Savita Oil Technologies Ltd

Concall Tracker, Q1-2027 update · builds on the Q4-2026 report · new source read: Q1 FY27 investor presentation (filed Sep 2026) · Report date 6 Nov 2026 · BSE 524667 / NSE SOTL

What the business does: Savita buys base oil (a refined petroleum feedstock) and turns it into specialty fluids: transformer oil that cools and insulates electricity transformers, white and mineral oils for cosmetics, pharma and plastics, cable-filling compounds and waxes, and its own SAVSOL brand of car, bike and industrial lubricants. Transformer and specialty oils are about three-quarters of sales. It's debt-free and also owns 53 MW of wind power.

1. Snapshot

Figure	Value	What it means
Q1 FY27 total income (Apr-Jun 2026)	Rs 1,513 cr vs Rs 1,014 cr	Highest quarter ever, up 49%. Part of it is volume and part is simply higher selling prices after crude oil shot up.
Q1 FY27 operating profit (EBITDA)	Rs 397 cr, margin 26.2%	Usually this business makes 5-7 rupees per 100 of sales. This quarter it made 26. That's mostly the effect of oil prices jumping while it held cheaper stock (inventory gains), not a new normal.
Q1 FY27 net profit	Rs 288 cr vs Rs 56 cr	One quarter earned more than the whole of FY26 (Rs 182 cr).
FY26 full year (context)	Income Rs 4,408 cr · margin 6.6%	A normal year. Useful as the yardstick for what "regular" earnings look like.
Market value / P/E (Screener, Nov 2026)	Rs 4,644 cr · ~7.8x	Looks very cheap, but only because one-off windfall profit sits in the trailing earnings. On normal-year profit it's much nearer the ~19x of last time.
Balance sheet	Debt-free	Funds itself and has paid dividends every year since listing in 1994.

2. Coverage: what was read

Savita Oil does not hold earnings concalls. No concall transcripts were available on Screener, so this report is based on a global web deep-dive, led by the company's own quarterly investor presentation, which carries a signed statement from the Chairman & MD each quarter.

Source	Period	Read?
16 quarterly decks, Q1 FY23 → Q3 FY26	Aug 2022 - Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 deck (prior boundary)	May 2026	Read in the Q4-2026 report
Q1 FY27 investor presentation	Filed Sep 2026 (on BSE via Screener)	**Newly read in full ★**
Screener quarterly results	To Jun 2026	Cross-check

Only information published up to 30 Sep 2026 was used.

★ Latest update highlights: Q1 FY27 (investor presentation, Sep 2026)

- **Record quarter, but a windfall.** Income up 49% and profit before tax up more than five times to Rs 387 cr. The company itself says crude and refined-product prices rose sharply, lifting its selling prices, "coupled with inventory gains." Plain read: it had stock bought cheap and sold it dear. That doesn't repeat every quarter.
- **Real volume growth too.** Double-digit volume growth in lubricants and exports. Domestic white-oil sales fell. April volumes were hit hard by feedstock worries and port problems from the Middle East crisis, then normalised.
- **Ester fluids getting traction.** The Chairman says the ester-based range is "rapidly gaining traction with several significant OEM approvals". SAVSOL Ester5 lubricants are growing four times as fast as the industry. Still no revenue figure for the new range.
- **New-age products.** Focus on fluids for data centres, battery storage and electric vehicles under its Quanticool line, which it calls a big opportunity for the years ahead.
- **Tone: optimistic but cautious.** Export demand expected to stay strong, but feedstock prices are swinging daily. Siddharth Mehra becomes Joint MD from 1 Oct 2026.

Business mix & capacity

Domestic vs exports: About 83% domestic and 17% exports (FY26, latest split given). Plain read: mostly an India business, with exports the faster-growing piece this quarter.
Product mix: Petroleum specialty oils (transformer, white oils, specialty products) about 73% of sales, lubricants about 26% (FY26).
Capacity: Utilisation not disclosed. The deck mentions "continued investments in increasing capacity" with no number or timeline.

