Venus Remedies Ltd

Concall Tracker · Q2 FY2027 (quarter ended 30 Sep 2026) · NSE: VENUSREM · BSE: 526953 · Report prepared 7 Nov 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public filings and news. This company holds no earnings calls. This report continues from our Q1-2027 report.

1. Snapshot

What it does: Venus makes injectable medicines, mainly antibiotics for hard-to-treat infections and cancer drugs, at Baddi (Himachal) and Panchkula. About seven-tenths of sales are exports, backed by over a thousand country marketing approvals in 80+ countries. It also runs its own antibiotic research arm.

Measure	Value	Plain read
Market cap	₹1,935 cr	Down from ₹2,138 cr at our last report even as profits rose.
P/E	~16	About 16 years of current profit. Modest for a pharma exporter growing this fast.
Q2 FY27 revenue (consolidated)	₹218.8 cr (+13.6%)	Up on last year and up 22% on Q1's ₹178.9 cr.
Operating margin (standalone)	~21% (Q1: 20%, last year: 15%)	Held the higher level reached in Q1, on almost no other income.
Q2 net profit (consolidated)	₹25.7 cr (+27%)	Standalone profit is about ₹29 cr, so the overseas arms still lose roughly ₹3 cr a quarter.
H1 consolidated profit	₹48.6 cr (vs ₹29.7 cr)	Up about two-thirds on the first half of last year.
Debt	Nil	No borrowings.

2. Coverage: sources used

No concall transcripts were available on Screener — this report is based on a global web deep-dive. Venus holds no earnings calls; none was announced on NSE for Q2 FY27, and none was found on its site. Sources: (1) Unaudited standalone and consolidated results with limited-review reports, filed 26 Oct 2026 (NSE); (2) company newsroom, times.venusremedies.com (items of 1 Sep, 29 Sep, 31 Oct 2026); (3) Univest and Arthneeti result summaries (26-27 Oct 2026), cross-checked to the filing; (4) Screener quarterly data; (5) the Q1-2027 report for backstory.

★ Latest update highlights — Q2 FY27 (results 26 Oct 2026)

- **Results:** consolidated revenue ₹218.8 cr (+13.6%), profit ₹25.7 cr (+27%). The margin held around 21%, so Q1's step-up wasn't a one-off.
- **Approvals keep coming:** Gemcitabine (a cancer drug) approved in Georgia (1 Sep); six marketing authorisations in Africa and Latin America (29 Sep); registrations in six more countries including its first in Kazakhstan (31 Oct).
- **German arm still unresolved:** ₹28.6 cr of share application money sits in Venus Pharma GmbH with no shares allotted; auditors flagged it again. Management has now hired a German financial consultancy to advise on the restructuring.
- **Business development:** over 250 meetings at CPHI Milan, with "new partnerships" claimed but not named.
- **Higher depreciation** (₹9 cr vs ₹7 cr in Q1) points to new equipment coming into use; no capacity figure disclosed.

Business mix & capacity. Exports roughly 70% / domestic 30% (company's own long-standing figure; not restated this quarter). Capacity utilisation is not disclosed.

★ Since our last report (builds on the Q1-2027 report, results of 20 Jul 2026)

Prior verdicts: **Trigger YES · Consistency YES.**

Prior read	What we said then	What the new filings show	Movement
Trigger: specialty injectables + approvals	Margin step-up was real	Margin held ~21%; approvals in 13 more countries	Confirmed
Consistency	Delivers, with a German blemish	Same: steady delivery, German issue still open	Confirmed
Approvals pace / capacity spend	Six in July, capex under way	Six in Sept, six more in Oct; depreciation rising	On-track
German arm and VRP-034 trial	Cash going into a loss-maker; trial stuck	Consultancy hired; losses continue; no trial news	Slipping

Checkpoint results: Delivered I Partly (approvals kept landing; German restructuring has started but losses continue and the trial is still silent).

Verdict change: both unchanged.

★ 3. Earning-trigger thesis

Venus is moving from cheap generic antibiotics to cancer and specialty injectables that sell for more, and switching on its huge bank of foreign approvals country by country. Fixed costs are high, so extra sales fall to profit: margin went from about 13% a year ago to about 21% now and stayed there for two quarters. The open questions are the same as before: approvals arrive on foreign regulators' timing, the German subsidiary keeps losing money, and the novel antibiotic VRP-034 earns nothing.

Trigger	What the company said	Evidence so far	Horizon	Strength	Change since last report
Specialty / oncology mix	Moving up the value chain	Margin held ~21% two quarters running	Now	Strong	↑
New country approvals	Global expansion	13 new approvals Sep-Oct, first in Kazakhstan	Ongoing	Strong	Unchanged
European restructuring	Fix during FY27	Consultancy hired; still loss-making	FY27	Weak	Unchanged
VRP-034 novel antibiotic	Phase I planned	No update	Years	Unproven	↓

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Already debt-free
New business	Yes	"New product registrations ... in six countries, including its first in Kazakhstan" (31 Oct 2026); six authorisations in Africa and Latin America (29 Sep 2026)
Margin up	No	No company statement; margin held rather than rose
New management	No	Not in the filings
New capacity	No	No capacity statement this quarter

Big orders	No	Not disclosed
Turnaround	No	Not applicable
Promoter buying	No	Not in the filings

Single concrete driver: new country approvals for its cancer and specialty injectables, sold at better prices than its old generic antibiotics.

3c. Margin bridge

Standalone operating margin about 21% against 15% a year ago and 20% in Q1. The company gives no bridge, but other income was near zero, so it's the business, not one-offs: richer product mix and fixed costs spread over more sales. Two quarters in a row now. (lasting)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Multi-year	Deleverage, export, move up the value chain	Debt-free, exports ~70%, margin up	Delivered
FY26-27	Keep adding country approvals	Steady stream every month	Delivered
FY27	Restructure European operations	Consultancy hired; not done	Too-early
FY26	Start VRP-034 Phase I trial	No public progress	Missed (so far)

Narrative drift. None. The newsroom keeps telling the same story and the numbers back it. The weakness is that everything comes in documents the company writes itself; no one gets to ask about the German money or the trial.

5. Bottom line

Durable earning trigger? → YES vs last quarter: unchanged

The margin held for a second quarter and approvals keep piling up. That's the trigger working. The cheap valuation partly reflects the no-call, no-guidance style and the German issue.

Management consistent? → YES vs last quarter: unchanged

Delivering on what it says, with the same asterisk: the European fix has a deadline (this year) that hasn't been tested yet, and the trial has gone quiet.

★ 6. Checkpoints for next quarter

- Operating margin stays around 20% or better
- Share allotment or a restructuring plan for Venus Pharma GmbH is announced
- More country approvals keep landing for cancer and specialty injectables
