1 Snapshot

What the business does: Thyrocare is a *wholesale blood-testing factory*. It does not chase patients directly. Instead it runs two giant central laboratories (Mumbai and Delhi) plus a ring of regional labs, and sells cheap, high-volume testing capacity to other people's shopfronts — roughly 11,700 **franchisees** (small local pathology labs and collection points that stick a Thyrocare arrangement on top of their own business) and a **partnership** channel of online pharmacies, health-tech apps, insurers and corporates. Its flagship product is **Aarogyam**, a preventive-health package that bundles up to 70 tests into one cheap panel. A second, much smaller arm — **Nueclear Healthcare** — runs PET-CT centres (*PET-CT = a type of full-body scan used mostly in cancer care*); the board has now decided to sell it. The controlling shareholder is API Holdings, the parent of PharmEasy.

Measure	Value	What it means in plain words
Market cap	₹9,429 cr	What the whole company is worth on the stock market — a mid-cap.
FY26 revenue (consolidated)	₹829 cr	Total sales in the year to March 2026, up 21% on FY25's ₹687 cr.
FY26 net profit (consolidated)	₹163 cr	Profit after all costs and tax — up 81% from ₹91 cr. Nearly triple the ₹64 cr of FY23.
FY26 EBITDA margin	32%	<i>EBITDA = operating profit before interest, tax and depreciation.</i> 32 paise of operating profit per rupee of sales — up from 23% in FY23. Genuinely high for a testing business.
ROCE (FY26)	36%	Return on the capital employed in the business. Was 15% in FY23. This is the single most improved number here.
Net cash (Mar 26)	₹230 cr+	Cash and investments exceed borrowings. The company is debt-free and self-funding.
FY26 free cash flow	₹191 cr	Cash left after running and maintaining the business — more than the ₹163 cr of book profit. Profits are real cash, not paper.
Dividend payout	150%	It pays out more than it earns each year, funded by past cash. It does not need to retain money to grow.
Promoter holding	60.9%	API Holdings (PharmEasy). Down from 71.1% — a ~10% block was sold in late 2025 to repay parent-level debt.
Q1 FY27 revenue	₹240 cr	Consolidated, up 24.3% on a year earlier. Standalone ₹225.6 cr, up 26.1%.

Standalone vs consolidated — this matters here. Consolidated is materially larger and is the basis used throughout this report: FY26 revenue **₹829 cr consolidated vs ₹774 cr standalone**, profit **₹163 cr vs ₹149 cr**. The gap is the subsidiaries — Nueclear Healthcare (the PET-CT imaging arm being sold), Pulse Hitech, and the Tanzania operation. Screener's default screen shows standalone; the calls quote both. A 2-for-1 bonus issue in November 2025 **tripled the share count** (equity capital ₹53 cr → ₹159 cr), so all per-share figures before that date have been restated and look three times smaller than originally reported.

2 Concall coverage

Quarter	Call date	Transcript read?
Q3 FY23	Feb 2023	Yes
Q4 FY23	May 2023	Yes
Q1 FY24	Aug 2023	Yes
Q2 FY24	Nov 2023	Yes

Q3 FY24	1 Feb 2024	Yes
Q4 FY24	14 May 2024	Yes
Q1 FY25	23 Jul 2024	Yes
Q2 FY25	23 Oct 2024	Yes
Q3 FY25	23 Jan 2025	Yes
Q4 FY25	23 Apr 2025	Yes
Q1 FY26	23 Jul 2025	Yes
Q2 FY26	14 Oct 2025	Yes
Q3 FY26	28 Jan 2026	Yes
Q4 FY26	12 May 2026	Yes
Q1 FY27	23 Jul 2026	Yes — latest call, read in full ★

Coverage note — checked independently against Screener, not just taken from the download log. Fifteen consecutive transcripts covering three and a half years, from Q3 FY23 to the latest call. **There is no gap anywhere in this window** — every concall row Screener lists from February 2023 onward carries a genuine transcript link, and every one of them was downloaded and read. Screener's document list runs further back, to December 2017, and ten older rows (three in 2019, three in 2020, three in 2021, one in February 2022) were not retrieved by the scraper; they sit outside the three-year analysis window and are not used here. Thyrocare has held a call every quarter without fail — unusually disciplined disclosure. Note the Q4 FY26 call was postponed at short notice from its original date because the board meeting overran.

