

Jubilant Ingrevia Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: JUBLINGREA · BSE: 543271 · Report prepared 3 Aug 2026
Not investment advice. Do your own due diligence. An AI-generated reading of the company's own earnings-call transcripts and public financials.

1 Snapshot

What the business does: Jubilant Ingrevia is an Indian chemicals maker that runs three businesses off a shared set of plants. **Specialty Chemicals** (44% of sales) makes pyridine and picoline — building-block molecules the company is the world leader in — plus diketene derivatives, fine chemicals, and **CDMO** work. CDMO stands for *contract development and manufacturing*: making a specific molecule to order for someone else's patented drug or crop-protection product. **Chemical Intermediates** (38%) is the commodity end — acetic anhydride, ethyl acetate and other "acetyls" sold on price into paracetamol and agrochemical supply chains. **Nutrition & Health Solutions** (18%) makes vitamin B3 (niacin and niacinamide), choline chloride and animal-feed premixes. The whole investment case rests on one idea: shifting the profit mix out of the low-margin commodity business and into specialty and CDMO.

Measure	Value	What it means in plain words
Market cap	₹12,070 cr	What the market thinks the whole company is worth — a mid-cap.
FY26 revenue	₹4,388 cr	Total sales in the year to March 2026, up 5% on FY25's ₹4,178 cr. Growth is slow.
FY26 EBITDA	₹567 cr	Operating profit before interest, tax and depreciation — up 9% on FY25 and 33% on FY24.
FY26 operating margin	12.9%	Thirteen paise of operating profit per rupee of sales. Was 10.3% in FY24 — margins are genuinely rising while revenue barely moves.
Q1 FY27 revenue	₹1,300 cr	Best quarter in 15 quarters, up 25% on last year. The subject of this report.
Q1 FY27 EBITDA	₹209 cr	Up 36% on last year and 22% on the prior quarter. Operating margin 16.1%, versus 12.9% for FY26.
Q1 FY27 net profit	₹106 cr	Profit after everything, up 41% year-on-year.
FY27 EBITDA guidance	₹750–800 cr	Management's own target for the full year — a 32% to 41% jump on FY26. Held unchanged after Q1.
Stock P/E	35.0	Investors pay ₹35 for every ₹1 of last year's profit. Expensive — a lot of the recovery is already in the price.
ROCE (FY26)	12.4%	Return on capital employed. Modest for a specialty chemicals company, and well below the 30% of FY22.
Net debt / EBITDA	0.99x	Debt equals about one year of operating profit. Comfortable; net debt fell 11% in FY26.

2 Concall coverage

Q1 FY27	23 Jul 2026	Yes — full read, latest call ★

Coverage note. Thirteen transcripts spanning Nov 2023 to Jul 2026 — every quarterly call the company has held over that period, plus the Feb 2025 Investor Day, with no gaps. The latest call (Q1 FY27) was independently checked against Screener's concall listing and confirmed present. Screener holds one older item, a May 2021 call, whose file is broken on Screener's own servers; it falls well outside the three-year window and does not affect anything here.

★ Latest concall highlights — Q1 FY27 (call held 23 July 2026)

- **The best quarter in nearly four years.** Revenue ₹1,300 cr (+25%), EBITDA ₹209 cr (+36%), profit ₹106 cr (+41%). Operating margin 16.1% against 12.9% for FY26. On the face of it, the mix-shift story finally arriving.
- **But most of the improvement came from the commodity business, not the specialty one.** Of the roughly ₹55 cr of extra EBITDA versus last year, about ₹40 cr — near three-quarters — came from Chemical Intermediates, where acetyls prices rebounded on Middle East supply disruption. Segment EBITDA there was ₹57 cr, up 240%. An analyst put this to management directly; they did not dispute it.
- **Specialty Chemicals had an ordinary quarter.** Revenue ₹533 cr, up 11%, but segment EBITDA only ₹139 cr, up 7% — so the margin actually slipped from 27% to 26%. Management attributed it to pyridine price pressure from Chinese overcapacity, and to the big CDMO customer asking them to **pause shipments** while raw-material prices were elevated.
- **The \$300 million CDMO contract is running, but the volumes are not committed.** The plant was built in 14 months and started dispatching in March 2026. The innovator has not given volume visibility for the rest of the year, and management said it needs clarity "within the next month or so" to plan Q3. They stressed the contract has "full protection" — they get paid the expected EBITDA even if volumes do not come.
- **Guidance held, not raised.** Asked twice whether a 36% first quarter justified lifting the ₹750–800 cr full-year EBITDA target, the CFO declined. Confirmed molecules in the CDMO pipeline rose from 20 to 25, but the ₹1,500 cr peak-revenue figure attached to them was *not* increased, because the new molecules are early-stage.

