1. Snapshot

What it does: Navin Fluorine is an Indian specialty-chemicals maker built on fluorine chemistry. It sells refrigerant gases and fluorides (the HPP, High Performance Products, arm), makes complex fluorine molecules for global crop-protection companies (specialty chemicals), and does contract manufacturing for global drug makers (CDMO, Contract Development and Manufacturing Organisation). Most of the business runs on multi-year contracts with big overseas customers.

Measure	Value	What it means
Market cap	₹46,349 cr	What the whole company is worth on the market.
Share price (52-week range)	₹9,010 (₹5,437-9,035)	Trading right at its one-year high.
P/E	72×	₹72 paid for every ₹1 of last year's profit. Expensive; the price assumes growth keeps coming.
Q2 FY27 revenue (consolidated)	₹1,191 cr	Sales for Jul-Sep 2026, up 57% on a year ago and 14% on the June quarter. Another record.
Q2 FY27 EBITDA margin	34.2%	Operating profit before interest, tax and depreciation: ₹34 kept per ₹100 of sales, despite costlier raw materials. Long-term guide is still 30%.
Q2 FY27 net profit	₹269 cr	Up 81% on a year ago. H1 profit crossed ₹500 cr (₹513 cr).
Working capital	72 days	How long cash sits in stock and unpaid bills. Inside the company's own 70-75 day frame.

Screener's quarterly table is standalone (Q2 sales ₹737 cr). Management reports consolidated figures, which include the Dahej subsidiary holding the newer plants. This report uses the consolidated numbers from the call.

2. Concall coverage (split view)

Quarter	Call date	Read for this report?
Q4 FY22 → Q4 FY26 (16 calls)	May 2022 to May 2026	Carried forward from the Q4-2026 and Q1-2027 reports
Q1 FY27 (prior boundary)	5 Aug 2026	Read in the Q1-2027 report
Q2 / H1 FY27	30 Oct 2026	Newly deep-read in full ★

Only the Q2 call was read in full this time. The transcript is the company's own BSE filing dated 6 Nov 2026, which this time downloaded cleanly through Screener's link. The four-year backstory comes from the earlier reports.

★ Latest concall highlights: Q2 FY27 (call held 30 Oct 2026)

- **Another record quarter, every arm up.** Revenue ₹1,191 cr (+57%), EBITDA ₹407 cr (+66%), profit ₹269 cr (+81%). Refrigerants gained on price and volume from the new acid plant, agro molecules on more campaigns from the same plants, CDMO on its main European customer. Plain read: growth is broad, not one lucky line.
- **A big contract got longer.** The HFO supply contract with Solstice (the old Honeywell business) was extended four years to December 2032, adding about US$180m of revenue potential. Plain read: the question of "what happens after 2028" on this contract is answered.
- **Margin view raised for this year.** The CFO said FY27 should land in the same range as H1 (about 34%), while keeping the long-term guide at 30%. Raw-material costs are up, but pricing, a weaker rupee and efficiency covered it.
- **Most plants on time, two newer ones slipped.** Dahej debottlenecking commissioned in September as promised. The R32 refrigerant line is "commissioning shortly" and cGMP4 Phase 2 stays on for end-Q4 FY27. But the Chemours cooling-fluid plant moved again to Q3 FY27, and the advanced-materials plants moved from Feb-Mar 2027 to Q2 FY28.
- **CDMO US$100m target "at striking distance"** on order visibility. Capex this year about ₹700 cr; growth to FY28 "pretty much baked in".

Business mix & capacity (Q2 FY27). Domestic vs export split not broken out by management. The Solstice and Chemours contracts and most CDMO customers are overseas, so it leans heavily on exports, and the CFO credited a forex gain this quarter. Utilisation: no percentage given. The new acid (AHF) plant is still ramping and "hasn't hit full capacity". The agro multi-purpose plants will run "far" above their rated output by year end, and the Nectar agro plant is at 60-65% of peak this year. New capacity: R32 line ramps through Q3-Q4 FY27, cGMP4 Phase 2 by March 2027, Chemours in Q3 FY27, advanced materials by Q2 FY28.