★ Latest concall highlights — Q1 FY27 (call held 23 July 2026)

- **The best quarter the company has ever reported, and it was driven by the core business.** Consolidated revenue ₹240 cr, up 24.3%; standalone ₹225.6 cr, up 26.1%. EBITDA margin 32.2% with EBITDA up 34%. Profit after tax ₹51.3 cr, also up 34%. The core pathology business grew **26%** — faster than the 20% it managed across the whole of FY26. This is the **eighth consecutive quarter of roughly 20%+ EBITDA growth** against an industry growing about 10–11%.
- **The imaging arm is being put up for sale.** The board has approved divesting Nuclear, the PET-CT scan business. The CEO's reasoning was blunt: *"The nuclear business has not been growing. And we also have not been investing in the nuclear business."* The numbers justify it — roughly **₹140 cr of capital tied up producing about ₹6 cr of profit for the full year**, a return of about 4%. He expects the process to take at least six months and there is **no buyer identified yet**.
- **The franchise engine keeps accelerating.** Active franchisees reached **11,700**, an all-time high and a fourfold increase from the 2,700 left when API Holdings took over in 2021. **900 were added in this quarter alone** against a stated run-rate of 500. The lab network is 43 in India plus one in Tanzania, up from 17 labs in FY21, and the test menu has grown roughly fivefold to 1,375 tests.
- **Average price per test finally moved up — but through mix, not price rises.** Revenue per vial in the franchise channel grew 7% and crossed ₹250 after being stuck near ₹240 for several quarters. The cause is what patients now order: thyroid tests were 20% of the mix four years ago and are *"low single digits"* today, replaced by lipid profiles, biochemistry markers and PCR-based tests. Management again confirmed it is **not raising list prices**, and openly admitted it discounts add-on tests: *"you will see some price erosion because we discount the incremental tests."*
- **Specialty diagnostics went commercially live, and guidance was not raised despite the 24% quarter.** Allergy testing and genomics are now selling, but specialty is *"not even 1%"* of the 55 million tests done; management called FY27 *"a zero year for specialty"* while targeting 15–20% of the portfolio in three to five years. Asked three separate times to lift full-year guidance after a 24% quarter, the CEO refused: *"it's too early for me to revise guidance... I will still hold the mid to high teens guidance at this point in time."*

Business mix & capacity. Pathology is essentially the whole company — roughly 94% of consolidated revenue, and the gap is widening: in FY26 pathology grew 22% while radiology (imaging) *shrank* 6%, and in Q1 FY27 imaging fell another 4% year-on-year as loss-making centres were closed. That is why it is being sold. **By channel, franchisees are**

about two-thirds of sales and the partnership/B2B channel about one-third — in Q1 FY27 franchise revenue grew 27% and partnerships 26%, so both engines are firing at the same speed for the first time in three years. **Geographically the business is deliberately small-town: about 20% metro and Tier-1, 80% Tier-2 and beyond**; historic weakness in the North and South was bought away with the Polo Labs (Punjab/Haryana/Himachal) and Vimta (Andhra/Telangana) acquisitions. **Capacity is not the constraint — average lab utilisation is only about 65%**, and the two central labs alone can process 130,000 samples a day, so volume can roughly double before new plant is needed. Capex reflects that: only about ₹35 cr capitalised in FY26 against ₹213 cr of operating cash, with FY27 guided at roughly ₹40 cr. **International is negligible and still loss-making** — one lab in Tanzania, revenue around ₹3 cr a year, growing fast in percentage terms but losing under ₹1 cr a quarter and still not at breakeven after 18 months. **The real bottleneck is people, not machines**: management says it is "resourced for 500 [franchisee additions] a quarter" and the limit is "our ability to onboard and scale up the franchisees".

★ 3. Earning-trigger thesis

The trigger is a **volume machine, not a pricing machine**, and management has been unusually honest that this is the case. Thyrocare signs up small local pathology labs as franchisees, gives them cheap wholesale testing rates on a performance-based sliding scale, and lets their volume ride over a central lab that is only two-thirds full. Because the labs are already built and paid for, almost every extra rupee of revenue drops through: EBITDA margin has gone from **23% in FY23 to 32% in FY26** and return on capital from **15% to 36%** over the same three years, with essentially no debt and only ₹35 cr of annual capex. Franchisees have gone from 2,700 in FY21 to 11,700 today and tests from 147 million in FY24 to 210 million in FY26. **What is not the trigger is price**. Management has said in every single call for three years that it will not raise prices — the thyroid list price is unchanged in a decade — and it has repeatedly cut prices deliberately to buy volume. The bull case now rests on whether the mix shift into higher-value tests can lift the blended price received while volume keeps compounding. Q1 FY27 was the first quarter that clearly worked.

