Savita Oil Technologies Ltd

Concall Tracker, Q2-2027 update · builds on the Q1-2027 report · new source read: Q2 FY27 earnings release (5 Nov 2026) and results filing (3 Nov 2026) · Report date 6 Nov 2026 · BSE 524667 / NSE SOTL

What the business does: Savita buys base oil (a refined petroleum feedstock) and turns it into specialty fluids: transformer oil that cools and insulates electricity transformers, white and mineral oils for cosmetics, pharma and plastics, cable-filling compounds, and its own SAVSOL brand of car, bike and industrial lubricants. It's debt-free and also owns about 54 MW of wind power.

1. Snapshot

Figure	Value	What it means
Q2 FY27 total income (Jul-Sep 2026)	Rs 1,714 cr vs Rs 1,090 cr	Another record quarter, up 57% on a year ago and above the June quarter's Rs 1,513 cr. A lot of it is higher selling prices, since feedstock costs went up.
Q2 FY27 operating profit (EBITDA)	Rs 296 cr, margin 17.3%	Down from Rs 397 cr and 26% in Q1, but still about three times the normal 5-7 rupees per 100 of sales. The oil-price windfall is shrinking, not gone.
Q2 FY27 net profit (standalone)	Rs 216 cr vs Rs 44 cr	About five times last year's quarter, and lower than Q1's Rs 292 cr.
H1 FY27 operating profit	Rs 693 cr	Six months of operating profit already more than double the whole of FY26 (Rs 291 cr). FY26 was a normal year, which shows how unusual this one is.
Market value / P/E (Screener, Nov 2026)	Rs 4,644 cr · ~7.8x	Looks very cheap, but trailing profit is stuffed with windfall quarters. On a normal year's profit it's nearer the ~19x of earlier reports.
Balance sheet (Sep 2026)	Borrowings ~Rs 1 cr · reserves Rs 2,301 cr	Effectively no debt. Reserves jumped by about Rs 470 cr in six months as the windfall was kept in the business.

2. Coverage: what was read

Savita Oil does not hold earnings concalls. No concall transcripts were available on Screener, so this report is based on a global web deep-dive, led by the company's own quarterly earnings release, which carries a signed comment from the Chairman & MD.

Source	Period	Read?
17 quarterly decks, Q1 FY23 → Q4 FY26	Aug 2022 - May 2026	Carried forward from earlier reports
Q1 FY27 investor presentation (prior boundary)	Filed Sep 2026	Read in the Q1-2027 report
Q2 FY27 earnings release	5 Nov 2026 (NSE filing)	**Newly read in full ★**
Q2 FY27 results filing (board outcome) and press coverage	3 Nov 2026	Cross-check of standalone profit and segment revenue
Screener quarterly results, balance sheet, shareholding	To Sep 2026	Cross-check

No Q2 investor deck had been filed by report date, so domestic/export split and product mix are carried from the last one that gave them.

★ Latest update highlights: Q2 FY27 (earnings release, 5 Nov 2026)

- **Record sales, smaller windfall.** Income up 57% to Rs 1,714 cr. Operating margin fell to 17.3% from Q1's 26%. Plain read: the extra profit from oil prices is fading quarter by quarter, as we expected, but hasn't fully gone yet.
- **Volumes grew across the board.** Transformer oil, white oil and export volumes all grew double digits over the June quarter, and lubricants grew double digits for the half year. Plain read: this isn't only price. More product is moving, and that's the part that can last.
- **First capacity plan in years.** The company plans to add 50% more lubricant capacity and double its Diesel Exhaust Fluid capacity (the urea liquid trucks need for cleaner exhaust). No cost or date given yet.
- **New products, still no numbers.** Ester5 lubricants still growing at four times the industry. Ester fluids for refrigeration compressors are winning approvals from old and new OEMs (equipment makers). Battery immersion coolants for EVs and storage: "tremendous potential", but no revenue disclosed.
- **Tone: cautiously optimistic.** Feedstock prices are still swinging daily and supply was tighter. Unlike Q1, the release doesn't spell out how much of the profit came from cheap stock sold dear.

Business mix & capacity

Domestic vs exports: About 83% domestic and 17% exports (FY26, the latest split given). Exports grew double digits in H1, so that share is probably a bit higher now. *Plain read: still mostly an India business.*
Product mix: Petroleum specialty oils about 73% of sales, lubricants about 26% (FY26). Nearly all Q2 revenue (Rs 1,696 cr) sits in the single "petroleum products" segment.
Capacity: Utilisation not disclosed. The new plan to lift lubricant capacity by half suggests that line is getting full. *Plain read: management is spending on the part of the business with the better margins.*

★ Since our last report

Builds on the Q1-2027 report (Q1 FY27 investor presentation, Sep 2026). Prior verdicts: **Trigger MAYBE**, **Consistency MAYBE (leaning yes)**.

