# TPL Plastech Ltd

Concall Tracker · Q2 2027 (quarter ended Sep 2026) · Global web deep-dive (no concall transcripts) · NSE: TPLPLASTEH · BSE: 526582 · Prepared 11 Nov 2026

### Read this first: the company is merging into its parent

On 29 Sep 2026 the board approved merging TPL Plastech into Time Technoplast (TTL), which already owns 74.86%. Public shareholders get **403 TTL shares for every 1,000 TPL shares**. Once the NCLT (the company-law tribunal), the exchanges and shareholders approve, TPL is dissolved and its listing ends. From here, owning TPL mostly means owning a slice of Time Technoplast at that ratio; TPL's own earnings matter less than TTL's share price.

## 1. Snapshot

**What the business does:** TPL makes industrial plastic packaging: big plastic drums, jerry cans and IBCs (Intermediate Bulk Containers, the 1,000-litre caged plastic tanks chemical makers ship liquids in). Customers are chemical, specialty chemical, pharma, FMCG and food companies, sold business-to-business with monthly price formulas that pass polymer cost changes through. Five plants: Silvassa, Ratlam, Vizag, Dahej and Bhuj.

| | |
|---|---|
| **Market cap** | ₹575 cr at ₹73.7 a share. A small-cap; three quarters of it is held by the parent. |
| **P/E** | 18.1x. Buyers pay about ₹18 for each ₹1 of profit, a fair rating for steady packaging. |
| **Revenue** | FY26 ₹423 cr (up 21%), trailing twelve months ₹498 cr. Sales have nearly tripled since FY21. |
| **Net profit** | FY26 ₹29 cr (up 23%), trailing twelve months ₹32 cr. Profit has grown every year since FY21. |
| **Operating margin** | About 11-12% for years, now 9.3%. Out of each ₹100 of sales about ₹9 is operating profit. Lower because higher polymer prices are passed on, which inflates sales more than profit. |
| **Debt** | Borrowings ₹19 cr (Mar 2026), down ₹26 cr in FY26. Small next to ₹48 cr of yearly operating profit. |
| **Returns** | ROCE 22.6% in H1 FY27, up from 21.0%. It earns about 23 paise per rupee of capital, a good return, and it's rising. |
| **Dividend** | ₹1.30 a share for FY26, 35% of profit paid out, yield about 1.7%. |

## 2. Coverage

### No concall transcripts available: global web deep-dive

No earnings-call transcripts are on Screener for TPL Plastech; it doesn't hold investor calls. This report reads the company's own filings instead, which are unusually detailed: quarterly investor releases, the AGM chairman's speech, and board outcomes. Sources: Screener.in financials; NSE filings Feb-Nov 2026 (results releases of 11 Feb, 26 May, 4 Aug and 4 Nov 2026; chairman's speech 22 Sep 2026; merger scheme 29 Sep 2026; Bhuj plant start 20 Aug 2026; CEO and CFO changes 26 Aug and 4 Nov 2026).

| Period | Source read | Note |
|---|---|---|
| FY21 → FY26 | Screener financials, FY26 release, AGM speech | Trend and FY26 targets |
| Q1 FY27 (Jun 2026) | Investor release 4 Aug 2026 | Promised Bhuj expansion by Q3 FY27 |
| Q2 FY27 (Sep 2026) ★ | Investor release 4 Nov 2026, board outcomes | Latest quarter, merger, CEO change |

### Latest update highlights: Q2 FY27 (results 4 Nov 2026)

- **Sales up 40%, volume up 15%.** Revenue ₹149.5 cr. The gap between the two is mostly higher polymer prices passed on to customers. IBCs led the volume growth.
- **Profit up 22%** to ₹8.4 cr; operating profit (EBITDA) up 17% to ₹13.9 cr. Margin 9.3% vs 11.1% a year ago, as costs were passed through in rupees, not percentage.
- **Bhuj plant running.** Started 20 Aug 2026, ahead of the "by Q3 FY27" timeline given in August. About 1.5 lakh IBCs a year of capacity, expected to add about ₹100 cr of sales within three years.
- **Targets:** volume growth of about 15% a year, ROCE up 1.5-2 points a year, and a ₹5 cr solar project to save about ₹4 cr a year in power.
- **Leadership change.** CEO Jayesh Ashar leaves on 30 Nov 2026 for family reasons; director Mangesh Sarfare becomes CEO from 1 Dec. A new CFO, Sunil Vyas, took over on 1 Oct.

