Corona Remedies Ltd

Concall-Tracker report | ticker CORONA | Q1-2027 update (continues the Q4-2026 report) | prepared 06 Nov 2026 | based on earnings-call transcripts (Screener.in)

1. Snapshot

What the company does: Corona Remedies makes finished medicines (tablets, capsules, injections, gels) and sells them under its own brand names, mainly to specialist doctors in India. Its four focus areas are women's health (including hormones and fertility), heart-and-diabetes, pain, and urology. About three-quarters of sales are long-term "chronic" medicines that patients keep refilling. It listed on the stock market in December 2025.

Number	Value	Plain-English read
Market value (Screener, Nov 2026)	₹14,917 cr	What the whole company is worth on the stock market today.
Price-to-earnings (P/E)	~68	Buyers pay about ₹68 for every ₹1 of yearly profit: an expensive price that assumes fast growth continues.
Q1 FY27 sales (Apr-Jun 2026)	₹422 cr, up 21.9%	Sales grew more than a fifth, well above the company's own 15% target and the market's ~11.6%.
Q1 FY27 operating profit (EBITDA)	₹93 cr, up 33.5%; margin 22%	Profit from core operations rose a third; about ₹22 earned per ₹100 of sales, up nearly 2 points.
Q1 FY27 net profit	₹60 cr, up 30.1%	Bottom-line profit grew well above the 20% guidance.
Return on capital (ROCE)	~33%	Earns about ₹33 a year on every ₹100 invested: very high.
Promoter holding (Jun 2026)	69%	The founding family owns more than two-thirds; unchanged since listing.

2. Concall coverage

Period	Call date	How it was used
Q2 FY26 → Q3 FY26 (2 calls)	5 Jan 2026, 3 Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior report's boundary)	12 May 2026	Carried forward from the Q4-2026 report
Q1 FY27	**3 Aug 2026**	**Newly deep-read in full ★**

Only the new Q1 FY27 call was read in full this quarter; the backstory comes from the Q4-2026 report. Corona now has four calls on record, so the track record is still short. Calls held after 30 Sep 2026 are outside this report's window.

★ Latest concall highlights: Q1 FY27 (call held 3 Aug 2026)

- **Fourth straight strong quarter.** Sales up 21.9%; India sales up 22.7% against a market growing 11.6%. Organic growth (excluding the newly bought Wokadine brand) was still 21.4%. *Growth is coming from its own brands, not from acquisitions, at about twice the market's pace.*
- **Growth comes from all three sources.** Over the year to June 2026, volume added 6.3% (market 1.3%), price 8.7% (market 5.6%) and new launches 3.4% (market 2.9%). Its industry rank rose from 29th to 26th. *It is selling more units and also has room to raise prices.*
- **Hormone plant is live.** The ₹130 cr Europe-approved women's-hormone factory started commercial operation on 30 Jun 2026, as promised. The Ahmedabad plant's European approval was also renewed. *A key promise from last quarter was kept on time.*

- **Guidance kept, not raised.** Still targets 15% organic sales growth (~17% including acquisitions) and 20% profit growth for FY27. Management warned that raw-material costs from geopolitical disruption could cut margins by ~1 point from Q2. *It is cautious on margins even after a strong quarter.*
- **Tone:** confident and specific, but slower on the newer bets. The IVF team is "too early" to judge, Wokadine sales dipped while its supply chain was being moved, and the semaglutide market estimate was trimmed.

Business mix & capacity (quick facts)

Domestic vs exports (Q1 FY27): India ~97% / international ~3%. Export sales did not grow this quarter. *This is almost purely an Indian business. Management says India will stay above 90% of sales for at least three to five years.*

Capacity: No utilisation figure given. The new hormone plant just started and will run at under one times its cost in sales during FY27, rising to two to three times over about three years. About 60% of products are made in-house and 40% outsourced, a split expected to hold through FY27. *There is plenty of new capacity to fill. Mostly Indian demand will fill it first; exports follow later.*

★ Since our last report

Builds on the **Q4-2026 report** (boundary call 12 May 2026). Prior verdicts: **Trigger YES · Consistency YES** (with a short-history caveat).