2b Business mix & capacity

Segment	FY26 revenue	Q1 FY27 revenue	Q1 FY27 EBITDA	Plain read
Specialty Chemicals	₹1,937 cr (44%)	₹533 cr (41%)	₹139 cr @ 26%	The profit engine. FY26 EBITDA ₹510 cr at a 26.3% margin, up 21% on a revenue rise of just 7% — pure mix improvement. Margin has held 26–27% for six straight quarters.
Chemical Intermediates (commodity acetyls)	₹1,662 cr (38%)	₹524 cr (40%)	₹57 cr @ 11%	The commodity leg. Normally earns 2–4%; this quarter earned 11% because acetic-acid prices spiked. Its share of revenue went up, not down, in Q1 FY27. Management guides it to only ~₹100 cr of EBITDA for the full year — i.e. they expect this to fade.
Nutrition & Health	₹790 cr (18%)	₹243 cr (19%)	₹36 cr @ 15%	Vitamin B3 and choline. FY26 EBITDA ₹100 cr at 12.7%. Q1 FY27 was its best quarter in three years, helped by higher niacinamide and choline prices — which management warned may soften from Q3.

Capacity utilisation. Pyridine and picoline: 50,000 tonnes a year, running at 95%-plus as of Q1 FY27 (was 80–90% through FY26) — this plant is effectively full, so growth here has to come from making more valuable derivatives, not more tonnes. **The cGMP niacinamide plant at Bharuch** (cGMP = pharmaceutical-grade manufacturing standard), commissioned January 2025 with 5,000 tonnes of capacity, **is running at about 50% of its designed rate**, with management targeting 70%-plus by March 2027 — behind the "60–70% sometime next year" said in Oct 2025. **The new Bharuch agro-CDMO plant** built for the \$300m contract is running smoothly but below contracted volumes because the customer paused offtake. **Newly built capacity across the group sits at roughly 50% utilisation** (management, Feb 2026) — meaning a large slice of the ₹2,000 cr already spent is not yet earning. **Next capex:** the Gajraula multipurpose plant (MPP-8) is under construction for commissioning by end-December 2026; FY27 capex guided at ₹400–500 cr.

Domestic versus export split: not disclosed. Jubilant Ingrevia does not publish an export percentage, and it was not given on any of the thirteen calls reviewed. What management has said: international sales are focused on Europe, the United States and increasingly Japan; the \$300m CDMO contract is an export order; choline exports to Europe are growing; and the company's dollar import bill is roughly as large as its dollar exports, so currency moves largely cancel out. No number is invented here because none exists in the disclosures.

★ 3. Earning-trigger thesis

The promise, made in May 2024 and detailed at the Feb 2025 Investor Day, is called **Pinnacle 345**: three times the revenue and four times the EBITDA within five years, off the FY24 base — ₹10,000–12,000 cr of sales and roughly ₹1,700 cr of EBITDA by FY2030. The mechanism is a deliberate shift of capital and effort out of commodity acetyls and into specialty, CDMO and premium nutrition. **The margin half of that promise is visibly working.** Specialty EBITDA has roughly doubled in two years to ₹510 cr, its margin has moved from 23% to 27% and stayed there for six quarters, group operating margin has gone 10.3% → 12.4% → 12.9% → 16.1%, and ₹2,000 cr of capex has been fully spent and is now filling up. **The revenue half is not working at all.** Sales have gone from ₹4,136 cr to ₹4,388 cr in two years — 3% a year against the ~25% a year the target needs. This is a genuine margin-and-mix story wearing the costume of a growth story.

