SPR Auto Technologies Ltd

Concall Tracker · Q2 2027 · first report

1. Snapshot

Formerly Shriram Pistons & Rings. India's leading maker of pistons, piston rings, pins and engine valves for carmakers, two-wheeler makers, the aftermarket and exports, now also making precision plastic parts, EV motors and controllers, and car interiors and lighting (the former Antolin India businesses).

Number	Value	What it means
Market cap	₹20,020 cr	What the whole company is worth on the stock market.
Stock P/E	40	Investors pay about forty years of current profit; not cheap for an auto-parts maker.
FY26 consolidated income / EBITDA	₹4,571 cr / ₹989 cr	Last year's sales up a quarter and operating profit up about a fifth, a record year.
Q2 FY27 consolidated income	₹1,675 cr, up 61%	Big jump mostly from adding the Antolin interiors businesses; the old standalone business grew 17%.
Q2 FY27 consolidated EBITDA	₹300 cr, up 29%	Operating profit grew far slower than sales, so margins fell to about 18% from about 22%.
ROCE / ROE	20% / 20%	Earns good returns on the money in the business.
QIP	₹1,000 cr raised Aug 2026	New shares sold to institutions; used to close most of the Antolin acquisition debt.

2. Concall coverage

Quarter	Date	Transcript read?
Q4 FY24	16 May 2024	Yes
Q1 FY25	29 Jul 2024	Yes
Q2 FY25	28 Oct 2024	Yes
TGPEL deal call	18 Dec 2024	Yes
Q3 FY25	3 Feb 2025	Yes
Q4 FY25	8 May 2025	Yes
Q1 FY26	4 Aug 2025	Yes
Q2 FY26	7 Nov 2025	Yes
Q3 FY26	3 Feb 2026	Yes
Q4 FY26	12 May 2026	Yes
Q1 FY27	5 Aug 2026	Yes
Q2 FY27	2 Nov 2026	Yes, read in full (from NSE filing)

Twelve calls over about two and a half years. The Q2 FY27 transcript was not on Screener yet and was taken from the NSE filing of 6 Nov 2026.

Latest concall highlights: Q2 FY27 (2 Nov 2026)

- Consolidated income up 61% and EBITDA up 29%; the standalone piston business grew 17%, roughly in line with industry production.
- Margin slipped to 17.9% on costlier metals, tools and oils, a mix shift toward carmakers away from aftermarket and exports, and higher minimum wages. Management says metal costs are passed on with a lag of about a quarter.
- Interest on the Antolin acquisition loan cost ₹23 cr extra this quarter; the ₹1,000 cr QIP closed most of that debt, so interest should fall from next quarter.

- New wins across all businesses worth over ₹1,000 cr a year at maturity, on top of about ₹6,000 cr of regular business.
- A new Neemrana plant for two-wheeler ABS plastic parts, a new safety rule, starts supplying by April. Management expects piston growth to cool to 7-8% a year over the next two years.

Business mix & capacity

Domestic vs export: Domestic vs export split not given in this call; earlier years showed exports at roughly a fifth of standalone sales (FY24).

Capacity use: Running at about 75-80% utilisation before the demand jump; capacity being added at Pithampur, Pathredi, Ghaziabad, Neemrana, TGPEL and the interiors plants.

3. Earning Trigger thesis

The trigger is the move from a four-product piston company to a multi-product auto-parts group less exposed to electric cars. Acquisitions (EV motors, TGPEL plastics, Antolin interiors and lighting) now make over a third of sales powertrain-agnostic, and they're the reason consolidated sales jumped by more than half. The old piston business keeps outgrowing the auto market. The catch is margins: the new businesses earn less than pistons, and metal costs have squeezed the last two quarters.

Trigger	What management said	Evidence so far	Time horizon	Strength
Antolin interiors and lighting	Strong operational performance, margins improved from 7-8%	Lifted Q2 sales 61%; new customer wins, POC on speaker-less headliner	Now	Strong for sales, moderate for margin
Precision plastics (TGPEL, Neemrana)	ABS parts for two-wheelers from April	Orders won, plant being built	From Apr 2027	Moderate
EV motors and controllers (EMFI)	Exceeding targets, revenue doubled last year	Coimbatore plant running	Now	Moderate
Legacy pistons and valves	Outgrow the auto market	Standalone up 17% in Q2, record FY26	Ongoing, cooling to 7-8%	Steady
Debt repayment after QIP	Finance cost temporary, normalises on repayment	Most debt closed after Aug QIP	Q3 FY27	Strong, should show next quarter

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	Most of the Antolin acquisition debt has been closed using the QIP money (2 Nov 2026).
New business	Yes	Automotive interiors and lighting via the three Antolin India entities, completed Q3 FY26; EV motors via SPR EMFI.
Margin up	No	Margins fell to 17.9%; management calls it timing and mix.
New management	No	No change in CEO or CFO; new company secretary only.
New capacity	Yes	New Neemrana precision-plastics plant to supply ABS parts by April 2027; expansions at Pithampur, Pathredi, Ghaziabad (Nov 2026).
Big orders	Yes	New program wins over ₹1,000 cr a year at maturity across all businesses (Nov 2026).
Turnaround	No	Not applicable; the Antolin margin fix is ongoing integration, not a loss-to-profit turn.
Promoter buying	No	Not mentioned; the QIP sold new shares to institutions.

The single concrete driver: The Antolin interiors and lighting buy, plus plastics and EV motor arms, has turned a piston maker into a wider auto-parts group, lifting sales by more than half.

3c. Margin bridge

Consolidated EBITDA margin fell to about 18% from about 22% a year ago. Reasons given: the lower-margin Antolin business now in the mix, costlier aluminium, tools and oils, more sales to carmakers instead of aftermarket and exports, and higher minimum wages. Management says commodity costs are passed on with a quarter's lag, but the mix effect stays as long as Antolin is a bigger share (partly one-off, partly lasting).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24-FY25	Keep outgrowing the auto market	Grew roughly double the industry in FY24 and FY25, record FY26	Delivered
May 2024	Build EV-motor plant in Coimbatore	Plant running, business doubling	Delivered
Dec 2024	Close TGPEL plastics deal	Closed in Q3 FY25, capacity being added	Delivered
FY26	Complete Antolin India acquisition and lift its margins	Completed Q3 FY26; margins improved from 7-8%	Delivered
Aug 2026	Commodity hit recovered next quarter	Q2 margin fell further, to 17.9%	Missed
Aug 2026	High finance cost is temporary	QIP done, most debt closed; to show from Q3	Too-early

Narrative drift: The story has been steady for over two years: reduce dependence on engines through acquisitions and keep outgrowing the market. Management delivers on deals and growth. It is evasive on capex, segment numbers and order details, and the margin explanation has shifted from 'next quarter' to 'complex mix and timing'.

5. Bottom line

Durable earning trigger? → YES

The acquisitions are real, closed and already in the numbers, and the core piston business keeps growing with the auto cycle. Interest cost should drop now that the QIP has paid off most of the debt, giving profit a lift even if margins stay where they are.

Management consistent? → YES

A long record of doing what it says on growth and deals. The one miss is margins: the commodity recovery promised last quarter didn't show, and management won't break out segment numbers, which makes it harder to check.

6. Checkpoints for next quarter

- Interest cost falls sharply now that the acquisition debt is repaid
- Consolidated operating margin stops falling and recovers toward last year
- Neemrana ABS parts plant on track to supply from April
