Bhageria Industries Ltd

Concall Tracker - Q2 FY27 update (quarter ended 30 Sep 2026) | NSE: BHAGERIA · BSE: 530803 | Report date: 06 November 2026 | No new earnings call: built from the 28 Oct 2026 results filing and public coverage

This report picks up from our Q1-2027 read of Bhageria. The company held no earnings call for the September quarter, its fourth straight results season without one. So this update is a web deep-dive on the Jul-Sep 2026 results, exchange filings and news. It asks the same two questions: is there a durable reason profits should keep growing (an "earning trigger"), and is management doing what it said it would?

1. Snapshot

What the business does: Bhageria makes dye intermediates, the chemical building blocks dye makers turn into colours for cloth and leather (mainly H-Acid, Vinyl Sulphone and Gamma Acid). It also sells sulphuric acid, runs a small solar-power business selling electricity to state utilities, and has a tiny loss-making pharma unit. Chemicals are about 98% of sales. The plants are at Tarapur (Maharashtra) and Vapi (Gujarat).

Figure	Value	Plain-English read
Market capitalisation	₹1,569 crore	What the company is worth on the market at scrape time, up from ₹963 crore at our last report. The share (₹361) has nearly tripled from its 12-month low of ₹128.
Q2 FY27 revenue (consolidated)	₹455.7 crore	Sales for Jul-Sep 2026, more than double the ₹204 crore of a year ago and up 59% on the June quarter. Its biggest quarter ever by a wide margin.
Q2 net profit (consolidated)	₹55.7 crore	Almost five times the ₹11.5 crore of a year ago. Standalone profit was ₹58.3 crore.
Operating margin (standalone)	18%	Operating profit per ₹100 of sales, up from 11% a year ago and 14% in June. The first real margin recovery in years.
Other income	~₹4-5 crore	Down from ₹17 crore in June. This quarter's profit came from the factory, not from one-off income.
H1 FY27 revenue	₹742 crore	Six months of sales is already 85% of the whole of FY26 (₹871 crore).
Valuation (P/E)	~13 times	The share costs about 13 years of trailing profit. Cheap on paper, if these earnings last.

2. Coverage: no concall this quarter

No new concall transcript was available on Screener. This update is based on a global web deep-dive. Bhageria has held exactly one earnings call in its listed history (28 Oct 2025, already covered in the prior report). There has been no call for the Dec 2025, Mar 2026, Jun 2026 or Sep 2026 quarters.

Sources used: Q2/H1 FY27 unaudited results approved 28 Oct 2026 (consolidated, standalone and segment figures, as reported by Kalkine, Univest, Whalesbook and Sahi), Screener.in standalone quarterly data, and the prior Q1-2027 report for the backstory. The company issued no management commentary with these results that we could find.

Quarter	Call date	How it was read
Q2 FY26 (the only call ever)	28 Oct 2025	Carried forward from the Q1-2027 report
Q3 FY26 → Q1 FY27	No calls	Carried forward from the Q1-2027 report (filings and annual report)
Q2 FY27 (Jul-Sep 2026)	No call (results 28 Oct 2026)	Newly researched from the results filing and public coverage ★

★ Latest update highlights - Q2 FY27 results (filed 28 Oct 2026)

- **Chemicals exploded.** Chemical segment revenue was ₹446.7 crore against ₹197.5 crore a year ago. Segment profit before interest and tax was ₹80.4 crore against ₹19.8 crore. That's an 18% segment margin, up from 10% a year ago and 11.5% in June. Read: Bhageria is selling a lot more and earning much more on each rupee of sales.
- **Probably prices more than tonnes.** The plants were already running at 95-97% through FY26 and the H-Acid expansion was small. A 59% jump in sales in one quarter from full plants points to much higher selling prices, though that's our inference because the company discloses no volumes or prices. Read: if prices drive it, it can fade just as fast.
- **Profit is clean this time.** Last quarter a third of pre-tax profit was unexplained other income. This quarter other income was small and almost all profit came from operations.
- **Solar grew, pharma still bleeds.** Solar revenue was ₹8.1 crore (₹4.5 crore a year ago) with a small profit as more of the 32 MW came online. Pharma revenue was ₹0.07 crore with a ₹1.1 crore loss. Read: neither moves the needle.
- **Still no word on plasticizers.** The new line started in Dec 2025, and management said in Oct 2025 it could do about ₹240 crore a year. It still doesn't show up anywhere in the disclosures. The rare-earth subsidiary is now consolidated, with no reported activity.

Tone: no management commentary available. Exchanges also queried a sharp share-price move in September 2026, which a secondary source described as routine.

Business mix & capacity (quick-glance panel)
Domestic vs export: not disclosed for the quarter. The latest known split (FY26 annual report) was about 35% exports, with China taking 74% of those. Read: a big slice of sales depends on one foreign buyer country.
Capacity utilisation: no new figure. It was 95-97% through FY26, and management said in Oct 2025 any further growth needs a new plant. None has been announced. Operating cash flow was ₹52 crore for the half-year and total assets grew to ₹1,030 crore from ₹860 crore in March.

