Piramal Pharma Ltd

Contract drug developer and maker (CDMO) for global pharma and biotech from sites in India, the US, UK and Canada, plus a US-led complex hospital generics business (anaesthesia gases, intrathecal and injectable drugs) and Indian consumer brands like Lacto Calamine and Little's.

Concall-tracker report, filed under Q2-2027. Prepared 11 Nov 2026.

1. Snapshot

Number	Value	Plain read
Market cap	Rs 32,588 cr	What the market values the company at
Q2 FY27 revenue	Rs 2,617 cr (consolidated)	Up 28% on a year ago
Q2 FY27 EBITDA	Rs 385 cr, about 15% margin	Up 72%; margin up more than 3.5 points
CDMO revenue Q2	Rs 1,424 cr	Up 36%; more than half of sales
Net debt to EBITDA	3.4x	High borrowing for the profit it earns, down from 3.7x in March
P/E	about 44 (standalone basis on Screener)	Pricey

2. Concall coverage

Calls read from Q2 FY26 (Nov 2025) to Q2 FY27 (28 Oct 2026), plus the older 2022-2023 calls on Screener for the earlier story. Screener was missing most 2024-2026 transcripts; Q2 FY26, Q4 FY26 and Q2 FY27 were fetched from the company's investor site.

Quarter	Date	Transcript read?
Q2 FY23 to Q2 FY24	Nov 2022 - Oct 2023	Yes (skimmed)
Q2 FY26	6 Nov 2025	Yes (company site)
Q4 FY26	May 2026	Yes (company site)
Q1 FY27	Jul 2026	Yes
Q2 FY27	28 Oct 2026	Yes, read in full (company site)

Latest concall highlights: Q2 FY27 (28 Oct 2026)

- Revenue up 28% to Rs 2,617 cr, EBITDA up 72% to Rs 385 cr.
- FY27 guidance raised from early-to-mid-teens growth to about 19-20%, with profit growing much faster.
- CDMO: 22 new customers in H1, Phase 3 molecules up from 25 to 28, ADC (antibody-drug conjugate) revenue up over 50%, on-patent commercial manufacturing up 39%. North America sites ahead of plan.
- Hospital generics up 32%, helped by the newly bought Kenalog brand, though supply is tight until a new contract maker is approved.
- Bayer distribution deal in consumer health ends Dec 2026, low-margin so little impact. UK Morpeth site has FDA observations being fixed.

Business mix and capacity

- Most revenue is outside India: CDMO and hospital generics sell mainly to the US and Europe; consumer health is India.
- Utilisation improving at North America and ADC sites; numbers not given. Lexington sterile fill-finish expansion progressing; Riverview high-potency API done.

3. Earning trigger thesis

The driver is CDMO recovery: after a big customer destocked in FY26 and growth stalled, orders and enquiries are rising across India and North America, and fuller plants push margins up fast. Kenalog adds a profitable hospital product. The FY30 target of US$1.2 bn CDMO revenue still stands.

Trigger	What management said	Evidence so far	Time horizon	Strength
CDMO order recovery	Momentum to continue through FY27	CDMO up 36% in Q2	FY27-FY30	Strong
Operating leverage	Profit to grow much faster than revenue	EBITDA up 72%	FY27	Strong
Kenalog	Growth catalyst for FY27	Selling, supply tight	FY27-FY28	Moderate

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Net debt rose on Kenalog, Yapan and Lexington; ratio fell to 3.4x (Oct 2026)
New business	Yes	Kenalog acquisition; controlling stake in Yapan Biotech for biologics (Oct 2026)
Margin up	Yes	EBITDA margin up more than 350 basis points from capacity use and operating leverage (Oct 2026)
New management	No	-
New capacity	Yes	Riverview high-potency API expansion done; Lexington sterile fill-finish under way (Oct 2026)
Big orders	Yes	Sustained build-up in RFPs and orders, more Phase 3 molecules (Oct 2026)
Turnaround	Yes	Recovery from FY26 destocking; guidance raised (Oct 2026)
Promoter buying	No	-

Single concrete driver: CDMO orders are recovering across India and North America after the FY26 destocking, and fuller plants are lifting margins fast.

3c. Margin bridge

EBITDA margin is about 15% vs about 11% a year ago. Higher CDMO volumes filled India and North America plants, spreading fixed costs, with cost control on top. Management expects profit to keep outgrowing revenue. (lasting)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict

FY26 start	FY26 growth	Cut to flat in Nov 2025 after a customer destocked	Missed
May 2026	FY27 early-to-mid-teens growth	H1 up 23%; raised to 19-20%	Delivered
Nov 2025	Hold FY30 CDMO target	Still held	Too-early
May 2026	Kenalog contributes in FY27	Selling, supply tight	Partly
2025-2026	Resolve Morpeth FDA observations	Response filed	Too-early

The long-term story (CDMO plus hospital generics, FY30 target) has stayed the same. FY26 was a bad miss when one product destocked, but management cut guidance openly and FY27 is now beating plan.

5. Bottom line

Durable earning trigger? YES

The CDMO recovery is in the numbers, with leading signs (new customers, Phase 3 molecules) pointing the same way.

Management consistent? MAYBE

FY26 guidance was missed and cut, but FY27 has been raised. Debt is still high.

> **6. Checkpoints for next quarter**
>
> - Second half revenue beats the first half
> - EBITDA margin stays above last year's level
> - Kenalog new contract maker gets approved
