Gland Pharma Ltd

Concall Tracker, Q1 2027 · NSE: GLAND · written 6 Nov 2026 · builds on our Q4-2026 report · source: company concall transcripts via Screener.in

> **Plain-word key. Injectables**: medicines given by injection or drip. **CDMO**: a factory-for-hire that makes drugs for other pharma companies. **B2B**: Gland's own products sold through partner companies. **Cenexi**: the French contract-manufacturing group Gland bought in 2023. **GLP-1**: the weight-loss and diabetes drug family (semaglutide, tirzepatide). **EBITDA**: operating profit before interest, tax and depreciation. **ANDA**: a US generic-drug approval filing. **Constant currency**: growth with the rupee's movement stripped out.

1. Snapshot

Gland makes sterile injectable medicines in Hyderabad and Europe and sells almost all of them abroad, either as its own products through partners or as a factory-for-hire for big pharma. The factory-for-hire side is now half the business and it's the bit management is betting on.

Number	Value	What it means
Market value	₹52,262 cr	What the stock market says the whole company is worth today (share price ₹3,169, near its one-year high).
Price to earnings	37	You pay about 37 years of current profit for the share. Not cheap, so the market already expects growth.
Q1 FY27 sales	₹1,800 cr	Sales for Apr-Jun 2026, up 20% on last year. Take away the weaker rupee and it's 15%.
Q1 FY27 profit after tax	₹317 cr	Up 47% on last year. Lower than the March quarter only because a currency gain then turned into a small loss now.
Adjusted operating margin	28%	For every ₹100 of sales, ₹28 is operating profit. Up from 25% a year ago.
Net cash	₹3,294 cr	Cash minus borrowings. Lots of room to pay for the expansion plan without debt.

Market value and P/E from Screener.in today. Quarter figures from management on the Q1 FY27 call (consolidated).

2. Which calls were read

Quarter	Call date	How it was used
Q1 FY24 to Q3 FY26 (11 calls)	Aug 2023 to Jan 2026	Carried forward from our Q4-2026 report
Q4 FY26	May 2026	The prior report's last call (its coverage boundary)
Q1 FY27	**10 Aug 2026**	**Newly read in full ★**

Only the August call was read in full this time. The backstory comes from the earlier report, which read all 12 calls before it.

★ Latest concall highlights: Q1 FY27 (10 Aug 2026)

- **Strong start.** Sales ₹1,800 cr, up 20% (15% in constant currency). Adjusted EBITDA ₹510 cr at a 28% margin. Profit up 47%. The US grew 32% on the back of new launches like a multivitamin injection and dalbavancin. The Middle East was flat because of supply trouble in Saudi Arabia and a delayed government tender.
- **A big new factory-for-hire deal.** A global specialty pharma company will move 55 injectable products to Gland's Indian plants. Management puts peak sales at $90-100 million a year, roughly an eighth of today's sales, but money only starts in calendar 2029 after a two-year transfer.
- **Growth target raised.** They used to talk of 15% a year for the next four to five years. Now it's "around 20%" for four years, with a firmer number promised next quarter. FY27 itself stays at 15% in constant currency, with upside if a new IV-bag line gets US approval.
- **More long-dated bets.** A new GLP-1 contract (semaglutide and tirzepatide for the US and EU), a sterile-ingredient tie-up with Neuland Labs, and a liposome drug licensed in from a Chinese developer. Most of these pay from FY29-FY30, not now.
- **Tone:** confident, a bit vague in places. A couple of analyst questions (launch pipeline size, constant-currency maths) got "we'll come back to you".

Business mix & capacity

India vs abroad: India was only ₹67 cr of ₹1,800 cr this quarter, about 4%. The US is over half of sales and Europe about a quarter. Plain read: this is an export business, so US pricing and FDA news matter most.

Split by model: factory-for-hire (CDMO) 50%, own products via partners (B2B) 50%. Management expects about 50-50 for two years, with CDMO pulling ahead from 2029.

Capacity: no overall utilisation figure was given. Management said utilisation is improving, the IV-bag and eye-drop lines are tight, and the sterile-ingredient suite is full. That's why they're spending ₹550 cr this year out of a ₹2,000 cr expansion plan.

