GE Vernova T&D India Ltd

Concall Tracker, Q2 2027 · NSE: GVT&D · BSE: 522275 · written 6 Nov 2026 · builds on our Q1-2027 report · source: company concall transcripts via Screener.in

Plain-word key. T&D: transmission and distribution, the kit that carries power from plants to cities. GIS: gas-insulated switchgear, compact high-voltage switching gear. HVDC: high-voltage direct current, used to move big blocks of power over long distances. TBCB: the auction route through which private developers win new power lines and then order equipment. RPT: related-party transaction, here orders from other GE Vernova group companies, which need shareholder approval above a size. L1: lowest bidder, usually the winner. EBITDA: operating profit before interest, tax and depreciation.

1. Snapshot

It makes the heavy electrical gear that carries power across the grid: big transformers, high-voltage switchgear and grid-control systems. Buyers are private grid developers, Power Grid and other utilities in India, plus GE Vernova group companies abroad.

Number	Value	What it means
Market value	₹1,03,162 cr	What the market says the whole company is worth (share ₹4,018).
Q2 FY27 revenue	₹2,030 cr	Jul-Sep 2026 sales, up 32% on last year. Another record quarter as factories work through the order pile.
Q2 FY27 EBITDA	₹550 cr (27.1%)	About ₹27 of operating profit on every ₹100 of sales. Back up from 25.1% in June, top end of the "mid-20s" guide.
Q2 FY27 profit after tax	₹430 cr	About ₹21 of every ₹100 of sales ends up as profit.
New orders, Q2 FY27	₹2,440 cr	Up 52% on last year. The June-quarter dip has reversed.
Order backlog	₹21,440 cr	Flat versus March. Still over three years of last year's sales, before the Barmer HVDC win is booked.
Cash	₹3,250 cr, no debt	₹1,010 cr of cash came in during the half.
Price-to-earnings	about 70	You pay about ₹70 for each ₹1 of yearly profit. Pricey. The market expects years of growth.

Quarter figures from management on the Q2 FY27 call (converted from billions: ₹1 billion = ₹100 cr). Market value and P/E from Screener.in.

2. Which calls were read

Quarter	Call date	How it was used
Q1 FY24 to Q4 FY26 (12 calls)	Aug 2023 to May 2026	Carried forward from our earlier reports
Q1 FY27	7 Aug 2026	The prior report's last call (its coverage boundary)
Q2 FY27	30 Oct 2026	Newly read in full ★

Only the Q2 FY27 call was read in full this time. The three-year backstory comes from the earlier reports.

★ Latest concall highlights: Q2 FY27 (30 Oct 2026)

- **Orders bounced back.** ₹2,440 cr of new orders, up 52%, after a weak June quarter. No one-offs: pumped-storage hydro, GIS for Andhra Pradesh lines, reactors for TBCB projects. Half-year orders are up 11%.
- **Barmer HVDC is coming.** They're the lowest bidder on Power Grid's Barmer HVDC job and expect to book it this quarter. CEO expects "minimum 2 to 3" more HVDC projects next year. HVDC revenue only starts in FY28.
- **A new long-range line from the CFO.** With the backlog plus Barmer, he said the company "can continue to similarly grow on average at more than 30%" for the next three years on just ₹1,000 cr of capex. That's the first multi-year number they've put out.
- **The big group export deal is gone for now.** The ~₹3,100 cr shareholder approval for Middle East and France orders lapsed because the customer kept the project on hold. A separate ~₹1,300 cr US data-centre transformer order is still "in discussion", hoped for in H2.
- **Tone:** confident and plain. Margin guidance (mid-20s for the year) kept. "Slight" price pressure in regular transformers. No HVDC tender since Barmer, so the Chinese-competition question is still untested.

Business mix & capacity. Exports were 32% of Q2 revenue and 21% of Q2 orders (31% and 29% for the half). Plain read: about two-thirds of sales are in India. Smaller export "flow" orders are growing well even without the big group deal. Utilisation: "pretty high" at most factories, above 75%. The ~₹1,000 cr expansion is about a fifth spent, mostly inside existing plants.

