounding orders, AGM proceedings. **MGT-7 annual return FY2024-25**. **Screener.in page 505358** (12-year profit & loss, 13-quarter results, balance sheet, ratios, cash flow, shareholding). **Company website**. **Integra Holding AG** (integra.ch): acquisition history, CHF 17 m 2024 revenue, 860 employees. **Q1 FY27 coverage**: MarketsMojo (17 Jul 2026), EquityBulls, ScanX, Business Standard / Capital Market; plus IIFL Capital, Whalesbook and Rail Analysis India. **Confirmed absent**: any credit-rating rationale (CRISIL, ICRA, CARE, Acuité, India Ratings, Infomercials, Brickwork); any order-book value; any order-win filing in 17 months of announcements; any investor presentation, press release or brokerage note. The company's news page has published nothing since October 2024.

2b Latest update highlights

Latest update highlights — Q1 FY27 (quarter ended 30 June 2026)

- **Revenue fell year-on-year.** ₹44.30 cr against ₹45.73 cr, down 3.1%. The 11.5% rise over the March quarter's ₹39.73 cr is the usual first-quarter bounce, not a new trend. Screener; BSE filing 16 Jul 2026; MarketsMojo
- **Margin still compressing.** Operating margin 16.41% — 48 basis points (hundredths of a percentage point) above March, but 345 basis points below Q1 FY26's 19.86%. Four straight quarters at 15.7–16.4%, against 19–21% through FY25. Screener; MarketsMojo cites raw-material and employee cost pressure
- **The profit “rebound” is a tax artefact.** Net profit ₹4.51 cr, +32.3% on the quarter, –11.2% on the year. Pre-tax profit rose only 19.3% sequentially; the tax rate fell 27.60% → 19.75%. Hold tax constant and profit rose about 19%, not 32%. Screener; EquityBulls
- **The finance chief left and the seat sat empty.** Kunal Thakrar resigned 23 April 2026 “due to personal reasons”, served to 29 May; Kinnar Joshi (Cost Accountant, MBA, 21 years) started 16 July 2026 — a seven-week vacancy over year-end reporting. BSE Reg-30 filings
- **FY26 closed flat and less profitable.** Revenue ₹16,870.91 lakh vs ₹16,585.68 lakh (+1.7%); profit after tax ₹1,542.16 lakh vs ₹1,848.77 lakh (–16.6%). Depreciation rose 33% and finance cost 19% on the new buildings; other expenses rose 15.9% on 1.7% more revenue. **No dividend.** FY26 results filing and Annual Report
- **Exports are the only line that grew — and they carried the whole year.** Export revenue ₹613.77 lakh (FY24) → ₹1,466.72 lakh (FY25) → ₹2,123.24 lakh (FY26). Domestic revenue fell from ₹15,118.96 lakh to ₹14,747.67 lakh. Note 42, FY26 Annual Report

2c Business mix & capacity

What it makes and for whom. Fabricated enclosures and welded panels for electric locomotive propulsion systems (WAG/WAP class, 6,000–12,000 horsepower); aluminium metro interiors — ceilings, side and window panels, door pillars, saloon doors, driver cabs; and railway control products — RDSO-approved (Research Design and Standards Organisation, Indian Railways' approval body) signalling relays, LED signals and Fuse Automatic Changeover Systems, plus CE-marked standard enclosures. FY25 volumes: 3,475+ locomotive enclosures, interiors for 202+ metro cars. The FY25 report named the buyers — Alstom, Siemens Mobility, Medha Servo, CAF Power & Automation, CG Power, BHEL, Hind Rectifier, Sepsa Medha — on projects including Delhi Metro, RRTS Delhi–Meerut, Vande Bharat and the R211 New York subway. **The FY26 report dropped those names entirely**, saying only “leading original equipment manufacturers in India and select global markets” — disclosure going backwards in the year the top three customers reached 70.5% of revenue and 76% of trade receivables.

Revenue split — barely disclosed. A single reportable segment: no product, customer or project split in any annual report. The only mix that exists anywhere is the statutory FY25 annual return (Form MGT-7), splitting turnover by industry code: **90.89% fabricated metal products, 9.11% electrical equipment** — sheet metal and metro interiors nine-tenths, relays and signalling one-tenth.