★ Since our last report

Builds on the Q4-2026 report (last call May 2026). Prior verdicts: trigger **YES**, management **MAYBE**.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	US launches plus a factory-for-hire arm that just turned profitable	US up 32%, CDMO up 20%, a large multi-year contract signed	Confirmed
Management: MAYBE	Reliable on the base business, late on Cenexi	Base business beat again. Cenexi still flat on sales.	On-track
Cenexi margins to double digits	Kept getting pushed out	Still about 4%. Now promised "by the end of the year".	Slipping
Cenexi sales near EUR 200m in FY27	Well behind old targets	EUR 48m this quarter, flat on last year. Guide kept; heat-wave hit blamed.	Slipping
GLP-1 upside	Kept out of guidance, volumes FY29-30	New contract signed. Big US volumes now FY30-31.	On-track (still far off)

Verdict change: both unchanged. The trigger got stronger. The Cenexi gap is still there, so management stays at MAYBE.

3. The earnings trigger

> Gland's pitch is simple. Western drug companies are paying too much to make injectables in Europe and the US, and Gland can make them cheaper with a clean quality record. On top of that, it keeps launching its own US products. This quarter both halves grew about a fifth, and the new 55-product deal shows big pharma is actually signing. The catch: the next big leg of growth (the new deal, GLP-1, complex products) mostly arrives after 2029.

Driver	What management said	Evidence so far	Horizon	Strength	Change since last report
US injectable launches	Keep launching complex products, grow faster than the market	4 launches, 7 approvals this quarter; US sales up 32%	Now	Strong	↑ faster than last year
CDMO for big pharma	Be the one-stop, low-cost site for products made in Europe/US	CDMO up 20%; 55-product deal worth $90-100m at peak	Now, bigger from 2029	Strong	↑ big new contract
Cenexi turnaround	Double-digit EBITDA by year end; ~EUR 200m sales	Flat sales, ~4% margin	FY27	Weak	unchanged, still lagging
GLP-1 fill-finish	Upside, not in guidance	New sema/tirzepatide contract; exhibit batches only	FY30-31	Moderate	unchanged
Complex and new delivery tech (depots, liposomes)	Next growth driver after FY29	Deals signed, nothing commercial yet	FY29-30	Unproven	new this quarter

4. Has management been consistent?

Period	What was promised	What actually happened	Verdict
FY24-FY26 (carried forward)	Base-business margins held around 30%+	Held and rose; the most reliably kept promise	Delivered
FY24-FY26 (carried forward)	Cenexi to break even in 12-15 months	Got there about a year late	Delivered (late)
FY25 Q4	FY26 growth around 15%	FY26 sales grew 14.5%	Delivered
FY26 Q4	FY27 growth 15% in constant currency	Q1 came in at exactly 15% constant currency	On-track
FY25 onward	Cenexi to double-digit margins in FY27	Still ~4% in Q1 FY27	Too early, leaning late
FY24 Q1	China via Fosun as a growth leg	Faded out long ago	Dropped

Has the story drifted? Not really. It's widened. The core (US launches, tight margins, more CDMO) is the same one they told three years ago, and it keeps showing up in the numbers. What's changed is the time horizon: each call adds a new long-dated deal that pays in 2029 or 2030. That's fine as long as today's business keeps growing, but it does make the story harder to check quarter to quarter. Cenexi is still the weak spot, and "by the end of the year" is the third or fourth date we've heard for those margins.

5. Bottom line

Durable earning trigger? → YES vs last quarter: unchanged

Nothing knocked it down and the new deal adds to it. US sales up a third and CDMO up a fifth in one quarter is the driver showing up in plain sight, and the 55-product contract gives visibility well past FY29. The risk is mostly time: a lot of the shiny stuff pays later, and the stock already prices in a good chunk of it.

Management consistent? → MAYBE vs last quarter: unchanged

They hit the FY27 run-rate they guided and the base business keeps beating. But Cenexi sales are flat and its margin is still around 4% against a double-digit promise that keeps moving. They've also raised the long-term growth target before giving the detail behind it. Trust the base business, take Cenexi dates with a pinch of salt.