Trigger	What management said	Evidence so far	Horizon	Strength
Franchise network expansion	"We are resourced for 500 a quarter"; against a 1,200 target "we are now comfortably achieving 1,500."	Delivered and then some. 2,700 (FY21) → 7,900 (FY24) → 10,800 (FY26) → 11,700 with 900 added in Q1 FY27. Claimed addressable base is ~150,000 collection points, so penetration is under 8%.	Ongoing 3–5 yrs	Strong The most reliably delivered promise in the whole record.
Partnership / B2B channel	Be "the B2B partner of choice to all front-end diagnostic services companies in India"; partnerships to grow ~1.5x the franchise business.	Delivered every quarter for three years — +23% to +39% throughout, now ~1/3 of revenue. Insurance grew 45% in FY26. One software integration reaches 400 cities.	Ongoing	Strong Consistently the fastest-growing channel.
Operating leverage	"Any operating leverage I get, I invest back in growth"; FY26's margin "is the base" for FY27, no expansion promised.	Fully delivered: 23% (FY23) → 26% → 30% → 32% (FY26) → 32.2% (Q1 FY27). But it is now explicitly capped by management's own choice to spend it.	Achieved	Moderate Real, but the easy gains are banked. Don't model more.

Realisation / mix upgrade	"We have no intention at this point in time to increase prices." Growth to be "75% volume, 25% mix." Promised a concrete revenue-per-test number "in one or two quarters."	Mixed, and the weak link. The full arc: FY23 volume +39% on value +22% (price per sample <i>down</i> ~12%); Q2 FY24 value +20% on volume +8% (up ~12%, but only because volume collapsed); ₹33.8 → ₹37.8 by Q1 FY26; then <i>down</i> to ₹35.9 in Q3 FY26 after heavy discounting of sugar and biochemistry tests; then +7% per vial in Q1 FY27, crossing ₹250. Four direction changes in four years. The promised concrete number was still not given.	1–3 yrs	Weak Price is conceded, not defended. Only one good quarter so far.
Specialty (allergy, genomics)	Peers run 15–20% specialty; "our ambition would be to reach the same levels in the three to five year timeline." FY27 is "a zero year."	Commercially live in Q1 FY27 — Phadia allergy platform, 250+ SKUs, NIPT prenatal testing. But under 1% of tests, no revenue disclosed, and deliberately priced below the market.	3–5 yrs	Too early Credible plan, capex already spent, zero results yet.
Exiting imaging	Board approved divesting Nuclear; process "at least 6 months"; no buyer identified.	Frees ~₹140 cr of capital currently earning ~₹6 cr a year (about 4%) and removes a shrinking, capital-heavy drag from a 36%-ROCE business.	6–12 mths	Moderate Right call, clearly argued — but announced, not done.

4 Management consistency scorecard

The record splits cleanly into two eras, and reading them as one average would be misleading. Through FY23 and FY24 — the trough years, just after the COVID testing collapse and a change of chief executive — management missed almost everything it forecast. From FY25 onward it has beaten almost everything. The turn is real and it is visible in the table below.

Era 1 — FY23 to FY24: a cluster of misses.

Period	What was promised	What actually happened	Verdict
Q4 FY23 (May 23)	Africa entry: ₹20 cr of spend, "three geographies and it would be 3 labs" during FY24.	Shrank to one country, one lab — Tanzania — with ₹10 cr. Middle East downgraded to "evaluating," South-East Asia "on the back burner." Opening then slipped a full year.	Missed
Q4 FY23 (May 23)	FY24 capex "in the range of ₹40 crores"; "we don't foresee very large capex."	H1 FY24 <i>alone</i> was ₹46–47 cr, with another ₹20 cr guided for H2 — roughly ₹66 cr, and ₹30 cr of new term debt taken on. A 65% overshoot.	Missed
Q1 FY24 (Aug 23)	FY24 revenue growth "would probably land you at about 12% and 14% overall"; EBITDA margin "in that range, plus minus 1%" (≈30–32%).	FY24 consolidated revenue grew 9% . Margin guidance was cut to 28–30% within one quarter, then to 29–30%, and FY24 finally landed at 28% normalised / 24% reported. Both legs missed.	Missed
Q2 FY24 (Oct 23)	Nuclear imaging to be "at a healthy profitable level once we cross ₹12 crores a quarter," expected "by the first half of '25."	Never happened. Imaging margin stayed stuck at 8–9%, revenue shrank 6% in FY26, and the business is now being sold instead.	Missed

