Automotive Stampings & Assemblies Ltd

Concall tracker, Q2 2027 report (results for the quarter ended 30 Sep 2026) · NSE: ASAL · Web deep-dive (no concalls)

1. Snapshot

A Pune-based Tata AutoComp company that presses and welds sheet-metal body parts, and lately battery trays and seat frames, for vehicle makers. Tata Motors (trucks and cars) is by far its biggest buyer. It earns a thin margin on large volumes, so it lives or dies by how many vehicles its customers build. Five plants: Chakan I and II (Pune), Pantnagar, Sanand and Jamshedpur.

Number	Value	Plain read
Market cap	₹746 cr	A small company; Tata AutoComp owns 75%.
FY26 sales	₹891 cr	Up about 15% after a weak FY25.
FY26 profit	₹28 cr	Helped by a small tax credit; profit before tax rose about half.
Q2 FY27 sales	₹337 cr	Up 59% on the year, its biggest quarter by a distance.
Q2 FY27 profit	₹10 cr	More than double a year ago, though now paying normal tax.
Operating margin	~6%	Only ₹6 of every ₹100 of sales left before interest and depreciation; flat for three years.
Borrowings	₹106 cr (Sep 2026)	Down from ₹149 cr in Mar 2025; still large against a net worth of about ₹51 cr.
P/E	~20x	Not expensive for a growing auto parts maker, but the earnings base is thin.

2. Coverage

No concall transcripts were available on Screener. This report is based on a global web deep-dive. The company doesn't hold earnings calls. Sources: Screener.in financials (13 quarters, 12 years), the FY2025-26 directors' report (36th annual report, via IndiaInfoline), the FY2024-25 directors' report, NSE filings (BRSR, AGM notice), and results coverage on Sahi, Upstox and Whalesbook.

Latest update highlights: Q2 FY27 results (Oct 2026, from filings)

- Sales ₹337 cr, up 59% on the year and a third on the June quarter. Third quarter running of fast growth (+26%, +36%, +46%, now +59%).
- Net profit ₹10 cr, more than double. Operating margin still only about 6%: the extra sales came at the same thin margin.
- Borrowings down to ₹106 cr and net worth now positive and rising after years of accumulated losses.
- No commentary was published with the results, so the reason for this quarter's jump isn't stated by the company. The annual report credits higher off-take by its car and truck customers.

Business mix & capacity

Domestic vs export: almost all sales are in India; small supplies to Tata AutoComp partner customers in Mexico and Poland started in FY26. Not broken out further.

Capacity utilisation: not disclosed. New robotic lines for battery trays and seat structures, two friction-stir-welding machines for aluminium battery trays, and a robotic line at Sanand for Tata Motors were added in FY26.

3. Earning Trigger thesis

The bull case is simple: Tata Motors' volumes are up sharply, and ASAL rides along, while its debt-laden balance sheet is finally healing. On top, it's slowly widening its customer list (MG Motor body parts, seat frames for Tata's seating JV, EV battery trays for Tata and Octillion, a little export) so it's less of a captive. The catch: the margin hasn't moved in three years, and almost everything depends on one customer group's production plans.

Trigger	What the company said	Evidence so far	Time horizon	Strength
Anchor customer volumes	Growth from "higher off-take by our OEM customers" (FY26 report)	Four straight quarters of rising growth	Now	Moderate: real, but borrowed from Tata Motors' cycle
EV parts (battery trays, cooling tubes)	"Will continue to focus on expanding its EV related manufacturing capabilities"	Robotic battery tray lines and FSW machines installed	FY27-28	Emerging
New customers	MG Motor body parts, Tata seating JV, Mexico/Poland via TACO	Supplies started in FY26	FY27-28	Emerging, small so far
Balance sheet repair	Repaid inter-company deposits, cut working-capital debt	Debt-equity from 17x to 3.4x; net worth positive	Ongoing	Strong

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	"Has repaid inter-Company deposits, reduced working capital borrowing" (FY26 directors' report, Jul 2026).
New business	Yes	Body-in-white parts for MG Motor newly started; seat structures for TM Automotive Seating; supplies to customers in Mexico and Poland (FY26 report).
Margin up	No	Operating margin flat around 6-7%.
New management	No	Only a new company secretary (Mar 2026).
New capacity	No	New robotic lines and welding machines, but no new plant.
Big orders	No	No order book disclosed.
Turnaround	Yes	Net worth moved "from negative to positive" (FY26 report) after years of losses up to FY21.
Promoter buying	No	Tata AutoComp stake steady at 75%.

Single concrete driver: much higher pick-up of body parts by Tata Motors' car and truck plants, while debt falls and EV battery trays and new customers like MG Motor add a little on top.

4. Consistency scorecard

Period	What was said	What happened	Verdict
FY25 report (Jul 2025)	EV growth to continue into FY26; Octillion onboarded for battery trays	Battery tray lines added; FY26 sales +15%	Delivered

FY25 report	Seek more business within the Tata AutoComp group	Seat structures for TM Seating, TitanX servicing, exports via TACO	Delivered
FY25-26	Bring debt down	Borrowings ₹149 cr → ₹106 cr	Delivered
FY26 report	Grow with anchor customers in FY27	H1 FY27 sales up about half	Delivered so far

Narrative drift: there's little to drift: the company makes no numeric promises and holds no calls, and its annual reports repeat the same modest plan (grow with Tata, add EV parts, cut debt). What it has said, it has done. The flip side is there's almost nothing to hold management to, and the annual report itself flags customer concentration as the main risk.

5. Bottom line: two verdicts

Durable earning trigger? → **MAYBE**

The growth is real and the balance sheet is mending, but the driver is Tata Motors' own volumes, which swing with the auto cycle. The margin hasn't improved, so a slowdown at Tata would hit straight away. EV parts and new customers are the part that could make it durable, and they're still small.

Management consistent? → **MAYBE**

What little the company has said, it has delivered. But with no calls and no targets, there's not much track record to judge. Treat it as consistent on the low bar it sets itself.

6. Checkpoints for next quarter

- Sales keep growing on the year in the December quarter
- Borrowings keep falling
- Operating margin holds while sales grow

No concall transcripts were available; checkpoints are taken from the reported numbers and annual-report plans. Not investment advice. Do your own due diligence.
