ASK Automotive Ltd

Concall tracker, Q2 FY27 (filed under Q2-2027). Makes brake shoes, brake pads, aluminium die-cast parts and control cables, mostly for India's two-wheeler makers.

1. Snapshot

Number	Value	Plain read
Market cap	₹12,820 cr	What the whole company is worth on the market today.
Stock P/E	52	Buyers pay about 52 rupees for every rupee of yearly profit. That's pricey for an auto parts maker.
Sales, last 12 months	₹3,822 cr (Screener)	Up about a fifth on FY26. A chunk of that is costlier aluminium passed on to customers, not more parts sold.
Net profit, last 12 months	₹246 cr	Profit grew in line with sales, roughly a quarter up year on year in the latest half.
Return on capital (ROCE)	26%	For every 100 rupees tied up in the business it earns about 26 a year. Good for a factory business.
Borrowings (Sep 2026)	₹171 cr	Small next to its yearly operating profit. Debt has crept up to fund a heavy capex plan.
Promoter stake	74.95%	Promoters sold down from 85% to meet listing rules. No buying.

2. Concall coverage

Quarter	Call date	Transcript read?
Q4 FY24	May 2024	Yes (skimmed)
Q1 FY25	Aug 2024	Yes (skimmed)
Q2 FY25	Nov 2024	Yes (skimmed)
Q3 FY25	Jan 2025	Yes (skimmed)
Q4 FY25	14 May 2025	Yes
Q1 FY26	Aug 2025	Yes (skimmed)
Q2 FY26	31 Oct 2025	Yes
Q3 FY26	29 Jan 2026	Yes
Q4 FY26	20 May 2026	Yes
Q1 FY27	Aug 2026	Yes
Q2 FY27	4 Nov 2026	Yes, read in full ★

Eleven calls across two and a half years, from the first results after listing to the latest quarter. Note: the call quotes consolidated figures, which run higher than Screener's quarterly table; this report uses the call's figures for the quarter.

Latest concall highlights: Q2 FY27 (4 Nov 2026)

- Record quarter for sales, operating profit and profit. Net revenue (stripping out costlier aluminium and the closed wheel-assembly business) grew 29.5%, against 16.5% growth in two-wheeler production. So it's taking share.
- Full-year guidance stays at high-teens net revenue growth, raised from mid-teens back in August. Management says customers are bullish on the second half despite a tougher base after GST 2.0.
- High-pressure die-cast (HPDC) alloy wheels started regular supply to a Japanese two-wheeler maker on 3 Aug 2026. About ₹80 cr expected this year and orders worth about ₹240 cr next year from that one customer. Indian makers are still testing.
- Exports more than doubled to ₹70 cr in the quarter. Management says FY27 exports will cross its ₹180 cr target.

- 19th plant (brake friction material) is commissioned; the 20th, a fourth Bengaluru plant, starts around mid-January 2027. Capex budget is about ₹700 cr this year and ₹500 cr next.

Business mix & capacity

Domestic vs export: exports were about ₹109 cr in the first half, so roughly 7% of sales. India is almost everything, and Honda alone is about 35% of revenue. Aftermarket (spare parts sold to shops) is about 11%.

Capacity: the Bengaluru plants run at about 90% and are full. The Karoli (Rajasthan) plant was at about 65% in May 2026 and is filling with the alloy wheel line. New plants are being added because the old ones are full.

3. Earning trigger thesis

The earnings engine is simple: ASK keeps adding plants ahead of its two-wheeler customers and grabs a bigger share of their brakes and aluminium parts. On top of that sit three newer bets that are only now starting to bill: HPDC alloy wheels for two-wheelers (a first in India), exports including a Ford order, and a sunroof cable joint venture. The alloy wheel is the one that's actually shipping and has an order number attached for next year.