### 2c. Business mix & capacity

**Domestic vs export:** not broken out; the plants serve Indian chemical clusters (the parent handles overseas).
**Capacity utilisation:** not disclosed. Dahej is "operating at scale" and got an extra IBC line; Bhuj adds about 1.5 lakh IBCs a year.

### 3. Earning-trigger thesis

The driver is **IBC volume**: India's chemical makers are shifting to these reusable bulk containers, and TPL keeps adding plants next to the Gujarat clusters (Dahej, now Bhuj). Pricing passes polymer costs through, so profit grows with volume rather than with plastic prices. That's been working for years: profit up every year, debt down, returns rising. The big change is the merger. Once it closes, this growth shows up inside Time Technoplast's much larger numbers, and TPL shareholders' fortune follows TTL's stock.

| Trigger | What the company said | Evidence | Horizon | Strength |
|---|---|---|---|---|
| IBC volume + new plants | About 15% volume growth a year; Bhuj adds about ₹100 cr sales in 3 years | Volume +15% in Q2; Bhuj started early | Now to FY29 | Strong |
| Rising returns | ROCE up 1.5-2 points a year | 20.3% → 22.5% in FY26, 22.6% in H1 | Ongoing | Strong |
| Merger into TTL | 403 TTL shares per 1,000 TPL | Board approved; needs NCLT, exchange and shareholder nods | After approvals | Changes what you own |

### 3b. Trigger check

| Trigger type | Yes/No | What was said (date) |
|---|---|---|
| Debt cut | Yes | "Total debt was reduced by ₹26 Cr during the year" (AGM speech, 22 Sep 2026) |
| New business | No | Same products |
| Margin up | No | Margin fell in percentage terms; company stresses "margin stability" via pass-through |
| New management | Yes | New CEO Mangesh Sarfare from 1 Dec 2026; new CFO Sunil Vyas from 1 Oct 2026 |
| New capacity | Yes | Bhuj IBC plant "commenced operations" (20 Aug 2026); added IBC line at Dahej |
| Big orders | No | No order book disclosed |
| Turnaround | No | n/a |
| Promoter buying | No | Parent stake flat; the merger is a share swap, not buying |

**Single concrete driver:** rising IBC volumes from new plants next to Gujarat's chemical clusters, with the Bhuj plant started in August 2026.

### 3c. Margin bridge

Operating margin 9.3% now vs 11.1% a year ago. Polymer prices jumped with the West Asia tensions and were passed through, so sales rose much faster than costs in rupees; profit per container held up but the percentage fell. The company frames margin as stable by design. (one-off)

### 3d. Management changes

**CEO:** Jayesh Ashar (62) resigns from 30 Nov 2026, citing family commitments. **Mangesh Sarfare**, a non-executive director, takes over from 1 Dec for two years: an engineer with an operations MBA and three decades in projects, procurement and supply chain. He has signed the merger filings, so his job looks like running the integration into TTL. **CFO:** Pawan Agarwal left; Sunil Vyas from 1 Oct 2026. Two top changes in three months during a merger is worth watching, but the parent controls strategy either way.

## 4. Management consistency scorecard

| Period | What was promised | What happened | Verdict |
|---|---|---|---|
| FY25 → FY26 | ROCE up 1.5-2 points a year | 20.3% → 22.5% | Delivered |
| FY26 | Grow volume, cut debt | Volume +21%, debt down ₹26 cr | Delivered |
| Aug 2026 | Bhuj expansion running by Q3 FY27 | Started 20 Aug 2026, early | Delivered |
| Ongoing | About 15% volume growth | 12% in Q1, 15% in Q2 | Delivered |
| Ongoing | Margin stability via pass-through | Rupee profit up, margin % down | Partly |
| Ongoing | Solar power for 75% of needs | Repeated since Aug, no start yet | Too-early |

**Narrative drift:** very little. Every release since 2025 says the same thing: volume growth, cost pass-through, better returns, new Gujarat capacity. It mostly happened. The one turn is the merger, which ends TPL as a separate story.

## 5. Bottom line: two verdicts

**Durable earning trigger? → YES**

IBC volume growth from new Gujarat plants is concrete and showing in the numbers: profit up every year, returns rising, a new plant started early. The catch isn't the business but the wrapper: after the merger the trigger lives inside Time Technoplast, so judge it there.

**Management consistent? → YES**

Targets on returns, volume, debt and the Bhuj plant were met or beaten. No calls to test them on, but the written releases have been specific and the numbers match. The CEO and CFO swap during the merger is the one thing to keep an eye on.

## 6. Checkpoints for next quarter

- Volume growth holds near the 15% target
- Bhuj plant shows up in sales
- Merger moves ahead (exchange approval or NCLT filing)