Prior read	What we said then	What's new	Movement
Trigger: power-infra demand + premium lubricants	Volumes real, but the record quarter was an oil-price windfall	Margin down to 17% from 26%, volumes up double digits in every main line	Confirmed (windfall fading, volume real)
Consistency	Steady, candid story; slow on new products	Same story, plus a concrete capacity plan. Less candid on inventory gains this time	Unchanged
"Margins slide back once oil settles"	Main watch point	Slid from 26% to 17%, still far above normal	On-track (as expected)
Ester / data-centre / EV / storage fluids	OEM approvals, no revenue	More approvals (now refrigeration compressors too); still no revenue figure	Unchanged
"Continued investments in capacity"	Vague, no number	Now specific: +50% lubricants, 2x DEF. Still no cost or date	Improving

Verdict change: both unchanged. Volumes growing in every line plus a real capacity plan nudge the trigger up a little, but profit is still mostly following oil prices and the new fluids still have no revenue to show.

★ 3. Earning-trigger thesis

Same story as before. India's grid build-out needs transformer oil, SAVSOL is moving up-market with Ester5, and ester-based specialty fluids could open new markets in cooling and storage. What's better this quarter is the evidence on volume: every main product line grew, and management is now putting money behind lubricants with a capacity plan. What hasn't changed is that the giant profits of the last two quarters came mostly from oil prices and tight supply. Once those calm down, margins should drift back toward the old 5-7% band, plus whatever the premium mix adds.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
Transformer oil / power-infra demand	Grid build-out drives demand	Double-digit volume growth over Q1	Ongoing	Moderate	↑ volumes up
Premium lubricants (Ester5)	Grow faster than the category	Four times industry growth; capacity +50% planned	Now to 2 yrs	Moderate	↑ capex backs it
Exports	Demand to stay buoyant	Double-digit volume growth in Q2 and H1	Near term	Moderate	Unchanged
Diesel Exhaust Fluid	Double capacity	Plan only; no sales figure	1-2 yrs	Unproven	New
Ester fluids for compressors, EV, BESS	"Tremendous potential", large volumes	More OEM approvals; no revenue after three years	3-5 yrs	Unproven	Unchanged
Oil-price windfall	Feedstock and product prices rose	Margin 26% in Q1, 17% in Q2	Fading	Not durable	↓ shrinking

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY23	Ester plant in Q2 FY24	Commissioned on time (Aug 2023)	Delivered
FY24-FY25	Margins to "normalise"	Profit fell two years running, bottomed in FY25	Missed
FY26	Double-digit growth, premiumise	Record revenue and volume, profit up 60%	Delivered
Q1 FY27	Exports to stay strong	Export volumes up double digits again in Q2 and H1	Delivered
Q1 FY27	Ester5 to keep beating the market	Still four times industry growth	Delivered
FY24 → Q2 FY27	Data-centre, EV, storage and compressor fluids to add big volumes	Approvals keep coming; still no revenue shown	Too early
Q2 FY27 (new)	+50% lubricant capacity, 2x DEF	Just announced, no cost or timeline	Too early

Narrative drift: very little. The Chairman's comment reads like the last dozen: esters, premium lubricants, new-age fluids. The near-term promises (exports, Ester5) keep landing. One small slip in candour: in Q1 they said plainly that inventory gains helped, and this time the release talks only about higher feedstock costs and prices, while margin is still three times normal. And the flashiest products have been "about to take off" since 2023 without a single revenue number.

5. Bottom line

Durable earning trigger? → MAYBE

vs last quarter: unchanged

Slightly firmer than last time. Volumes grew in every main line and management is finally committing to new capacity in lubricants, the higher-margin side. But the profit jump still comes mostly from oil prices and tight supply, and that's already fading. Until margins hold well above the old band without a price spike, or the ester fluids show real revenue, it stays a Maybe.

Management consistent? → MAYBE (leaning yes)

vs last quarter: unchanged

Nothing moved it. The near-term things they say keep happening, the story is the same every quarter, and the balance sheet is clean. Held back by the long wait for the new-product revenue and a slightly less open account of this quarter's windfall. No concall means no analyst Q&A to test any of it.

Watch: Q3 margin as oil settles, cost and timing of the lubricant and DEF expansion, and the first revenue number from the ester range.

Sources: Savita Oil Technologies Q2 FY27 earnings release (NSE filing, 5 Nov 2026); Q2 FY27 results / board outcome (NSE, 3 Nov 2026) as reported by press; prior Q1-2027 Concall Tracker report covering the Q1 FY27 deck and earlier decks; Screener.in quarterly results, balance sheet and shareholding. No earnings concall transcripts exist. "cr" = crore. EBITDA = operating profit before interest, tax and depreciation. DEF = Diesel Exhaust Fluid. BESS = battery energy storage system. OEM = equipment maker. This is not investment advice. Do your own due diligence.