Trigger	What management said	Evidence so far	Time horizon	Strength
Share gains in brakes and aluminium parts	Will outgrow the two-wheeler industry, mid-teens then high-teens growth	Net revenue up 29.5% vs industry 16.5% this quarter; Bengaluru plant full	Ongoing	Strong. Shows up quarter after quarter
HPDC alloy wheels	₹80 cr this year, about ₹240 cr next year from the Japanese customer	Regular supply since 3 Aug 2026; Indian makers still testing	FY27 to FY28	Moderate. Started, but came two years late
Exports (incl. Ford)	₹180 cr in FY27, 20%+ yearly growth	H1 exports up 74%; Ford supply started; FY26 target was missed	FY27	Moderate
Sunroof cable JV	Supplies to start in H2 FY27	Plant audited by sunroof makers; no revenue yet, not updated this call	H2 FY27 onwards	Unproven

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	Debt is rising with capex; management says debt to equity stays near 0.5x (Nov 2026)
New business	Yes	HPDC alloy wheel supplies to a Japanese customer commenced 3 Aug 2026 (Nov 2026)
Margin up	No	Margin % lower due to pass-through alloy prices; adjusted margin about 13.5% (Nov 2026)
New management	No	Not mentioned
New capacity	Yes	19th plant commissioned; 20th plant in Bengaluru likely 14-15 Jan 2027 (Nov 2026)
Big orders	Yes	Alloy wheel orders up to about ₹240 cr next year from one customer (Nov 2026)
Turnaround	No	Not applicable
Promoter buying	No	Promoters sold to 74.95% for listing rules

The single concrete driver: New HPDC alloy wheel line now shipping to a Japanese two-wheeler maker, with next year's orders already lined up, on top of steady share gains from new brake plants.

3c. Margin bridge

Operating margin was 11.8% this quarter versus about 12.1% to 13.1% in recent quarters. Two reasons: aluminium prices shot up and are passed through to customers, which swells sales without adding profit (management says margin would be about 13.5% without it), and a roughly 35% minimum wage hike in Haryana raised contract labour costs. Management calls the aluminium part temporary and expects margins to hold or improve slightly in H2. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY25 (May 2024 call)	Margins up by 100 basis points	FY25 margin 12.3%, beat guidance	Delivered
FY25 to FY26	HPDC alloy wheels (Taiwan tech) in advanced testing, about ₹100 cr in H2	Taiwan route dropped, Japan tie-up in Mar 2025; supply only from Aug 2026	Missed (late)
FY26	Mid-teens growth excluding wheel assembly	9M FY26 net growth 18.6%; FY26 net revenue +20%	Delivered
FY26	Export growth target	"We could not achieve our target on the export front" (May 2026)	Missed
FY27	Wheel-assembly exit by 1 Apr 2026	Revenue from it is nil from April 2026	Delivered
H1 FY27	Alloy wheel supply in early H2; Bengaluru plant full	Supply from 3 Aug 2026; Bengaluru at 90%	Delivered
H2 FY27	Sunroof JV supplies in H2 FY27	Not updated on latest call	Too-early
FY27	Exports ₹180 cr, high-teens net growth	H1 tracking ahead on both	Too-early

The core story hasn't changed in two and a half years: add plants, outgrow the two-wheeler industry, keep margins steady. Management under-promises on growth and usually beats it, and it openly admits misses (exports in FY26). The weak spot is new products: the alloy wheel ran about two years late and switched technology partners, and the sunroof JV dates keep sliding into later halves. The chairman's tone is always upbeat, so the hard numbers matter more than the words.

5. Bottom line

Durable earning trigger? → YES

Share gains from new plants are visible every quarter, and the alloy wheel line is now shipping with a named order book for next year. The risk is that growth leans on a two-wheeler boom that management itself expects to slow to about 10% next year.

Management consistent? → MAYBE

Growth and margin guidance has been met or beaten, and the wheel-assembly exit went as planned. But new-product timelines slipped badly (alloy wheels) and exports missed last year, so the record is mixed on anything beyond the core brake business.

6. Checkpoints for next quarter

1. Twentieth plant in Bengaluru starts production in January 2027
2. Alloy wheel sales to the Japanese customer keep ramping toward the full-year number
3. First sunroof cable supplies start before year-end

This is not investment advice. Do your own due diligence.