★ Since our last report

Builds on the Q4-2026 report (Q4 FY26 deck, May 2026). Prior verdicts: **Trigger MAYBE**, **Consistency MAYBE (leaning yes)**.

Prior read	What we said then	What's new	Movement
Trigger: power-infra demand + premium lubricants	Working in FY26, but margins thin and tied to base oil	Margins exploded on the oil-price spike, which proves the point that profit follows oil prices	Unchanged
Consistency	Steady, honest story; misses on the new-product hype	Same story, openly credits inventory gains instead of claiming the profit as skill	Confirmed
Ester / data-centre / EV / storage fluids	"Nascent" for two years, no revenue	"Several significant OEM approvals" and Ester5 at four times industry growth, but still no revenue disclosed	Improving (slowly)
Commodity risk	Main risk	Middle East crisis hit April volumes, then the price spike gave a windfall. Cuts both ways	Unchanged

Verdict change: both unchanged. A huge profit quarter driven by oil prices doesn't change the core question of whether Savita can earn steadily better margins. If anything, it makes clear how much the bottom line follows crude.

★ 3. Earning-trigger thesis

Management's story is unchanged. India keeps building power lines and transformers, which need transformer oil. SAVSOL lubricants are moving up-market with the ester-based Ester5 range. New ester fluids for data centres, battery storage and EVs could open new markets. The underlying volume growth looks real. But this quarter's giant profit came from the oil price, not from those drivers, and the newest products still haven't shown up as a number anyone can check.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
Transformer oil / power-infra demand	India's grid build-out drives demand	Record FY26 volumes; specialty oils three-quarters of sales	Ongoing	Moderate	Unchanged
Premium lubricants (Ester5)	Grow faster than the category	Growing four times industry; double-digit lubricant volume growth	Now	Moderate	↑
Exports	Demand to stay buoyant	Double-digit volume growth in Q1	Near term	Moderate	↑
Ester fluids for data centres, BESS, EV	Substantial growth in years ahead	OEM approvals, no revenue disclosed after two-plus years	3-5 yrs	Unproven	Slightly ↑
Oil-price inventory gains	Not a strategy; disclosed as a factor	Main reason Q1 margin hit 26%	One-off	Not durable	New

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY23	Ester plant in Q2 FY24	Commissioned on time (Aug 2023)	Delivered
FY24-FY25	Margins to "normalise"	Profit fell two years running, bottomed in FY25	Missed
FY26	Double-digit growth, premiumise	Record revenue and volume, profit +60%	Delivered
FY24 → Q1 FY27	Data-centre, EV and storage fluids to add "significant volumes"	Now OEM approvals; still no revenue shown	Too early
Q1 FY27	Exports to stay strong	Export volumes up double digits	On track

Narrative drift: very little. The Chairman's quote reads like the last dozen: esters, premium lubricants, new-age fluids. To their credit they spelled out that inventory gains helped this quarter rather than dressing it up. The weak spot hasn't changed either. The flashiest products have been "about to take off" since 2023.

5. Bottom line

Durable earning trigger? → MAYBE

vs last quarter: unchanged

Volumes are growing and Ester5 is working, so there's something real. But the record quarter came from the oil price, which can reverse just as fast. Until the new ester fluids show revenue or margins hold up without a price spike, it's a Maybe.

Management consistent? → MAYBE (leaning yes)

vs last quarter: unchanged

Same steady, candid story, and they were upfront about where the windfall came from. Held back by the long gap between the new-product talk and any revenue to show for it. No concall means there's no analyst Q&A to test them on it.

Watch: next quarter's margin once the inventory gain fades, base-oil prices, and the first revenue numbers from the ester range.

Sources: Savita Oil Technologies investor presentation, September 2026 (Q1 FY27, filed on BSE, linked from Screener.in), prior Q4-2026 report covering 16 earlier decks, Screener financial snapshot. No earnings concall transcripts exist. "cr" = crore. EBITDA = operating profit before interest, tax and depreciation. BESS = battery energy storage system. OEM = equipment maker. This is not investment advice. Do your own due diligence.