Q3–Q4 FY24	"The franchisee business should return back with high teens growth rate" — said twice.	Franchise growth came in at 11%, 13%, 12%, 14%. By Q1 FY25 the bar had been quietly reset to "low double digits to mid-teens," and restated as if it had always been the guidance.	Missed + drift
Q2 FY24 (Oct 23)	"I think we will peak out at about 10,000" franchisees.	Beaten decisively — 11,700 today and still adding 900 a quarter. Management underestimated its own best asset.	Beat

Era 2 — FY25 to date: a run of beats.

Period	What was promised	What actually happened	Verdict
Q4 FY24 (May 24)	FY25 revenue growth "between 15% and 18%."	FY25 consolidated revenue grew 20% to ₹687 cr, with profit up 45% before exceptional items.	Beat
Q4 FY25 (Apr 25)	FY26 "mid-teens growth with stable margins" at ~31%; "upwards of 1,500 new franchise partners."	FY26 revenue grew 21% to ₹829 cr, margin came in at 32–34%, and roughly 1,400–1,500 franchisees were added. Every leg beaten or met.	Beat
Q2 FY26 (Oct 25)	"Margin to dip a bit in Q3 and pick up in Q4."	Exactly that: Q3 FY26 margin 32%, Q4 FY26 34%. A precise short-term call, precisely delivered.	Delivered
Q2 FY26 (Oct 25)	Weight-loss drugs (GLP-1) would be "a huge opportunity"; complementary test packages being launched.	One quarter later, unprompted: <i>"I stand corrected on that one. We haven't seen the uptick that we thought we would see on GLP."</i> Dropped from the story since.	Missed — but owned
Q2 FY26 (Oct 25)	Tanzania to "double revenues this year" and reach operating breakeven in 18–24 months.	FY26 growth was 75%, not 100%. Breakeven has been "12 to 18 months away" in three consecutive calls, and by Q4 FY26 management conceded: "we've been in Tanzania now about 18 months odd and we still haven't broken even."	Slipping
Q2 FY26 (Oct 25)	Reach Six Sigma quality — under 3.4 complaints per million tests.	Hit early and held: 3.2 (Q3 FY26), 3.06 (Q4 FY26), 3.1 (Q1 FY27). Turnaround time also cut from 40 hours to under 18.	Delivered early
Q4 FY26 (May 26)	FY27 "mid- to high teens" growth, 75% of it from volume, no price increases; 500 franchisee adds a quarter; FY26 margin to be held flat.	Q1 FY27 delivered 24% growth, 900 franchisee adds and a 32.2% margin. Running ahead of guidance on every count — and guidance was still not raised.	Ahead
Q4 FY26 (May 26)	Two specific commitments: the new consumables business "will become clear to you by June or July," and a concrete revenue-per-test number "in one or two quarters."	Neither arrived. In Q1 FY27 the consumables announcement was pushed to September, and no revenue-per-test figure was given. Small promises, but both missed.	Slipping
FY25 → FY27	On imaging: "We will maintain the centers that are there"; no divestment contemplated; expect "single digit" growth.	Reversed. By Q1 FY27 the board had approved selling the business outright. The reversal was well argued on returns — but it is a reversal.	Pivot (justified)

Narrative drift. The core story has not moved in three and a half years: be the cheapest high-quality wholesale testing partner, grow by adding franchisees rather than by raising prices, and let a half-empty central lab turn volume into margin. Every call repeats it, and the numbers have followed it. What changed between the two eras above was not the strategy but the **calibration** — in FY23–FY24 management forecast what it hoped for and missed; from FY25 it began forecasting below what it expected and beating. The genuinely unusual behaviour now is on the upside: after quarters of 20%, 22%, 23% and now 24% growth against "mid-teens" guidance, it has refused to raise that guidance at least four separate times, saying each

time it would wait for the first half to play out. Companies that over-deliver usually take credit; this one keeps insisting the base is high and the industry only grows 10–11%. The same instinct showed when they *restated their own test count downwards* in Q1 FY27, stripping out calculated parameters that were never billed — a change that made their own volume growth look worse, made voluntarily. Where drift does exist it is at the edges and it is real: the franchise growth bar was quietly lowered in FY25 and then described as unchanged; Tanzania's breakeven has rolled forward three times and Africa shrank from three countries to one; and the list of new adjacencies keeps growing — Think Health, Polo, Vimta, SyncHealth, Tanzania, GLP-1 packages, allergy, genomics, and now branded consumables. GLP-1 has already misfired. That is a lot of shots on goal for a company whose actual engine is signing up small labs, and it is the thing most worth watching from here.

