Kingfa Science & Technology (India) Ltd

Concall-Tracker report | Ticker: KINGFA (NSE / BSE 524019) | Sector: Modified & engineering plastics

Quarter: Q1 2027 (Apr-Jun 2026) · NO-CONCALL web deep-dive path · Information used up to 30 Sep 2026 · Figures in ₹ crore unless stated

1. Snapshot

What the business does: Kingfa India is the Indian arm of China's Kingfa Sci. & Tech. It buys plain plastic granules and "compounds" them, mixing in glass fibre, colours and flame-retardants, to make tougher, made-to-order plastics. Car makers, appliance brands, and wire and electronics firms mould these into parts. It makes money selling this upgraded plastic by the tonne.

FY26 revenue (year to Mar 2026)	₹1,996 cr, up 14% - *total sales for the year, about a seventh higher than FY25.*
FY26 net profit	₹185 cr, up 21% - *profit grew faster than sales, so each rupee of sales kept a bit more.*
Q1 FY27 revenue	₹689 cr, up 49% on ₹462 cr a year ago - *the fastest growth in years, and well above the ₹578 cr record set in the March quarter.*
Q1 FY27 net profit	₹80 cr, about double the ₹40 cr a year ago - *the best quarter it has ever had.*
Q1 FY27 operating margin	~16%, up from ~13% - *out of every ₹100 of sales, about ₹16 was operating profit (before interest, tax, depreciation), a new high.*
Returns on capital (FY26)	ROCE 23%, ROE 17% - *it earns about ₹23 on every ₹100 tied up in the business; healthy, though diluted by the ₹500 cr of fresh cash sitting partly unspent.*
Debt	~₹15 cr - *next to nothing; interest isn't eating profit.*
Promoter holding	67% (Jun 2026) - *the Chinese parent still owns two-thirds; it fell from 75% when new shares were issued in Sep 2025.*

2. Concall coverage

> **No concall transcripts were available on Screener - this report is based on a global web deep-dive.** Kingfa India doesn't hold earnings calls. The backstory (FY24-FY26) is carried forward from our Q4-2026 report; this quarter we read the June-quarter result and the June-quarter monitoring agency filing in full.

Period	Source	Read?
FY24 → Q4 FY26	AGM record, results, filings, media	Carried forward from Q4-2026 report
Q4 FY26 (results 29 May 2026)	Results, MarketsMojo / ScanX coverage	Prior boundary
Q1 FY27 (results 14 Aug 2026)	Exchange results filing (via Univest / Multibagg summaries), Screener quarterly table	Newly read in full ★
Q1 FY27 (14 Aug 2026)	CARE Ratings monitoring agency report on the ₹500 cr issue, quarter to 30 Jun 2026 (NSE filing)	Newly read in full ★

Sources: Screener.in (KINGFA); NSE filing KINGFA_14082026_Final_MA.pdf; Univest and Multibagg Q1 FY27 result write-ups; Whalesbook summary of the March-quarter monitoring report. The press summaries disagree on some details, so figures here are checked against Screener's quarterly table.

Latest update highlights - Q1 FY27 (results filed 14 Aug 2026)

- **Sales jumped.** ₹689 cr, up 49% on last year - *roughly half again as much plastic sold as a year ago. The new Bhiwadi plant, switched on in Feb 2026, had its first full quarter.*
- **Profit doubled.** ₹80 cr against ₹40 cr - *profit grew about twice as fast as sales.*
- **Record margin.** Operating margin ~16% vs ~13% a year ago - *the extra volume spread fixed costs thinner, and it kept more of each sale.*
- **Expansion spending stalled.** Only ₹7.9 cr of the ₹500 cr issue was spent in the quarter - *the Chakan Phase 2 building hasn't started (plan approval still pending with MIDC, the state industrial body) and the South India land deal is still being discussed.*
- **Tone:** no management commentary was published with the result; the filings simply report the numbers and "no deviation" on fund use.

Business mix & capacity

Domestic vs export (Q1 FY27): Domestic ~92% / Exports ~8% - *it's almost entirely an India story; exports grew but are still small.*
Capacity: India's largest compounder, over 110,000 tonnes a year across Manesar, Chakan, Puducherry and Bhiwadi. **Utilization:** not disclosed. *The sales jump suggests Bhiwadi is filling up; the next block of room (Chakan Phase 2) is still at the approval stage.*

Since our last report ★ (builds on the Q4-2026 report, results of 29 May 2026)

Prior verdicts: **Trigger YES · Consistency YES**.