Capacity — NOT DISCLOSED. No installed-capacity figure and no utilisation percentage in the FY24, FY25 or FY26 reports. Disclosed instead: two Halol units on a 75,000 sq m site of which 50,000 sq m is still open land; a 70,000 sq ft production building completed November 2024 and an admin block January 2025; a 900+ workforce, 254 of them permanent. No land was bought. The FY26 outlook asks the company to “maximize utilisation of newly added capacities”: an admission in its own words that the new capacity is not full, with no number attached.

Capex is over. FY25 added ₹32.33 cr of gross block, of which **₹20.76 cr was buildings**; cash capex was ₹25.96 cr in FY25 and ₹4.98 cr in FY26, and capital work-in-progress (money in assets not yet in use) is **nil** at March 2026, from ₹9 cr at FY24. **₹26 crore of FY25 capex has so far produced ₹3 crore of extra annual revenue.** Research and development spend across FY24–FY26: **Nil, all three years.** Working capital is heavy — a 213-day cash conversion cycle, about seven months between paying for steel and collecting the cash. Operating cash flow fell to ₹15 cr from ₹27 cr, but with capex gone free cash flow was ₹10 cr, the best on record, all of it into cutting debt.

The Swiss parent. Integra Holding AG holds 54.39% and is itself owned by a Swiss foundation; Adrian Oehler sits on this board and is CEO of the parent. Related-party dealings are trivial and run mostly the *other* way (₹1.07 cr of management-contract income earned from Swiss affiliates in FY26 against ₹18 lakh of purchases), and **no royalty, technical fee or brand fee is charged by the parent in any of the three years.** One item is not trivial: in FY25 the company paid Integra Holding AG **₹22.32 crore** to redeem 1.24 crore 4% cumulative preference shares and settle ₹9.92 crore of accumulated preference dividend — in the same year it spent ₹26 crore on buildings, which is why borrowings rose. Ordinary shareholders got nothing. The lone associate, Integra Systems Pvt Ltd, has been in NCLT liquidation since August 2024.

One correction for the record. Founded 1981 as Padmatex Engineering, this became Schlafhorst Engineering India (textile machinery) before Integra Holding bought it in January 2011 and renamed it. **No elevator or lift product appears in any filing or on the website** — the disclosed business is railway, metro and rolling stock, with industrial enclosures on the side.

3 Earning-trigger thesis

Verdict on the trigger: there isn't one large enough to matter — and that is the finding

An earning trigger is a specific, identifiable change that should make profit materially bigger within a knowable time. Searched across three annual reports, seventeen months of exchange filings, the website, the parent's disclosures and the trade press, **Integra Engineering India has no such trigger on the public record.** Its one growing line is exports, up 3.5x in two years — but at ₹21 crore that is 12.6% of revenue, and in FY26 exports grew ₹6.6 crore while the domestic book *shrank* ₹3.7 crore. No order book, no target, no utilisation number, no order-win announcement in seventeen months. Nothing below is invented to fill the gap.

Trigger	What the public record says	Evidence so far	Horizon	Strength
Exports scaling up	₹6.14 cr (FY24) → ₹14.67 cr (FY25) → ₹21.23 cr (FY26). Backed by a Global Supplier Agreement with Alstom signed FY25, American Welding Society qualification held because “this is the prerequisite of our export customers in the USA”, and EN 15085 / EN 17460 certification for European rail work.	Hard numbers, disclosed three years running in the segment note, plus a named agreement and named work (R211 New York, CAF Australia, Docklands Light Railway). The only quantified growth in the company. Caveat: foreign exchange actually <i>earned</i> dipped to ₹10.85 cr from ₹12.02 cr.	Running; needs 3–5 more years at this rate to matter	Medium
Filling the new factory	₹20.76 cr of buildings capitalised in FY25; a 70,000 sq ft production block live since November 2024. FY26 outlook lists “maximize utilisation of newly added capacities”.	Working against it. A full FY26 with the building open produced ₹3 cr of extra sales, a 2-point margin fall, depreciation up 33% and ROCE down 24% → 19%. Fixed costs arrived; volume did	Unclear — already 21 months late	Weak

not, and no utilisation figure is ever given.

