Borosil Renewables Ltd

Concall Tracker · Q2 FY2027 (quarter ended 30 Sep 2026) · NSE: BORORENEW · BSE: 502219 · Report prepared 6 Nov 2026

Not investment advice. Do your own due diligence. This follows on from our Q1-2027 report on Borosil Renewables and reads on its own, so you don't need the earlier one.

1. Snapshot

What the business does: Borosil Renewables makes the toughened glass that sits on the face of a solar panel. It's India's biggest maker of it and sells to the companies that assemble solar modules. Since late 2024 import duties on Chinese, Vietnamese and Malaysian glass have let it price close to what imported glass costs landed in India, and that's what turned it from a thin-margin business into a very profitable one. It also has a small new side line selling rooftop solar kits under the Borosil brand.

Measure	Value	What it means in plain words
Market cap	₹5,937 cr	What the whole company is worth on the market. Share ₹403, against a 52-week range of ₹369 to ₹721. It's fallen hard since our last report, when it was ₹581.
Price-to-earnings (P/E)	14.6	You pay about ₹15 for each ₹1 of the last year's profit. Down from about 20 last quarter, so the market has cooled on it.
Q2 FY27 sales (standalone)	₹396.2 cr	Includes ₹14.1 cr of rooftop kits. Glass alone was ₹382.1 cr, barely up on ₹378.4 cr a year ago and down from ₹405.7 cr in Apr-Jun.
Q2 EBITDA (operating profit before interest, tax, depreciation)	₹116.3 cr, 30.4% of glass sales	Down from 33.8% in Q1 and 33% a year ago. Still a fat margin, but the first real dip in a while.
Q2 net profit (consolidated, Screener)	₹70 cr	Up from ₹46 cr a year ago (when the German unit was still bleeding), down from ₹88 cr in Q1.
Return on capital (ROCE)	26.6%	About ₹27 of pre-tax profit a year on every ₹100 tied up. High, healthy return.
Expansion cost	~₹1,100 cr	Raised by ₹150 cr in September. Funded by ₹800 cr of own money and a ₹300 cr loan that hasn't been drawn yet.

2. Concall coverage

Period	Call date	Read?
Q1 FY24 → Q4 FY26 (12 calls)	Aug 2023 - May 2026	Carried forward from the Q1-2027 report
Q1 FY27 (boundary of last report)	17 Jul 2026	Carried forward from the Q1-2027 report
Q2 FY27	30 Oct 2026	**Newly deep-read in full ★**

Only the Q2 FY27 call was read in full this time. The backstory from Aug 2023 on comes from our earlier report, which read every call in that stretch.

★ Latest concall highlights - Q2 FY27 (call held 30 Oct 2026)

- **A soft quarter, with reasons given.** Glass sales ₹382.1 cr, flat on last year and down 6% on Q1. Two things hurt: furnace maintenance cut output by about 4.5% (management put the lost sales at about ₹15 cr), and the selling price slipped to ₹155.9 from ₹160.3 per mm per sq m because Borosil gave customers back part of its fuel surcharge in July when gas prices briefly eased. Read: a one-quarter wobble, not a demand problem.
- **Gas got dearer again, and so did raw materials.** The Middle East truce lasted about two weeks. Brent is now around $115, above where it was in Q1. Soda ash (about a third of the raw-material bill) went up about 10%, and freight on imported dolomite and limestone jumped. Borosil has gone back to customers to restore the full fuel surcharge from October. Read: this is the input-cost risk that matters, and Borosil has no automatic pass-through for anything except fuel.
- **Production is now at a record.** After the repair and fine-tuning, output since mid-September has been the highest in the company's history, about 8-10% above the old level. Management thinks it can make up the Q2 shortfall over the rest of the year, and expects margins back above 30%.
- **Expansion on time, cost up.** The two new furnaces (600 tonnes a day, +60% capacity) are set to fire in February and March 2027. The project cost went up ₹150 cr, mostly for fuel-saving kit and backup power, about a fifth from the weaker rupee. Still fully funded, no new shares.
- **New things on the table.** The old furnaces SG1 and SG2 need a 75-day rebuild each, likely in the first half of FY28. Management is also scouting a "next round of growth" with outside consultants and plans to decide before March 2027. Tone: confident, but the chairman was careful to call the make-up-the-loss promise "speculative".

Business mix & capacity

Domestic vs export: Almost all India. Exports were put at a small single-digit share last quarter, and nothing new was said on this call. Read: a pure play on Indian solar module making.
Capacity use: Existing furnaces run at full capacity (1,000 tonnes a day), output now above earlier levels after the repair. Capacity goes to 1,600 tonnes a day once SG4 and SG5 fire in Feb-Mar 2027. Read: no spare room today, so every rupee of growth from here comes from the new furnaces.
Demand gap: India has about 233 GW of module-making capacity and about 62 GW of yearly installations, while Indian glass makers can supply only about 18 GW worth. Read: there's plenty of room for the extra glass.