Trigger	What management said	Evidence so far	Horizon	Strength
Specialty margin expansion	Specialty Chemicals to hold 25%-plus EBITDA margin and keep growing absolute profit through CDMO and fine chemicals.	Delivered and then some. FY26 segment EBITDA ₹510 cr (+21%) on revenue up 7%; margin 26–27% for six consecutive quarters; segment EBITDA roughly doubled in two years.	Now, ongoing	Strong Repeatedly promised, repeatedly delivered, visible in the numbers.
\$300m agro CDMO contract	Five-year contract with a global crop-protection innovator; plant to be built and supplies to start by Q4 FY26; "full protection" if volumes disappoint.	Plant built in 14 months and dispatching since March 2026 — on time. But the customer paused offtake in Q1 FY27 and has given no volume visibility. Management insists the EBITDA is contractually protected.	1–3 yrs	Moderate Execution flawless; demand outside their control.
CDMO / fine-chemicals pipeline	100-plus molecules in the funnel worth ₹3,500 cr at peak; 25 confirmed molecules worth ₹1,500 cr; confirmed molecules to become 25% of specialty-plus-nutrition sales.	Confirmed count has climbed 10 → 20 → 25 over three quarters, and pharma pipeline is 3x its size of two years ago. But the ₹1,500 cr peak figure has not moved despite five new molecules, and the advanced-stage bucket has been stuck at 10 for two quarters.	3–5 yrs	Moderate Real and growing, but peak revenue is an estimate, not an order book.
Nutrition premiumisation	Shift vitamin B3 from animal-feed grade to food, cosmetic and pharma grade; take segment margin from 12% to 18–20% and triple revenue by FY30.	Q1 FY27 margin 15%, the best in three years, and the cGMP plant is at 50% utilisation and climbing. But FY26 margin was still only 12.7%, and management warned B3 pricing typically falls after two to three strong quarters.	2–4 yrs	Moderate Moving the right way; still price-dependent.
Acetyls price rebound	Chemical Intermediates "saw a strong rebound"; expected to contribute ~₹100 cr of EBITDA for FY27.	Q1 EBITDA ₹57 cr, up 240%, driven by Middle East supply disruption lifting acetic-acid prices. Management's own full-year guide implies only ~₹43 cr across the remaining three quarters.	1–2 qtrs	Weak / not durable A commodity spike. Management is already guiding it away.
Cost programme	Structured "lean" savings every year; ₹100 cr targeted for FY27.	₹120 cr of savings delivered in FY26, ahead of plan. Net debt down 11%, net debt/EBITDA 0.99x, working capital cut to 59 days.	Ongoing	Strong Quietly delivered every year. Unglamorous but real.

4 Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q4 FY24 (May 24)	Pinnacle 345 : 3x revenue and 4x EBITDA in five years off the FY24 base — ₹10,000–12,000 cr sales and ~₹1,700 cr EBITDA by FY30.	Two years in: revenue ₹4,136 cr → ₹4,388 cr, up just 6% in total against the ~25% a year required. EBITDA ₹427 cr → ₹567 cr, up 33% — behind the ~32% a year needed, but the FY27 guide of ₹750–800 cr would put the profit leg back on trend.	Revenue leg: missed badly. EBITDA leg: recoverable.
Q4 FY24 (May 24)	₹2,000 cr modular capex programme to be deployed into specialty and nutrition.	Fully deployed by Q3 FY26, including the Bharuch CDMO plant. Capex now normalising to ₹400–	Delivered

500 cr a year. Roughly ₹1,800 cr of it went into specialty and nutrition as stated.

Q1 FY25 (Jul 24)	cGMP food- and cosmetic-grade niacinamide plant to be commissioned in Q3 FY25.	Commissioned in January 2025 — the start of Q4 FY25, one quarter late. Minor slip, promptly disclosed.	Partly
Q2 FY25 (Oct 24)	Two agro CDMO contracts won, including a \$300m five-year deal; plant to be built and supplies begun.	Built in a record 14 months against a normal 20–22, and dispatching from March 2026 exactly as guided in Feb 2026. Genuinely impressive execution.	Delivered
Q4 FY25 (May 25)	Specialty and Nutrition to grow 15–20% a year; group EBITDA to compound at 20%.	FY26 specialty revenue grew 7%, nutrition about 9%, group revenue 5%. Group EBITDA grew 9%, less than half the promise. The margin improved, but the growth rates were missed on every line.	Missed
Q2 FY26 (Oct 25)	Niacinamide plant to reach 60–70% utilisation "sometime next year"; 10-plus confirmed molecules worth ₹1,200 cr.	Nine months on the plant is at 50%, with 70% now targeted by March 2027 — roughly a year later than implied. Confirmed molecules, though, went to 25 and ₹1,500 cr: beaten on count.	Mixed
Q3 FY26 (Feb 26)	Agro innovator project to begin dispatching from March 2026; specialty margin to stay above 25%.	Both delivered precisely. Dispatches began in March; specialty margin has been 26–27% every quarter since.	Delivered
Q4 FY26 (May 26)	"At least 20% growth in EBITDA" for FY27 (~₹680 cr), with sequential improvement starting in Q1 FY27 itself. Raised to ₹750–800 cr at the June 2026 Bharuch investor day.	Q1 FY27 EBITDA ₹209 cr, up 36% year-on-year and 22% sequentially — ahead of both the original and the raised target's run-rate. The one clear beat in the record.	Beaten
Q1 FY27 (Jul 26)	FY27 EBITDA held at ₹750–800 cr with H1 above ₹400 cr; Gajraula multipurpose plant commissioning by December 2026; ₹100 cr of lean savings.	Nothing to judge yet. Notable that they refused to raise guidance after a 36% quarter.	Too early