Prior read	What we said then	What the new quarter shows	Movement
Trigger	Funded expansion + domestic demand, already in the numbers	Sales +49%, profit doubled, record margin	**Confirmed**
Consistency	Clean promise-vs-delivery record	Results delivered; fund use shows no deviation	**On-track**
Bhiwadi ramp	Just switched on (Feb 2026)	First full quarter, sales stepped up sharply	**Improving**
₹500 cr spend by Jun 2027	₹156 cr spent, "on track"	Only ₹7.9 cr more in Q1; Chakan building ₹0 spent; land not bought	**Slipping**
Margin rising	14% in Q4 FY26	~16% in Q1 FY27	**Improving**

Verdict change: both unchanged. The quarter's numbers made the trigger stronger, not weaker. The one thing to watch is that the next round of building has gone quiet, which matters for growth in FY28 more than this year.

3. Earning Trigger thesis

The trigger: new capacity filling up into steady Indian demand

Kingfa's driver is simple: add plants and sell the extra output to Indian car, appliance and electronics makers who keep buying more engineered plastic. It raised ₹500 cr in Sep 2025 to pay for this, and the Bhiwadi plant that came on in Feb 2026 is showing up right away. The June quarter was its best ever by a wide margin. The weaker spot is the next leg: the Chakan Phase 2 factory and the South India site haven't moved, so growth after Bhiwadi fills up depends on approvals the company hasn't cleared yet.

Trigger	What the record says	Evidence so far	Horizon	Strength

					Change since last report
Bhiwadi plant ramp	Commercial production from 22 Feb 2026	Q1 FY27 sales +49% in its first full quarter	Now → FY27	**Strong**	↑ improving: it's already in the numbers
Domestic demand	Autos, appliances, electricals, electronics	Every quarter since Dec 2023 grew on the year before; domestic sales ~92% of total	Ongoing	**Strong**	unchanged
Margin lift	Better mix plus scale	OPM 12% (FY24) → 13% (FY26) → ~16% (Q1 FY27)	Now	**Strong**	↑ improving
Chakan Phase 2 + South India	₹187 cr building, ₹44 cr R&D office, ₹42 cr land; funds used by Jun 2027	₹0 on the Chakan factory; ₹0.13 cr on the office; land still under talks	FY28+	**Moderate**	↓ weakening: no progress this quarter
EV / green materials	Flame-retardant EV battery plastics, recycled grades	Still no separate revenue disclosed	Medium term	**Unproven**	unchanged

4. Management Consistency scorecard

Period	What was said / planned	What actually happened	Verdict
FY24 → FY25	Grow volume and profit, lift margins	FY25 sales +17%, profit +25%, margin ~13%	**Delivered**
FY25 capex plan	Raise ₹500 cr; Bhiwadi, Chakan Phase 2, South India	₹500 cr raised Sep 2025; Bhiwadi live Feb 2026	**Delivered**
FY26	Keep growth plus margin going	Sales +14%, profit +21%, Q4 margin 14%	**Delivered**
Q1 FY27	Ramp Bhiwadi	Sales +49%, profit doubled, margin ~16%	**Delivered**
Chakan / South India by Jun 2027	Build Phase 2 and buy southern land with issue money	~₹164 cr of ₹500 cr used by Jun 2026; Chakan building and land not started	**Too early / at risk**
Balance sheet	Stay nearly debt-free	Borrowings ~₹15 cr	**Delivered**

Narrative drift: none. It's the same story it's told for three years: biggest compounder in India, add capacity with equity money, sell into local demand, lift margins. The numbers keep backing it. The caveat hasn't changed either: no concalls, so there's no detailed guidance to hold them to, only results and filings. The slow start on Chakan isn't a broken promise yet since the deadline is Jun 2027, but with a year to go and most of the building money untouched, it's the thing to check next quarter.

5. Bottom line

Durable earning trigger? → YES (vs last quarter: unchanged)

The June quarter made this stronger. The Bhiwadi plant went from "just started" to driving a near-50% jump in sales and a doubling of profit at a record margin, all in its first full quarter. Demand at home is clearly there. What keeps this from being a lock for FY28 is that the next expansion hasn't broken ground, so once Bhiwadi is full the growth rate will slow unless Chakan moves.

Management consistent? → YES (vs last quarter: unchanged)

Nothing moved against them this quarter. They said they'd ramp the new plant and grow profit, and they did, with the monitoring agency again finding no misuse of the issue money. The honest knock is the pace of spending on Chakan and the southern land, which has nearly stopped. That's a watch item, not a miss, until the Jun 2027 deadline gets close.