Prior read	What we said then	What the new call shows	Movement
Trigger: core branded engine outgrowing the market	FY26 sales +17%, adjusted profit +33%, beat guidance	Q1 sales +21.9%, profit +30%, margin up ~2 points; rank 29→26	**Confirmed**
Consistency	Every FY26 promise delivered on time	Guidance repeated word for word; hormone plant on schedule	**On-track**
Hormone plant live Q1/Q2 FY27	Nearing commissioning	Commercialised 30 Jun 2026	**Confirmed**
Wokadine brand +25% a year	Just acquired, unproven	Q1 sales appear lower year on year as supply chain was integrated; target restated (brand ₹20 cr → ₹40 cr over three years)	**Slipping (early)**
Bayer-Zydus / Noklot and IVF team	"Initial response very encouraging"	Noklot launched in heart/diabetes in June; portfolio earned back its ~₹7 cr purchase price in the quarter. IVF team "too early" to judge	**On-track**
Semaglutide (weight-loss drug)	Market could be ₹2,000-2,500 cr in year one	Now sees a ₹1,500-1,800 cr market, aims for top-10 position, says focus is on its other brands	**Toned down**
Exports via hormone plant	Revenue mainly FY28+	Dossiers ready Nov-Dec 2026, then 12-18 months registration; international kicks off "FY28-29"	**On-track, slightly later**

Verdict change this quarter: both verdicts **unchanged**. The core engine beat guidance again and the main hardware promise (the hormone plant) arrived on time. The add-on bets (Wokadine, semaglutide, exports) are softer or later than last quarter's language suggested.

★ 3. Earning-trigger thesis

The engine is a **disciplined branded-medicine business growing about twice as fast as the Indian drug market**. It wins share with specialist doctors in chronic areas, raises prices ahead of the market and keeps launching new products. Over two to three years, the ~400 sales reps added in late FY26 should start paying off, with no new reps hired in FY27, so costs should grow slower than sales. The new hormone plant adds a domestic, and later export, leg. Q1 FY27 shows the engine still running: sales +22%, profit +30%.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Core branded engine	15% organic sales / 20% profit growth for FY27; outgrow market by 5 points	Q1 sales +21.9%, profit +30%; volume growth five times the market	Ongoing	**Strong**	↑ beat guidance again
Costs growing slower than sales (new sales force maturing)	No new reps in FY27; costs should fall as a share of sales	EBITDA margin up ~2 points to 22%	1-3 years	**Moderate**	↑ first sign visible; raw-material risk
Hormone plant (Europe-approved)	Serves India first; exports FY28-29	Commercialised 30 Jun 2026	1-3 years	**Moderate**	↑ plant now running
Bayer-Zydus / Noklot + IVF	IVF team started April; more colour in two to three quarters	Noklot launched June; ~₹7 cr revenue from portfolio in Q1	1-3 years	**Moderate**	Unchanged
Semaglutide / biosimilars	Aim for top 10 in a ₹1,500-1,800 cr market	Launched; no revenue disclosed	2-4 years	**Unproven**	↓ market estimate cut, de-emphasised
Wokadine brand	+25% a year for three years	Q1 dip during supply-chain shift	2-3 years	**Unproven**	↓ slow start

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Jan-May 2026 (3 calls)	15% sales / 20% profit in FY26; Noklot launch; IVF team; biosimilars; net cash	All delivered, guidance beaten (from prior report)	**Delivered**
May 2026	FY27: 15% organic sales, 20%+ profit	Q1: 21.4% organic sales, 30% profit	**Ahead (one quarter)**
May 2026	Hormone plant live Q1/Q2 FY27	Commercialised 30 Jun 2026	**Delivered**
May 2026	Wokadine +25% a year	Q1 down while supply chain was integrated	**Too early / soft start**
May 2026	Semaglutide market ₹2,000-2,500 cr in year one	Estimate trimmed to ₹1,500-1,800 cr	**Toned down**
Aug 2026	Export dossiers by Nov-Dec 2026; margin hit of ~1 point possible	To be checked next quarter	**Too early**

Narrative drift: very little. The "15% sales / 20% profit" guidance is repeated word for word for a fourth call, and management refused to raise it despite beating it, saying a single quarter should not be annualised. The changes this quarter run toward caution, not hype: semaglutide is played down, export revenue is pushed toward FY28-29,

and margins come with a raw-material warning. That's a story getting more careful, which is fine. The caveat stands: four calls over about seven months is still a short record, and none has yet been a bad quarter.

5. Bottom line: two verdicts

> **Durable earning trigger? → YES** vs last quarter: unchanged

Q1 FY27 confirmed the verdict. Sales grew about twice as fast as the market, profit grew 30%, volume growth was five times the market's, and the new hormone plant is running. The base engine is real and visible in the numbers. The add-on bets (semaglutide, Wokadine, exports) are slower than hoped, but none of them is needed for the core case.

> **Management consistent? → YES** vs last quarter: unchanged

Nothing new weakens this verdict. Management again beat its own guidance without raising it, delivered the hormone plant on schedule, and was candid about soft spots: the Wokadine dip, the smaller semaglutide market and possible raw-material pressure. The record is still short, and the stock's P/E near 68 already prices in this consistency. The next checks are whether margins hold through the raw-material squeeze and whether Wokadine returns to growth.

Prepared from Corona Remedies' Q1 FY27 earnings-call transcript (3 Aug 2026, Screener.in), the Q4-2026 Concall Tracker report for backstory, and Screener financial snapshot files. Not investment advice.