★ Since our last report

Builds on the Q1-2027 report (last call 7 Aug 2026). Prior verdicts: trigger YES, management YES.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	Three years of work booked, but new orders fell 30%	Orders +52%, revenue +32%, Barmer HVDC L1	Improving
Management: YES	Under-promises, owns the bad news early	Margin at top of guide; pipeline call from June came true	Confirmed
Order dip	Blamed a quiet auction quarter, said pipeline picked up from June	Pipeline turned into orders	Confirmed
~₹3,000 cr group export order	On hold, would need a fresh approval	Approval lapsed; no timeline	Broken
HVDC next leg	Slightly delayed	Barmer L1 won; 2-3 more expected next year	Improving
US data-centre order	Moved to Q2/Q3	Still in discussion, now H2	Slipping
Chinese GIS rivals	New risk, too early to judge	No HVDC tender yet; only slight price pressure	Untested

Verdict change: both unchanged at YES. The trigger is stronger than three months ago. The group-order problem is a repeat, but it's outside their control and they called it plainly.

★ 3. The earnings trigger

India's grid build-out is the engine, and it's still running. The company has over three years of work in hand, it's turning that into sales at better than 30% growth with fat margins, and orders came back this quarter. The next leg is HVDC. Barmer is about to be booked and more projects are expected next year, though that money only shows up in revenue from FY28. The parts that keep slipping are big one-off group orders and data centres, which are a small slice of the backlog.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Grid order boom	Domestic pipeline strong for the next 4-5 months; this year's orders stronger than last	Q2 orders +52%; backlog ₹21,440 cr	Now to 2030s	Strong	↑ orders bounced
Turning backlog into sales	Grow above 30% a year on average for three years	Revenue +32% in Q2, +35% in H1	Now to FY29	Strong	↑ now a stated target
Margin	Mid-20s EBITDA for FY27	27.1% in Q2, 26.2% for the half	Now	Strong	↑ back up from Q1
HVDC	Barmer to book this quarter; 2-3 more next year	L1 on Barmer	FY28 onward	Moderate to strong	↑ improving
Exports incl. group	Small orders growing; US data-centre deal hoped for H2	₹1,040 cr export orders in H1 vs ₹1,180 cr all of FY26; big group deal lapsed	Ongoing	Moderate	unchanged
Data centres	Real traction from Q4 or next year	Under 2% of backlog	Long	Early	unchanged

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24-FY26 (backstory)	Orders, revenue and margin targets	Beat on revenue (₹6,210 cr vs ₹5,500-6,000 cr guide) and margin (~27% vs mid-20s)	Delivered
Q2 FY26 onward	~₹3,000 cr group export order	Delayed, put on hold, approval now lapsed	Missed
Q1 FY27 (Aug 26)	Auction pipeline picked up from June, orders will recover	Q2 orders +52%	Delivered
Q1 FY27 (Aug 26)	Mid-20s EBITDA for FY27	26.2% in H1	Delivered
Q1 FY27 (Aug 26)	HVDC pipeline delayed but coming	Barmer L1, booking expected Q3	Delivered
Q1 FY27 (Aug 26)	US data-centre order in Q2/Q3	Still in discussion	Too-early
Capex ~₹1,000 cr	On schedule	About 20% spent; "on track"	On track

Narrative drift. None. It's still grid spending, execution and margins, said the same way every quarter. The one new thing is the CFO's three-year growth line. That's a bigger promise than they usually make, so it'll be the yardstick from now on. The repeat weak spot hasn't changed either: big group orders get announced early and then slip, and that's now happened twice with the same deal.

5. Bottom line

Durable earning trigger? → YES vs last quarter: unchanged (stronger)

What moved: orders came back hard and Barmer HVDC is about to land, which answers last quarter's yellow flag. Over three years of work is booked, sales are growing above 30% and margins are where they said. The risks are

price, not business: the stock trades at about 70 times earnings, and HVDC competition from new entrants hasn't been tested in a tender yet.

Management consistent? → YES vs last quarter: unchanged

They said the order dip was temporary, and it was. Margin came in at the top of the guide. They flagged the lapsed group approval in the deck before anyone asked. The group-order misses are a real blemish, but they depend on an outside customer. Watch whether the new "above 30% for three years" line holds up.