5 Bottom line — two verdicts

Durable earning trigger? → YES

This is one of the cleaner earning triggers you will find, and the evidence is three years deep rather than one quarter thick. The mechanism is simple and verifiable: sign up small local labs, feed their volume through central laboratories that are only about 65% full, and let the fixed-cost base do the rest. Franchisees have gone from 2,700 to 11,700, tests from 147 million to 210 million, EBITDA margin from 23% to 32% and return on capital from 15% to 36% — all while carrying no debt, spending only ~₹35 cr a year on capex, generating ₹191 cr of free cash flow and paying out more than it earns in dividends. There is real headroom left: penetration of the ~150,000 addressable collection points is under 8%, utilisation leaves room for volume to nearly double before new plant is needed, and the imaging arm that dragged on returns is on its way out. **The honest caveat is that this is a volume trigger, and price is a concession, not a defence.** Management will not raise list prices — the thyroid rate has not changed in ten years — and has twice cut prices deliberately to buy volume, which pushed revenue per test down from ₹37.8 to ₹35.9 during FY26. Q1 FY27's 7% rise in revenue per vial is the first evidence that mix can lift the blended price, and it is one quarter old. The specialty push that is supposed to make that structural is, by management's own description, at "zero year." So: the engine is proven, the runway is real, but anyone modelling price-led earnings growth here is modelling something the company has explicitly said it will not do.

Management consistent? → YES

But only on the strength of the last three years, and you should know what the first two looked like. Reading all fifteen calls in order, FY23–FY24 was a poor run: FY24 revenue was guided at 12–14% and came in at 9%; the FY24 margin guide was cut twice and still missed; capex guided at ₹40 cr ran to roughly ₹66 cr and pulled in ₹30 cr of new debt; the Africa plan shrank from three countries and three labs to one of each; and the promise that imaging would turn "healthily profitable by the first half of FY25" was never met — that business is now being sold. Anyone who trusted the FY24 guidance was let down repeatedly. From FY25 the record inverts and stays inverted. FY25 was guided at 15–18% and delivered 20%; FY26 was guided at mid-teens with a 31% margin and delivered 21% with 32–34%; the 1,500-a-year franchisee target was met; a precise call that margins would dip in Q3 FY26 and recover in Q4 landed exactly; the Six Sigma quality target was hit early and held. Q1 FY27 is running ahead of guidance on growth, franchisee additions and margin simultaneously — and they still would not raise the number when pressed three times. Just as telling is how they handle being wrong *now*: the GLP-1 opportunity was hyped in one call and retracted in the next with an unprompted "I stand corrected"; the test-count definition was restated downwards voluntarily, making their own volume growth look weaker; the imaging reversal was argued openly on the arithmetic — ₹140 cr of capital producing ₹6 cr of profit — rather than dressed up as strategy. Blemishes remain: Tanzania's breakeven has slipped three times, and two specific Q4 FY26 commitments (the consumables announcement and a concrete revenue-per-test number) both went unmet in Q1 FY27. The verdict is Yes because twelve of the last fifteen calls show a management that forecasts below what it expects, delivers above it, and says so plainly when it gets something wrong — but it is a Yes earned recently, not a Yes that was always there.

Sources: Fifteen consecutive Thyrocare Technologies Ltd earnings-call transcripts filed with BSE/NSE, Q3 FY23 (Feb 2023) through Q1 FY27 (call held 23 July 2026, transcript filed 27 July 2026), sourced from Screener.in; Screener.in consolidated and standalone financial history (profit & loss, balance sheet, cash flow, ratios, quarterly results, shareholding).

A note on the numbers: figures in this report are *consolidated* unless stated. Management quotes both bases on the calls; the difference is Nuclear Healthcare, Pulse Hitech and Tanzania. For Q1 FY27 that is ₹240 cr consolidated against ₹225.6 cr standalone, and ₹51.3 cr of profit. Per-share figures reflect the November 2025 bonus issue, which tripled the share count.