Indian railway capex cycle	The FY26 Management Discussion leans hard on it: railway allocation ₹2.04 lakh cr (FY23) rising to ₹2.93 lakh cr (FY26); locomotive output 1,681 in FY25 against an FY26 target of 1,826.	All macro, none company-specific. Railway capex rose 10.6% in FY26; this company's domestic revenue fell 2.5%. A tide that has not lifted this boat is not a thesis.	Ongoing, unowned	Weak
-----------------------------------	---	---	------------------	-------------

Read across the table: the strongest thing in this business is not growth — it is that the balance sheet got safer while the profit got smaller: borrowings ₹39 cr → ₹22 cr, debt-to-equity 0.41 → 0.20, free cash flow ₹10 cr, capital work-in-progress nil. That is real and fully verified, but it is de-risking, not earnings: interest is ₹2.9 cr on a ₹169 cr business, so erasing all of it moves profit a few percent. Three further candidates were considered and rejected. **Margin recovery:** four straight quarters at 15.7–16.4% operating margin against 19–21% a year earlier, with no stated plan beyond “automation and digitalization”. **Mix shift to higher-value assemblies and system integration** (asserted in the FY26 Management Discussion): unverifiable, because single-segment reporting leaves no mix data to check it, and contradicted by a margin that fell 19% → 17% on Nil research spend for three straight years.

4 Management consistency scorecard

Read this first

Because this company holds no earnings calls, **every promise scored below was written by the company itself in an annual report or filing** — never spoken to analysts who could push back, demand a number, or return to it a quarter later. Shareholders did ask about the order book and capacity utilisation at the 2026 AGM; no answers were recorded. So these verdicts are **directional only**: the company's own written words against its own audited numbers the following year. A fair test of outcome; a weak test of candour.

Period	Promised / stated	What happened	Verdict
FY24 report Jun 2024	“Prospects for the coming years are promising... targeting further growth”; construction started on a 70,000 sq ft production building and admin block; more machinery, automation and ERP spend.	Buildings delivered on time (November 2024 and January 2025) and FY25 revenue grew 13% to ₹166 cr at a record 19% margin. The same report also disclosed candidly that “more than 80% of total revenue” comes from contract manufacturing so “the business depends on customer requirements” — exactly what then went wrong.	Delivered, and honest about the risk — the clean win in the record
FY25 report Jun 2025	“The Company's outlook for the coming years is highly promising... targeting continued growth”; broaden the portfolio; explore exports. Announced a Global Supplier Agreement with Alstom .	FY26 revenue ₹166 cr → ₹169 cr (+1.7%), the domestic book falling. Profit after tax –16.6%; margin 19% → 17%; ROCE 24% → 19%; return on net worth 21.48% → 14.94%. Exports grew strongly, but no order value or timeline was ever attached to the Alstom deal. “Continued growth” arrived on no other line.	Missed — “highly promising” produced a 1.7% year; the Alstom deal is real but unquantified
FY26 report Jun 2026	“With a robust order pipeline... the Company expects steady and sustainable growth”; objectives include “maximize utilisation of newly added capacities” and “increase share in export markets”.	Too early to score; the first data point is negative — Q1 FY27 revenue down 3.1% year-on-year, margin 345 basis points below. A “robust order pipeline” asserted with no number. The same report deleted the customer list its predecessors printed.	Open, and disclosure went backwards
FY15–FY26 dividend	Payout 0% for twelve consecutive years. FY24 and FY25 justified it by “further capital investment into the infrastructure”; the FY26 wording quietly dropped that reason , keeping only	Capex has collapsed to ₹5 cr and capital work-in-progress is nil, so the stated reason has expired — yet still no dividend, while ₹22.32 cr went to the Swiss parent in FY25. Reserves rose ₹59 cr → ₹108 cr as ROCE fell 24% → 19%; capital retained, earning less.	Consistent policy, poor result for minorities

“the need to conserve the resources of the Company”.

