Yatharth Hospital & Trauma Care Services Ltd

Concall Tracker · Q1 FY27 update · ticker YATHARTH · BSE 543950 · builds on the Q4-2026 report

1. Snapshot

What the business does: Yatharth runs multi-speciality hospitals around Delhi-NCR (Noida, Greater Noida, Noida Extension, two in Faridabad, Model Town in New Delhi) plus Jhansi-Orchha and Agra. It makes money treating admitted and walk-in patients, paid by self-paying patients, private insurers and government schemes. It grows by buying or building hospitals, filling the beds and pushing up the average bill per bed (ARPOB, average revenue per occupied bed per day).

Number	Plain read
Q1 FY27 revenue ₹393 cr, up 51% on the year, up 15% on the quarter	Highest quarter ever. Half again as much as the same quarter last year, mostly because last year's new hospitals are now filling up.
Q1 FY27 operating profit (EBITDA) ₹92 cr, margin 23.3%	EBITDA is profit before interest, tax and depreciation. Out of every ₹100 billed, about ₹23 is left. Without the two loss-making new units it's 28.1%.
Q1 FY27 net profit ₹45 cr	Record quarter, but only about ₹12 of every ₹100 of sales reaches the bottom line. Interest and depreciation on new hospitals are eating into it.
FY26 revenue ₹1,207 cr, net profit ₹170 cr (from the prior report)	The base year. Management says FY27 growth will beat FY26's.
Debt ~₹300 cr, up from ~₹210 cr in March	It borrowed about ₹80 cr toward the Gurugram buy. Still small next to the cash it generates. Management is comfortable going up to about twice yearly EBITDA.
Promoter holding 55.8% (Jun 2026)	Flat for three quarters, after falling from ~66% through share sales that paid for the expansion.

Quarter figures are consolidated, as given on the 11 Aug 2026 call. Promoter holding is from Screener.

2. Concall coverage

Quarter(s)	Call date	How it was read
Q1 FY24 → Q3 FY26 (11 calls)	Aug 2023 – Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26	May 2026	Prior report's boundary call, carried forward
Q1 FY27	**11 Aug 2026**	**Newly deep-read in full ★**

Thirteen straight quarterly calls now, about three years. That's an unbroken record, so the consistency read has a lot to go on.

★ Latest concall highlights: Q1 FY27 (call held 11 Aug 2026)

- **Record quarter.** Revenue ₹393 cr, up 51% on the year, EBITDA up 39%. The old hospitals grew 22%. The four newer ones (Greater Faridabad, New Delhi, Faridabad Sector 20, Agra) brought in ₹107 cr, about a quarter of the group.
- **New units are turning faster than promised.** Faridabad Sector 20 hit operating breakeven in about 9 months. Management had pencilled in 12 to 14. Agra, bought only last quarter, is already making a 20%-plus margin. New Delhi (Model Town) is due to break even in Q3 or Q4 this year, which is on its original 15 to 17 month plan.

- **Bill per bed keeps climbing.** Group ARPOB hit a record ₹34,758 a day, up 7%. Noida Extension and New Delhi both crossed ₹50,000 for the first time. Cancer care is already about a tenth of revenue on a single radiation machine. Two more are on the way.
- **Guidance held, bed timeline pulled in.** FY27 revenue growth should beat last year's, with EBITDA margin "upwards of 24%" and ARPOB up 9 to 10%. The 5,000-bed goal now looks about two and a half years out, not three. The first maiden dividend and ESOP scheme were approved.
- **The catch.** Net profit margin dropped as interest and depreciation from the new hospitals rose. The government-scheme share of revenue went *up* to about 40% (management blames a rate revision, not more patients). Gurugram now opens around March or Q1 FY28. Tone: confident.

2c. Business mix & capacity

Beds: 2,555 beds built across eight hospitals, but only 1,820 are "census" beds (staffed and counted) so far, up 165 on the quarter. Group occupancy is about 68% on those. Read: there's plenty of room to fill before it needs new buildings. The "3,200" figure is announced capacity, which adds Gurugram (250 beds) and about 450 brownfield beds in the Noida cluster, due over the next 15 to 19 months.
Occupancy by hospital: Noida and Jhansi about 91%, Agra 89% (on 110 census beds out of 250), Greater Noida 74%, Greater Faridabad 63%, Noida Extension 56%, Faridabad Sector 20 49%, New Delhi 29%.
Who pays: government schemes about 40% this quarter, the rest cash and insurance. The newer hospitals run under 10% government. No export split, since it's a hospital chain. Foreign patients are still small. Five overseas information centres opened this quarter (CIS and Africa).