★ Since our last report

Builds on the Q1-2027 report (which covered the only call, 28 Oct 2025, plus filings to Jul 2026). Prior verdicts: **Trigger MAYBE · Management consistent NO**.

Prior read	What we said then	What the new results show	Movement
Trigger: export boom (China pull)	Real and large, but one-country and cyclical	Sales more than doubled, segment margin 18%	Improving
Margins back to 13-14% ("Definitely")	Missed in FY26. 14% in Q1, helped by other income	18% this quarter, mostly operational	Delivered, late
Other income inflating Q1 profit	A third of Q1 pre-tax profit	Back to a small figure	Resolved
Plasticizer revenue potential (~₹240 crore a year)	No numbers ever published	Still none	Still dark
Communication with shareholders	One call, then silence	Fourth results season with no call	Unchanged
Rating watch and pollution-board issues	Open questions	No update we could find	Unknown

Verdict change this quarter: the trigger stays MAYBE but is clearly stronger, because the margin recovery management promised has finally shown up, and from operations. Consistency stays NO. The numbers are better, but the company still isn't explaining them.

3. Earning-trigger thesis ★

Whatever is driving Bhageria, it's working hard right now. Revenue doubled, margin jumped to its best in years, and one quarter's profit beat the whole of last year's. The likeliest driver is the one the annual report points to: Chinese buyers short of their own dye intermediates, pulling product from one of the few other suppliers. The trouble is the same as last time. It looks like a price-led trade, not something Bhageria controls. The plants are full, no new plant has been announced, and management won't say what's happening.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Export / China pull	"Focusing on the export segment more" (Oct 2025)	Chemicals revenue more than doubled. Segment margin 18%	Now, cyclical	Strong today, durability unproven	↑ improving
H-Acid debottleneck	400 → 500 tonnes a month	Done in early 2026	Done	Delivered, small	unchanged
Plasticizers	About ₹240 crore a year potential	No revenue ever disclosed	Unknown	Unproven	unchanged: still dark
Solar (32 MW)	Steady, contracted income	Revenue nearly doubled to ₹8 crore a quarter	Ongoing	Strong but tiny	↑ slightly
Pharma / rare earth	Pharma to break even in two years. Rare earth: nothing said	Pharma revenue near zero, still losing money. Rare earth inactive	-	Not triggers	unchanged

4. Management consistency scorecard

Period	What was promised / said	What actually happened	Verdict
Oct 2025 call	FY26 chemicals revenue ₹725-775 crore	₹830 crore	Delivered
Oct 2025 call	H-Acid expansion and plasticizer line by Dec-Jan	Both built on time	Delivered
Oct 2025 call	Margins to 13-14%: "Definitely"	FY26 fell to 11.7%. Q2 FY27 hit 18%	Late, now beaten
Oct 2025 call	Exports mainly to SE Asia and Europe. "No threat from China"	Annual report shows China at 74% of exports	Contradicted
Oct 2025 call	Plasticizer results to be shared in Q1 FY27	Two quarters past, nothing shared	Missed
Nov 2025 - Oct 2026	Implied: keep talking to shareholders	No call for four straight quarters, through a plant shutdown, a rating watch and now a doubling of sales	Missed

Narrative drift: the strategy hasn't drifted. It's the same dye-intermediate business with small additions. The problem is the absence of a narrative at all. A company whose quarterly profit just jumped nearly five-fold has said nothing about why, how long it can last, or how much depends on China. The factory keeps delivering. The disclosure doesn't.

5. Bottom line - two verdicts

Durable earning trigger? → MAYBE

vs last quarter: unchanged (stronger)

What moved: the margin recovery is real and came from operations this time, and the scale of the jump is hard to ignore. Today's earnings are the best this company has posted in years. It stays MAYBE because nothing shows it's durable. The driver looks like prices in a market where China is short of supply, the plants were already full, no new

capacity is announced, and the one product that could add real growth (plasticizers) has never been shown in the numbers. A great quarter, but the kind that can reverse when China's supply comes back.

Management consistent? → NO

vs last quarter: unchanged

To be fair: the factory keeps doing what it's told, and the margin promise has now been beaten, if late. But consistency also means telling shareholders what's going on, and Bhageria hasn't held a call in a year. The plasticizer numbers promised for Q1 FY27 never came. The export story told on the only call was contradicted by its own annual report. And a profit jump this big arrived with no explanation at all. Until management starts talking, this stays a NO.

Sources: Bhageria Industries unaudited Q2/H1 FY27 results approved 28 Oct 2026 (consolidated, standalone and segment figures as reported by Kalkine Media, Univest, Whalesbook and Sahi Markets, 28-29 Oct 2026).