FY25– FY27 governance	Standard commitments: independent-director majority, audit committee oversight, related-party policy reviewed quarterly.	Clean where it counts — no auditor qualification, no fraud, no royalty taken by the parent. But an RBI order of 11 Dec 2025 compounded foreign-exchange breaches for ₹21.4 lakh (late FC-GPR and FLA filings), with a secretarial-audit flag on delayed reporting of foreign-currency borrowing, four independent directors turning over in four months of 2025, and a seven-week CFO vacancy.	Compliant in substance, sloppy in process
-------------------------------------	--	---	---

5 Bottom line

EARNING TRIGGER: NO — the arithmetic says this business has stopped growing, and nothing on the public record is big enough to restart it.

Take the numbers on their own terms. Revenue went ₹166 crore to ₹169 crore between FY25 and FY26 — 1.7%, in a year when Indian railway capital spending rose 10.6% — and the domestic half actually fell, ₹151.2 crore to ₹147.5 crore. Quarterly revenue in June 2026 (₹44.30 crore) is *below* June 2025 (₹45.73 crore). Net profit was ₹18 crore in FY23 and is ₹15.4 crore in FY26: four years, no growth, earnings per share lower now (₹4.48) than then (₹5.29). Operating margin slipped 19% to 17%. ROCE fell 24% to 19% because ₹26 crore went into buildings that have so far returned ₹3 crore of extra annual sales, while depreciation rose 33%. The stock trades at 37.9 times that shrinking profit and has paid no dividend in twelve years. Those are the facts; the reader can judge them.

The one honest positive is exports — ₹6.1 crore, ₹14.7 crore, ₹21.2 crore across FY24–FY26, backed by a real Alstom global supplier agreement and by welding and bonding certifications European and American rail customers require. If that compounds at 45% it becomes material around FY29. But it is 12.6% of revenue and currently the *only* thing keeping the top line from falling. Meanwhile 70.48% of revenue comes from three customers, up from 53.03% three years ago, in a business where over 90% of revenue is contract manufacturing and, in the company's own words, “depends on customer requirements”. Rising concentration into a flat top line is the risk getting worse. What a reader needs is a large, dated, named order that fills the new factory: seventeen months of exchange filings contain not one order announcement, no order-book value has ever been published, no utilisation percentage has ever been disclosed. Stating that there is no trigger is the accurate finding, not a failure to find one.

MANAGEMENT CONSISTENCY: MIXED — straight with the reader about the risks, but three years of “promising” language against a flat top line, disclosure now going backwards, and no forum in which anyone can force a number.

Their credit is not small. The FY24 report named the exact vulnerability — over 80% of revenue from contract manufacturing, dependent on customer order flow — a year before it showed up in the numbers, and delivered the building programme on schedule. The FY26 report does not hide the deterioration: it prints the margin fall, the return-on-net-worth collapse from 21.48% to 14.94%, and the reasons. Debt was cut to ₹22 crore. Related-party dealings run mostly in the company's favour and carry no royalty or brand fee — better than many multinational-controlled Indian subsidiaries. Against them is the gap between adjective and outcome: “highly promising” in June 2025 produced 1.7% revenue growth and a 17% profit fall; “a robust order pipeline” in June 2026 has produced a quarter with revenue down year-on-year. Both are unfalsifiable as written. Worse, the FY26 report **deleted the named customer list** its predecessors carried, in the year concentration hit 70.5%. And twelve years of zero equity dividend sits beside ₹22.32 crore paid to the parent in FY25 — contractually defensible, but the optics are that the controlling shareholder was paid and the minority was not, while retained capital earned a falling return.

The evidence limitation, stated flatly. This read rests almost entirely on documents the company published on its own timetable, without cross-examination: no transcripts, no presentations, no press releases, no rating agency's view, no brokerage coverage. The audited history is reliable; the forward-looking story is one-sided by construction. And the gap is real, not theoretical — the AGM minutes record shareholders asking precisely about the order book and capacity utilisation, and record no answers. For a company whose case must rest on future order flow, that absence is itself a material fact.