★ Since our last report

Builds on the Q1-2027 report (boundary call 5 Aug 2026). Prior verdicts: trigger YES, consistency YES.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	New plants full and earning; next batch lands in FY27.	Revenue +57%, all three arms up, debottleneck live, contract extended.	Confirmed
Consistency: YES	Plants on schedule; one Chemours slip.	Core plants and margins delivered; two newer projects slipped.	Confirmed, with a crack
R32 line (Oct-Dec 2026)	On track.	"Commissioning shortly", ramp from end of Q3.	On-track
Dahej debottlenecking (Oct-Dec 2026)	On track.	Commissioned Sep 2026, slightly early.	Delivered
Chemours plant	Moved from Jun/Jul to end Sep 2026.	Now Q3 FY27. Called a "conscious choice" of process route; orders already in hand.	Slipping (second time)
Advanced-materials plants	Phase one done around Feb-Mar 2027.	Now "Q2 FY28", said to be "as per schedule".	Slipping (not flagged)
CDMO US$100m in FY27	"Very much on track".	"Striking distance" on order book.	On-track
Margin 32-33% ±1	Guide for the next year or two.	34.2% in Q2; FY27 to stay near the H1 level.	Improving

Verdict change this quarter: both unchanged at YES. The things that make the money (core plants, margins, CDMO, contracts) delivered or beat. The crack is the newer bets: Chemours has now slipped twice, and the

advanced-materials date moved about two quarters without anyone calling it a delay. Small next to the rest, but it's a pattern worth watching.

★ 3. Earning-trigger thesis

Same engine as before: a string of new fluorine plants, mostly backed by long contracts with global companies, coming online one after another. The plants built in FY23-FY26 are full and drove this quarter. The next batch (debottlenecking now, R32 by year end, cGMP4 Phase 2 by March) lands within FY27, and management says growth to FY28 is already locked in. The Solstice extension protects the base past 2028. Chemours and advanced materials are the longer-dated options, aimed at data-centre cooling and chips, and both are running late. At 72× earnings the market is paying for all of it.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Refrigerants / R32 / HFO	R32 line commissioning shortly; HFO contract to 2032.	HPP up on price and volume; US$180m extension signed.	Now to FY32	Strong	↑ Base locked in longer
Specialty chemicals (agro)	Campaigns for five new molecules; plants run above rated output.	Strong quarter; debottleneck live from September.	FY27-FY28	Strong	↑ Improving
CDMO (pharma)	US$100m in FY27; Phase 1+2 worth ₹900-1,000 cr a year by FY28-29.	Growing with Fermion; one molecule approved in China.	FY27-FY29	Strong	Unchanged, on track
Chemours cooling fluid	Commission Q3 FY27; about 15 months after that to size demand.	Orders in hand; Chemours qualified with an OEM.	FY28+	Moderate	↓ Slipped again
Advanced materials	10-15% of a bigger Navin by 2030.	Lab approvals, DRDO project on schedule; plants now Q2 FY28.	FY28+	Unproven	↓ Date moved

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY22-FY23	Commission Honeywell refrigerant, MPP and agro plants.	All on schedule; record FY23.	Delivered
FY24	Hold margins near 24-25%.	Agro destocking; margin fell to ~17%; MD left.	Missed (cyclical)
FY25	Recovery in H2 under new MD.	Margin back to 25.5% by Q4; R32 line commercialised.	Delivered
FY26	Ramp cGMP4, AHF, R32; higher margins.	Sales +41%, margin 32.6%.	Delivered
Q1 FY27 call	Margin 32-33% ±1; debottleneck in Q3.	34.2% in Q2; debottleneck done in Sep.	Delivered (beat)
CDMO US$100m	By ~FY26, then FY27.	"Striking distance" in FY27.	Partly (late, now close)
Chemours plant	Q1 FY27, then end Q2 FY27.	Now Q3 FY27.	Slipped twice
Advanced materials	Phase one by Feb-Mar 2027.	Now Q2 FY28.	Slipped

Narrative drift. Very little. The same plant names come up call after call and move from "approved" to "on track" to "running". New ideas (advanced materials, DRDO) are add-ons funded in small steps, not a change of story. The CFO was again open about raw-material costs and why the HFO extension looks lower per year than the old contract. The

one thing to note: the newer, more exciting projects are the ones running late, and the advanced-materials delay was described as "as per schedule" rather than owned. That's mild, but it's the first time this team has moved a date without saying so.

5. Bottom line: two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged

More proof this quarter. Every arm grew, margins held above guide despite costlier inputs, a key contract was extended to 2032, and fresh capacity keeps arriving through FY27. Management says FY28 growth is already set by plants under construction. Risks are R32 oversupply in India, agro pricing, and a stock price at 72× earnings that needs all this to keep going.

Management consistent? → YES · vs last quarter: unchanged

The promises that drive earnings were kept or beaten: margins, the debottleneck, cGMP4, the CDMO target. What stops this being a clean pass is the newer projects. Chemours has slipped twice and advanced materials moved about two quarters. Neither touches FY27 earnings, so it stays YES. Another quarter of dates moving on the new bets would make it a MAYBE.
