TD Power Systems Ltd

Concall Tracker, Q1-2027 update | Screener ticker: TDPOWERSYS | Prepared 6 Nov 2026 | Coverage capped at calls held by 30 Sep 2026 | Builds on the Q4-2026 report

1. Snapshot

What it does: TD Power makes large electric generators, the machines that sit next to a gas turbine, gas engine, steam turbine or hydro turbine and turn spin into electricity. It also makes big industrial motors. Most sales go abroad to turbine and engine makers, who ship the finished set worldwide.

₹18,536 cr
Market value. A mid-sized company the market prices for a lot of growth.

₹643 cr
Q1 FY27 sales (Apr-Jun 2026, consolidated). Up 71% on ₹376 cr a year ago.

₹86 cr
Q1 net profit (consolidated, incl. other comprehensive income). Up 72%.

19.3%
Q1 operating margin (standalone, incl. other income). Inside the 18-19% band management guides to.

₹2,208 cr
Manufacturing order book. Up from ₹1,973 cr in March. More than a year of last year's sales.

~72x
Price-to-earnings. Very expensive. Promoters hold only about 27%, down from ~58% in 2023.

2. Concall coverage

Quarter	Date	Read?
Q2 FY20 → Q3 FY26 (selected calls)	Nov 2019 - Jan 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	15 May 2026	Read in the Q4-2026 report
Q1 FY27	12 Aug 2026	Newly deep-read in full ★

Only the Q1 FY27 call was read in full. The history comes from the Q4-2026 report. One exchange filing after the call (the Siemens Energy agreement, August 2026) is noted from press reports. An order announced on 1 Oct 2026 falls outside this report's window.

2b. Latest concall highlights: Q1 FY27 (call held 12 Aug 2026)

- **Another big jump.** Standalone income ₹630 cr (up 74%), profit ₹85 cr (up 81%). Consolidated sales ₹643 cr (up 71%). Cash ₹240 cr, no debt.
- **Guidance raised again.** FY27 sales target now ₹2,600 cr, up from ₹2,400 cr in May, "with a small chance" of more. Plain read: the FY27 target has now gone up three times, from ₹1,900-2,000 cr first set in 2025.
- **Orders poured in.** New orders ₹734 cr in the quarter, up 87%. Exports were 93% of them. Management expects about ₹700 cr of orders a quarter, ₹2,800 cr+ for the year.
- **Capacity plan.** ₹50 cr of debottlenecking gets capacity to roughly ₹3,200 cr of sales in FY28. A bigger expansion toward ₹4,000 cr+ for FY29-30 will be detailed on the next call. A large-generator (above 100 MW) deal was "close to signing". In August the company reportedly signed a 10-year agreement to build 2-pole generators to Siemens Energy's designs.
- **Railways being wound down.** No fresh railway orders. They'll review whether the segment is worth keeping at year-end. Tone: very confident and a bit curt with analysts. "Demand is extraordinarily strong" was the line.

2c. Business mix & capacity

Mix: exports plus deemed exports are 57% of the order book (excluding railways) and 93% of this quarter's new orders. Plain read: almost all new business comes from abroad, mostly US gas-power and data-centre demand. **Capacity:** the third plant opened Dec 2025. Current capacity with small fixes supports about ₹3,200 cr of sales in FY28. Plain read: room for this year and next, and a bigger build is being planned. Headcount is scaling from about 1,750 to 2,600.

2d. Since our last report

Builds on the **Q4-2026 report** (boundary call 15 May 2026). Prior verdicts: **trigger YES**, **consistency YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	Global power shortage drives generator demand.	Sales up 71%, orders up 87%, guide raised.	Confirmed
Consistency: YES	Keeps beating and raising its own guide.	Raised again, ₹2,400 cr → ₹2,600 cr.	Confirmed
Large generators (up to 200 MW)	Capex numbers "in 2-3 months".	Not given. Deal "close", to be announced. Siemens Energy framework reported in August.	Improving, still vague
Export traction motors	Early but real new leg.	No new railway orders. Segment under review.	Slipping
Turkey	Being wound down.	€3-3.5m of work this year, kept as a service backup.	As expected
Margin	Turkey penalty dented Q4.	Back at 19.3%, inside the band.	Confirmed

Verdict change: both unchanged. The core trigger got stronger. The railway retreat is a second side-bet dropped (Indian Railways first, now export traction looks shaky), but it was never the main story.

3. Earning Trigger thesis

The world is short of power equipment, and every gas turbine or engine needs a generator. US data centres, grid stability and oil-and-gas work keep TD Power's turbine-maker customers busy. Those customers have taken non-refundable advances from their own buyers, which is why management trusts the demand. On top of that sits a possible move into much larger generators.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Gas turbine / engine generators	Growth "massive", rolls on "without pause".	Q1 export orders ₹684 cr vs ₹257 cr. Guide raised.	Live	Strong	↑ Improving
Hydro & refurbishment	One of the highest hydro years ever.	Refurbishment orders won in Q1, more in pipeline.	Live	Strong	Unchanged
Large generators (100-200 MW)	Deal close. Takes 18-20 months to make one. Not in FY27 numbers.	Siemens Energy 10-year build-to-print framework reported (Aug 2026).	FY28+	Moderate, unproven	↑ Improving
Capacity to ₹4,000 cr+	Plan due next call.	₹3,200 cr FY28 path funded with ₹50 cr.	FY29-30	Moderate	New
Export traction motors	No fresh orders, review at year-end.	Existing orders only.	-	Weak	↓ Weakening

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
FY23	~17.5% compounded growth	~28% a year FY23-FY26	Delivered (beat)
FY25	~₹1,200 cr	₹1,302 cr	Delivered (beat)
FY26	~₹1,500 cr, raised several times	₹1,878 cr	Delivered (beat)
FY27	₹2,200 → ₹2,400 → ₹2,600 cr	Q1 ₹643 cr, a pace near ₹2,600 cr	On track
Margin 18-19%	Hold band	Q1 19.3%	Delivered
Large-generator capex	Numbers "in 2-3 months" (May)	Deferred to next call. Deal still unannounced	Delayed
Railways	Indian Railways, then export traction	Indian Railways stalled. Export traction now under review	Dropped (twice)

Narrative drift: the core story is the same as six years ago and keeps getting delivered. The side-stories keep falling away: Turkey, Indian Railways, and now railway traction. The large-generator plan is the new big promise, and it's still light on detail three months after it was first raised. The MD's tone was sharper than usual, brushing off several analyst questions. Not a red flag by itself, but he's asking investors to wait on the biggest open item.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: unchanged

Stronger than last time. Orders, sales and guidance all moved up, and customers' non-refundable advances give the demand real weight. The large-generator move could add a second leg from FY28 if it's confirmed. The risk is how long US data-centre and gas-power spending lasts. Management says the backlog is solid.

Management consistent? → YES vs last quarter: unchanged

On the numbers that matter they keep promising, delivering and raising. The marks against them are on the edges: side-bets dropped one after another, and the large-generator plan running late on detail. Promoters have also sold down heavily over three years. That doesn't change the operating record, but it's worth keeping in mind with the stock this expensive.