2d. Since our last report ★

This builds on the **Q4-2026 report** (boundary call May 2026), which said **Trigger: YES** and **Consistency: YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger	Proven add-beds, fill-beds, raise-the-bill engine	Revenue up 51%, new units breaking even early, ARPOB at a record	Confirmed
Consistency	Steady story, delivered on cadence	Same playbook, guidance reaffirmed, bed timeline pulled in	Confirmed
New-unit breakeven (15–18 months)	Newest three on track	Faridabad 20 in ~9 months, Agra at 20%+ margin, Delhi on plan	Improving
Gurugram premium hospital	Opens ~April 2027	"Q1 of next fiscal", close to March or Q1 FY28	On-track
Payer mix: government down to ~25%	~35%, moving the right way	~40% this quarter (rate revision, volumes falling, says mgmt)	Slipping
Margin drag from new units	Reported 24%, flagged in advance	23.3% reported, 28.1% underlying. FY27 guided "upwards of 24%". Net margin squeezed by interest and depreciation	On-track
Receivable days	Stuck high, repeatedly missed	Not discussed on this call	No update

Verdict change this quarter: both unchanged. The new call adds evidence for the engine. The one thing that went the wrong way, the government share of revenue, is small enough not to move the verdict, but it's worth watching next quarter.

★ 3. Earning-trigger thesis

The driver is the same as before: buy or build hospitals in and around Delhi-NCR, fill the beds over a year or two, and lift the bill per bed by adding cancer care, transplants and other high-end work while keeping government-scheme patients down in the new units. Q1 FY27 is the best evidence yet. The newer hospitals are a quarter of revenue and turning profitable faster than promised, and the premium units now bill over ₹50,000 a bed a day. What drags is the bottom line, since every new hospital brings interest and depreciation before it earns.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Bed expansion	5,000 beds in about 2.5 years, at least one new hospital a year	2,555 built, 3,200 announced; talks on more assets in nearby state capitals	Now – 2.5 yrs	Strong	↑ timeline pulled in
Ramp of new units	Breakeven in 15–18 months, then 15–20% margin	Faridabad 20 breakeven in ~9 months; Agra 20%+; Delhi due H2	12–24 months	Strong	↑ beating plan
ARPOB uplift	9–10% a year	₹34,758, up 7%; two units above ₹50,000; oncology ~10% of sales	Ongoing	Strong	unchanged
Payer-mix shift	Cut government work	New units under 10%, but group went up to ~40%	2–3 yrs	Moderate	↓ group share rose
Medical travel	More foreign patients	Five overseas info centres opened; still small	2–3 yrs	Moderate	unchanged

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 onward	One acquisition a year, double the beds	Faridabad, Model Town, second Faridabad, Agra, Gurugram. More in talks	Delivered
Every year	~30% revenue growth	FY24 +29%, FY25 +31%, FY26 +36%, Q1 FY27 +51%	Delivered
New units	Breakeven in 15–18 months	Faridabad 20 in ~9, Agra profitable at once, Delhi on track	Delivered
FY24–Q1 FY27	EBITDA margin ~25%+	Reported drifted to 23–24%, underlying ~28%. Drag was flagged in advance	Partly
Since FY24	Shrink government share toward ~25%	~40% → ~35% → back to ~40%. New units are clean, the group isn't yet	Partly
Since FY24	Cut receivable days	Still well above target as of FY26. Not addressed this call	Partly
Q4 FY26	Gurugram live ~April 2027	Now "Q1 next fiscal". Roughly the same, maybe a few weeks later	Too-early

Narrative drift: none worth flagging. It's the same three-step playbook it's been since the IPO, and the targets keep getting pulled forward rather than pushed back. Two soft spots carry over: reported margins sit below the old ~27% while new units ramp, and the government share of revenue hasn't come down at group level. Management was also open that it's not chasing a 28% group margin any time soon, because it keeps opening hospitals. That's honest, not a walk-back.

5. Bottom line

Durable earning trigger? → YES vs last quarter: unchanged

Nothing new knocked it. If anything, Q1 FY27 strengthened it: record revenue, new hospitals breaking even ahead of schedule, and the premium units billing at the top of the group. The bed pipeline to 3,200 is funded and the 5,000 goal is now closer. The real watch item is profit after interest and depreciation, which will stay under pressure while Gurugram and the brownfield beds are built.

Management consistent? → YES vs last quarter: unchanged

The new call didn't change this. Guidance was reaffirmed, the early breakevens beat what they'd said, and the story didn't move. The blemishes are the same ones as before: government share of revenue went the wrong way this quarter, receivables weren't addressed, and Gurugram is maybe a touch later. None of that is a broken promise yet.

Sources: Q1 FY27 earnings-call transcript (11 Aug 2026, via Screener.in), the Q4-2026 concall-tracker report for the earlier 12 calls, and Screener.in tables. Coverage capped at calls held up to 30 Sep 2026. EBITDA = operating profit before interest, tax and depreciation. ARPOB = average revenue per occupied bed per day. Not investment advice.