★ Since our last report

Builds on our Q1-2027 report (boundary call 17 Jul 2026). Prior verdicts: **trigger YES**, **management consistent YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger: duty-protected margins	Margins 33-35% for four straight quarters	Fell to 30.4% on a maintenance dip and a surcharge give-back. Duties unchanged to Dec 2029.	Slipping (one quarter)
600 TPD expansion by Mar 2027	On track, fully funded	Furnaces to fire Feb and Mar 2027. Cost up ₹150 cr, still funded internally.	On-track
Furnace rebuild downtime	75-90 days, likely FY28	Confirmed: 75 days each for SG1 and SG2 in H1 FY28. Management hopes rebuilt furnaces give more output.	Confirmed
Fuel surcharge winding down	Being cut as gas eased	Cut in July, then gas spiked again. Restored from October.	Reversed
Rooftop solar kits	Tiny, watch only	₹14.1 cr in Q2 from ₹1.3 cr in Q1. Low-margin trading, four states so far.	Improving (small)
Management consistent	Promised duties and margins, delivered	Upfront about the dip, owned the cost overrun, kept the expansion date	Confirmed

Verdict change this quarter: both unchanged. The trigger stays YES because the duty wall and the demand gap haven't moved, and the margin dip had a named, fixable cause. Consistency stays YES because the expansion date held and management disclosed the bad news before being asked. What I'd watch is whether Q3 really gets back above 30%.

★ 3. Earning-trigger thesis

The driver hasn't changed. Import duties, locked in until December 2029 for China and Vietnam, keep Indian solar-glass prices close to the cost of imports, while India's module makers need far more glass than domestic plants can supply. That gave Borosil margins in the low-to-mid thirties. The next leg is volume: a funded 60% capacity jump firing in Feb-Mar 2027, with full benefit in FY28 and, per management, a couple of points of extra margin from spreading overheads. This quarter showed the weak spot. Borosil sells at market price, so when gas, soda ash or freight rise, it can only push back through a fuel surcharge customers agree to. The margin dip came from that plus a maintenance stop, not from weaker demand.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Import duty protection	ADD on China/Vietnam to Dec 2029 keeps prices at import parity	Selling price ₹155.9 vs ₹147.5 a year ago. Margin 30.4%, still high.	To 2029-31	Strong	Unchanged
600 TPD expansion	Fire Feb and Mar 2027, sales up in line with capacity, 2-3 points extra margin	CWIP ₹349 cr (from ₹107 cr in March), building mostly done, machines arriving	FY28	Strong	Unchanged (cost up ₹150 cr)
Domestic demand gap	233 GW module capacity vs ~18 GW of local glass supply	"No challenge" selling extra output, new customers being lined up	Multi-year	Strong	Unchanged
Input-cost squeeze (risk)	Return to Q1 surcharge, swap imported dolomite for local, captive power	Margin down about 3 points in one quarter. Captive power saved ~₹10 cr in six months.	Near term	Risk	↓ worse this quarter

Rooftop kits / next project	Build slowly; next growth area decided by Mar 2027	Kits ₹14.1 cr at near-zero margin. No project named.	FY29+	Unproven	New, too early

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24	Government would bring back duty protection	Took longer than hoped, margins troughed near 6%	Too early, then on-track
FY25	Duties to lift prices and margins toward ~30%	BCD, then provisional and definitive anti-dumping duty. Margins recovered.	Delivered
FY26	~33% sustainable margin, expansion on schedule, German unit sorted	Margins hit 33%+. German unit written off. Expansion pulled forward.	Delivered
Capacity plan FY24-27	1,100 TPD, then on hold, then 500, then 600 TPD	600 TPD funded and building on time	Partly (sensible pivots)
Q1 FY27 (Jul 2026)	Margins hold above 33%, surcharge wound down, commission by Mar 2027	Margin 30.4% in Q2, surcharge restored after gas spiked, furnaces still dated Feb-Mar 2027	Partly
Q2 FY27 (Oct 2026)	Back above 30% in Q3, make up lost output, no further dilution, decide next project by Mar 2027	Pending	Too early

Narrative drift: Very little. The story is still duties, demand gap and the 600 TPD expansion, same as last quarter. What I liked: the chairman opened by explaining the weak volume and lower price himself, the CFO broke down the ₹150 cr cost increase item by item, and when an analyst tried to lock in "the loss will be made up next year" the chairman pushed back and called it speculative. What I'd flag: the margin they now talk about is "at least 30%", a step down from the 33% they were happy to quote a quarter ago, and there's a fresh "next round of growth" in the works with no shape yet. That's worth watching so it doesn't turn into another German-style detour.

5. Bottom line - two verdicts

Durable earning trigger? → YES (vs last quarter: unchanged)

Nothing that drives the business broke this quarter. The import duties are legally in place to the end of 2029, Indian module makers still need several times more glass than local plants make, and Borosil's own capacity goes up 60% in a few months with the money already in hand. What moved was the margin, from 33.8% to 30.4%, and management could explain every bit of it: a maintenance stop, a fuel surcharge it gave back too early, and dearer soda ash and freight. That's a reminder this is partly an input-cost business (gas especially), and with Brent near $115 the next couple of quarters could stay tight. But the volume step-up in FY28 is the bigger number, and it's on schedule.

Management consistent? → YES (vs last quarter: unchanged)

They kept the expansion date, kept it funded without new shares even after a ₹150 cr cost increase, and told investors about the bad quarter plainly before anyone asked. Their call to cut the fuel surcharge in July turned out wrong, but they reversed it quickly. The things keeping this from being a stronger yes are small: the margin they talk about has quietly slid from 33% to "at least 30%", and there's an unnamed new growth project coming that we can't judge yet. Given how they handled the German mistake, I'd give them the benefit of the doubt.