Narrative drift. There are three quiet slippages, and they all run the same way. **First, the deadline moved.** Pinnacle 345 was announced in May 2024 as five years off the FY24 base, which is FY29 — and an analyst on the Jul 2024 call explicitly asked about "FY29". By Feb 2025 the Investor Day was talking about FY30, and in May 2026 an analyst framed it as "the next four years" with no correction from management. A year has been added without anyone acknowledging it. **Second, the bar was lowered.** "Four times EBITDA in five years" requires about 32% compound growth a year. By Feb 2026 that had been restated as "if you take a multiyear average, our EBITDA at least at 20% CAGR" — a materially easier target, offered as though it were the same one. **Third, the revenue leg has quietly stopped being discussed.** Management now leads every call with EBITDA growth, margin mix, and the share of profit coming from specialty and nutrition — all true, all flattering — while the ₹10,000–12,000 cr revenue goal, which would need sales to roughly triple in four years from a base that has grown 3% a year, goes unmentioned unless an analyst raises it.

Set against that is a real and unusual honesty on the near term. They volunteered that the big CDMO customer had paused shipments rather than burying it. They conceded pyridine pricing is under pressure from Chinese overcapacity. When an analyst pointed out that the advanced-stage molecule bucket had been static at ten for two quarters, they explained the churn underneath rather than deflecting. They declined to raise the ₹1,500 cr peak-revenue figure after adding five molecules, because they did not yet have visibility — the promotional move would have been to raise it. And they refused, twice, to lift full-year guidance after a 36% first quarter. **The pattern is clear: reliable and candid over one to four quarters, over-promising and slippery over five years.**

Durable earning trigger? → YES

The mix shift is real and it is showing up where it counts. Specialty Chemicals EBITDA has roughly doubled in two years to ₹510 cr, its margin has moved from 23% to 26–27% and held there for six consecutive quarters, and group operating margin has climbed from 10.3% in FY24 to 12.9% in FY26 on almost no revenue growth — which is the signature of genuine mix improvement rather than a cyclical bounce. Behind it sits ₹2,000 cr of capex already spent and only about half utilised, a five-year \$300m CDMO contract with contractual downside protection, 25 confirmed molecules with ₹1,500 cr of peak revenue attached, a pharma pipeline three times its size of two years ago, ₹120 cr a year of cost savings, and net debt at one times EBITDA. That is a funded, evidenced, multi-year engine, not a slogan. **Three things to hold against it.** This particular quarter is poor evidence for the thesis — three-quarters of the year-on-year EBITDA gain came from commodity acetyls, and specialty margin actually fell. Revenue growth is anaemic at 3% a year, so all the value has to come from margin, which has a ceiling. And at 35 times earnings, a good deal of the improvement is already in the share price. The trigger is durable; the entry price is not obviously attractive.

Management consistent? → MAYBE

Judge them on two clocks and you get two different answers. On the **short clock** — one to four quarters — they are among the more reliable management teams you will read: the Bharuch CDMO plant was built in 14 months against a 20–22 month norm, dispatches started in the exact month promised, the specialty margin target of 25%-plus has been met six quarters running, ₹120 cr of cost savings beat plan, the ₹2,000 cr capex programme was deployed as described, and Q1 FY27 came in ahead of a guidance they had already raised. They also disclose bad news unprompted and refuse to inflate their own pipeline numbers, which is rarer than it should be. On the **long clock** they are not consistent. Pinnacle 345 promised three times revenue by FY29; two years in, revenue is up 6% in total, the deadline has drifted to FY30 without acknowledgement, the "four times EBITDA" target has been quietly restated as "at least 20% a year", and the revenue leg has largely dropped out of the conversation. None of this is dishonest — the operational delivery is genuine and the disclosure is candid — but the headline five-year promise that anchors the equity story is not going to be met on revenue, and management has managed that fact rather than confronted it. Trust the quarterly guidance; discount the vision statement.

Sources: Thirteen Jubilant Ingrevia Ltd earnings-call and investor-meet transcripts filed with BSE/NSE, Q2 FY24 (Nov 2023) through Q1 FY27 (call held 23 Jul 2026, transcript filed 27 Jul 2026), sourced from Screener.in; Screener.in consolidated and standalone financial history (profit & loss, balance sheet, cash flow, ratios, quarterly results, shareholding).

A note on the numbers: figures quoted from the calls are *consolidated*, which is management's reporting basis — Q1 FY27 revenue ₹1,300 cr, EBITDA ₹209 cr, profit ₹106 cr. Screener's default quarterly table is *standalone* and shows ₹1,253 cr of revenue and ₹126 cr of profit for the same quarter. Both are correct on their own basis; the gap is the subsidiaries, including the recently acquired Remidex Pharma. Segment revenue and EBITDA figures throughout are as stated by management on the calls. Chemical Intermediates FY26 segment EBITDA was not separately disclosed and is therefore not shown.
