Cords Cable Industries Ltd

Concall tracker report, filed under Q2-2027 | Prepared 11 Nov 2026 | NSE: CORDSCABLE

1. Snapshot

Cords Cable makes industrial cables: control and instrumentation cables, power cables up to 3.3 kV, thermocouple and communication cables, many of them made to order. Buyers are power plants, oil and gas, refineries, steel, cement, metro rail, airports and renewable energy projects. Plants are at Kaharani and Chopanki in Rajasthan.

Number	Value	Plain read
Market cap	about ₹415 cr	A small company; the stock has more than doubled off its 52-week low.
FY26 sales	₹954 cr, up 20%	Sales have grown about a fifth a year for three years running.
FY26 profit	about ₹21 cr, up about 40%	Profit is growing faster than sales, but from a small base.
Operating margin	about 6%, down from 10-11% in FY20-21	It keeps only about ₹6 of each ₹100 of sales before interest and tax. Copper and other metal costs pass through, so the margin is thin.
Interest cost	about ₹26 cr in FY26	Interest still eats close to half of operating profit. Debt is mostly working capital.
P/E	about 13.5x	Cheap next to listed cable peers, which reflects the thin margins and small size.

2. Coverage

No concall transcripts were available on Screener. This report is based on a global web deep-dive. The company doesn't hold earnings calls. Sources used: Screener.in financials and shareholding; the FY2025-26 Directors' Report (35th Annual Report, dated 13 Aug 2026, via IndiaInfoline); FY26 results coverage (Whalesbook, ScanX); Q2 FY27 results coverage (Univest); CARE rating as cited in the annual report. With no calls there are no promises to check, so the consistency read is limited.

Latest update highlights: Q2 FY27 results (board meeting 6 Nov 2026; Screener, Univest)

- Sales ₹352 cr, up 56% on a year ago: the biggest jump in years, and a clear step up from about ₹250 cr in each of the four quarters before.
- Operating profit ₹21.6 cr, up about 54%. Margin stayed at about 6%: it's grown by selling more, not by earning more per sale.
- Net profit ₹9.7 cr versus ₹3.6 cr a year ago, nearly three times.
- No commentary from management on why sales jumped. Copper prices and bigger project dispatches are the likely reasons, but the company hasn't said.

Business mix and capacity

Exports: foreign exchange earnings rose to about ₹108 cr in FY26 from about ₹20 cr in FY25, so exports went from about 3% to about 11% of sales. The annual report names the Middle East and Africa as target markets.

Capacity: Kaharani about 35,000 and Chopanki about 30,000 core-cable-km a year (company profile). Capacity utilization is not disclosed.

3. Earning trigger thesis

There's no trigger that management has named. The annual report talks in general terms: widen the product range, add customers, grow exports and ride industrial and infrastructure spending. An older company plan to add HT (high-voltage) and rubber cables at Chopanki has no timeline or cost attached, and the FY26 report doesn't mention it. The one concrete thing in the numbers is exports jumping about five times in FY26, but the company hasn't explained it or said whether it repeats.

Trigger	What management said	Evidence so far	Time horizon	Strength
Exports to Middle East and Africa	"increase export opportunities" (FY26 annual report)	Export earnings roughly five times FY25	Unclear	Unproven: no explanation
Industrial and infra cable demand	General outlook, "no material adverse change"	Sales up about a fifth a year, and over half in Q2 FY27	Ongoing	Moderate, but it's the whole sector, not Cords
HT and rubber cables at Chopanki	Mentioned in older company material only	Nothing in FY26 report	Unknown	Weak

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	Not discussed; CARE BBB rating reaffirmed (FY26 annual report).
New business	No	Annual report says no new line or diversification in the year.
Margin up	No	Margin flat at about 6%.
New management	No	Only a change of statutory auditor proposed for FY27.
New capacity	No	No capex or commissioning announced.
Big orders	No	No order book or order wins disclosed.
Turnaround	No	Not applicable; profitable throughout.
Promoter buying	No	Promoter stake flat at about 52%.

Single concrete driver: none named by the company; the visible change is a big jump in exports and in Q2 FY27 sales, without an explanation.

4. Management consistency

Period	What was promised	What actually happened	Verdict
Earlier years	Add HT and rubber cables at Chopanki, move up the value chain	No sign of it in the FY26 report, margins lower than five years ago	Dropped (quietly)
FY26 annual report	Grow exports, widen customer base	Exports did grow sharply in FY26	Delivered
FY27	No guidance given	Q2 FY27 sales up 56%	Too early

Narrative drift: there isn't much of a narrative. Management communicates through filings only, never sets targets, and so is rarely wrong. That's also why it's hard to trust or track. The value-chain move has gone quiet while the margin slid from about 10% to about 6%.

5. Bottom line

Durable earning trigger? NO

Sales and profit are growing nicely, and Q2 FY27 was a big quarter, but there's no named driver behind it. Thin margins and heavy interest mean a copper price swing or a slow-paying project can wipe out a quarter's gains. The export jump is the thing to watch; if it holds, the case changes.

Management consistent? MAYBE

No calls and no targets, so there's little to score. What was said in the annual report (grow exports) happened. The old plan to move into higher-value cables has gone silent.

6. Checkpoints for next quarter

- Quarterly sales stay well above the old run rate in Q3
- Operating margin holds at least at the current level on higher sales
- Interest cost doesn't rise faster than operating profit
