Ratnaveer Precision Engineering Ltd (RATNAVEER)

Concall tracker, Q2 2027 (Jul-Sep 2026) · Gujarat maker of stainless steel fasteners, washers, clips, tubes and pipes, mostly exported, now building India's first copper clad laminate (CCL) plant for circuit boards.

1. Snapshot

Number	Value	Plain read
Market cap	₹3,112 cr	A small company by stock-market value.
Q2 sales	₹387 cr, up 35%	Its best quarter ever.
Q2 operating margin	About 9-11%	Typical for a stainless steel processor; thin, because steel prices set most of the selling price.
Q2 net profit	₹24 cr, up 56%	Profit grew faster than sales.
P/E	40.8	Investors already pay a lot for the CCL plan that hasn't started.
Promoter holding	38.7%, down from 55.5% two years ago	Fundraises (QIP, preferential, rights) diluted the founders' stake.

2. Concall coverage

Quarter	Date	Transcript read?
H1 FY26	10 Nov 2025	Yes
FY26	14 May 2026	Yes
H1 FY27	3 Nov 2026	Yes, in full ★

The company holds a call every six months, so three calls cover a year. The consistency read is limited to that.

Latest concall highlights — Q2 FY27 (3 Nov 2026)

- Record quarter: revenue ₹387 cr, up 35%, profit ₹24 cr, up 56%.
- CCL plant about 75% built; Chinese machines arrive mid-November, trial run from about 20 December, with 85% use of the first line targeted by April 2027.
- Lines two to five planned for June 2027, September 2027, January 2028 and April 2028. Approved under the government's electronics component scheme (ECMS).
- Management says CCL prices are up over three times on a shortage and promises a raised guidance 'very soon'. Some orders and long-term contracts said to be in hand.
- Base steel business on track for about ₹1,315 cr this year and ₹1,800 cr by FY28.

Business mix & capacity

- Domestic vs export: sells to 31 countries, mainly Europe, Asia Pacific and the Middle East; the exact split wasn't given in the call.
- Capacity: finishing line running near capacity; about ₹58 cr of steel capex this year. CCL is one line of five to start.

3. Earning trigger thesis

Two stories. The steel products business grows steadily on thin margins. The real trigger is copper clad laminate, the base sheet of every circuit board, which India currently imports entirely. If the first line starts in

December and the next four follow, sales could more than double by FY28 at much better margins, helped by the current shortage.

Trigger	What management said	Evidence so far	Time horizon	Strength
CCL plant	Complete by July 2026 (said Nov 2025)	Trial run now December 2026	FY28 for all five lines	Unproven: not producing yet, and late
Steel products growth	₹1,315 cr this year, ₹1,800 cr by FY28	Q2 sales up 35%	FY28	Moderate
CCL pricing	Prices up over three times	No sales yet	2027	Unproven

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Funding has come from QIP, preferential and rights issues.
New business	Yes	CCL for circuit boards, approved under ECMS, trial run December (Nov 2026).
Margin up	No	Margins steady at about 10-11%; higher margin depends on CCL.
New management	Yes	A Chinese CCL expert with 30 years' experience appointed Chief Technical Officer (Nov 2026).
New capacity	Yes	First CCL line: trial from about 20 Dec 2026, 85% by April 2027 (Nov 2026).
Big orders	No	Says some CCL orders and long-term contracts received but gave no detail; announcement promised.
Turnaround	No	Not applicable.
Promoter buying	No	Promoter stake fell to 38.7%.

The single concrete driver: India's first copper clad laminate plant, with the first line due to start trials in December 2026 and four more by April 2028.

3d. Management changes

A new Chief Technical Officer, a Chinese national with 30 years in CCL, will oversee installation, quality and product development, with 22 Chinese engineers arriving for setup.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Nov 2025	CCL project complete by July 2026	Trial run now about 20 Dec 2026	Missed
Nov 2025	EBITDA margin to 13.5%	About 9-11%	Missed
May 2026	About ₹1,350 cr sales this year	On track for about ₹1,315 cr	Partly
2025-26	Guidance of ₹2,500 cr top line by FY28	Repeated, now said to be raised soon	Too-early

The headline numbers keep moving: PAT margin targets of 9%, 10%, 11% and 13% have all been quoted, and a new guidance is promised every call. The tone is very promotional for a company whose new plant isn't running yet. The base business does deliver its growth.

5. Bottom line

Durable earning trigger? → MAYBE

CCL is a real gap in India and the plant is close, but nothing is produced yet, the timeline slipped about five months, and the margin claims rest on a shortage that may not last.

Management consistent? → MAYBE

The steel business delivers, but the CCL date slipped, margin targets were missed, and guidance changes almost every call. Promoter stake has been diluted heavily.

6. Checkpoints for next quarter

- First CCL line runs trial production in December
- CCL orders and long-term contracts are announced on the exchange
- Steel business keeps quarterly sales growth above a fifth
