Raghav Productivity Enhancers Ltd

Concall Tracker · Q2 FY2027 (quarter ended 30 September 2026) · NSE: RPEL · BSE: 539837 · formerly Raghav Ramming Mass Ltd · Report prepared 6 Nov 2026 · Continuity update to the Q1-2027 report

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public filings, press releases and financials. This company holds no question-and-answer earnings call (see Section 2).

1. Snapshot

What the business does: Raghav is the world's largest maker of silica ramming mass, the heat-resistant sand-and-chemical lining packed inside an induction furnace (an electric furnace that melts scrap steel). The lining burns out and gets replaced every few weeks, so every steel plant, foundry and casting unit running one is a repeat buyer. Raghav sells a premium, longer-lasting, custom-fitted version and charges more for it. Plants are in Jaipur, Rajasthan.

Measure (consolidated)	Value	What it means in plain words
Market cap	₹8,110 cr	What the company is worth on the market. Share ≈ ₹1,781, up from ₹1,246 at our last report, so the stock rose about 43% in three months.
Q2 FY27 revenue	₹92.8 cr	Sales in the September quarter, up 46% on ₹63.6 cr a year ago. A new record, beating Q1's ₹86.9 cr.
Q2 FY27 operating profit	₹27.9 cr · 30.0% margin	EBITDA, up 49%. ₹30 of every ₹100 of sales is operating profit, very high for a manufacturer, and slightly up on Q1's 29.6%.
Q2 FY27 net profit	₹21.6 cr	Up 56% from ₹13.8 cr. Profit is still growing faster than sales.
H1 FY27	₹180 cr / ₹41 cr	Half-year sales up 47%, profit up 61%. The first half alone is three-quarters of FY26's whole-year profit of ₹55 cr.
Borrowings	Nil	Still no debt. Growth is paid for from its own cash.
Price-to-earnings (P/E)	~115x (our calc.)	About ₹115 for every ₹1 of yearly consolidated profit (roughly ₹71 cr over the last four quarters). Screener shows 238x because it uses the smaller standalone company. Either way it's very expensive.

2. Coverage

No concall transcripts were available on Screener. This report is based on a global web deep-dive. Raghav doesn't hold a Q&A earnings call. Its Screener "concall" entries are yearly investor slide decks, and the scraper found no transcripts this run either.

Period / source	Date	Read?
FY22 → FY26 investor decks and results	Jul 2022 → Apr 2026	Carried forward from the Q4-2026 and Q1-2027 reports
Q1 FY27 results + investor update (prior boundary)	16 Jul 2026	Carried forward from the Q1-2027 report
Joint venture with TRL Krosaki (board approval, press release)	4-8 Sep 2026	Newly read in full ★
Q2 / H1 FY27 results and company update	16 Oct 2026	Newly read in full ★

Sources this quarter: the company's Q2 results release as reported by Free Press Journal and Sahi; JV announcement coverage (The Machine Maker, UNI/PR Newswire, Sahi, DSIJ); Screener.in financials. Media figures were checked against each other. The Q2 tonnage wasn't in any source we found.

★ Latest update highlights: Q2 FY27 results (16 Oct 2026)

- **Another record quarter.** Revenue ₹92.8 cr (+46%), operating profit ₹27.9 cr (+49%), net profit ₹21.6 cr (+56%). Margin edged up to 30%. Q1 wasn't a one-off.
- **Plants are full.** Capacity use was 95% (company figure), up from our ~94% estimate for Q1. Growth now depends on the new lines.
- **Expansion slipped by words, not yet by date.** The 414,000 → 534,000 tonnes a year expansion is now "on schedule for Q3 FY27". Earlier it was "October 2026". Q3 includes October, so it's not a miss yet, but as of mid-October it wasn't running.
- **A big new step: Odisha JV.** In September Raghav signed an 80:20 joint venture with TRL Krosaki Refractories for a 350,000-tonne plant in Jharsuguda, Odisha, costing about ₹100 cr. Krosaki brings long-term quartzite from its own mines. No start date given in anything we read.
- **New products, finally named.** The company says the share of new products is rising and named Tundish FerroShield, an in-house R&D product being cross-sold to existing customers. Still no revenue figure.

Business mix & capacity. Domestic vs export split for Q2 wasn't disclosed. The last full figure (FY26) was about 24% exported by volume to 39 countries, so roughly three-quarters is sold in India. The company now says it sells in 28 Indian states and over 39 countries. Capacity use is 95% on 414,000 tonnes, so there's almost no room left until the 120,000-tonne add switches on in Q3 FY27. The Odisha JV would add 350,000 tonnes on top, taking group nameplate close to 900,000 tonnes once built, near the "1 million tonnes" ambition.

★ Since our last report

Builds on the Q1-2027 report (boundary: Q1 FY27 results, 16 Jul 2026). Prior verdicts: **Durable trigger: YES** · **Management consistent: YES**.

Prior read	What we said then	What the new quarter shows	Movement
Trigger: YES	Volume-plus-price flywheel; Q1 +49% sales	Q2 +46% sales, +56% profit, margin 30%	Confirmed
Consistency: YES	A decade of doing what the slides said	No target dropped; capex wording moved from "October" to "Q3"	Confirmed
534k tonnes by Oct 2026	On track, ~₹20 cr	"On schedule for Q3 FY27"; not live at results date	On-track (watch)
1 million tonnes, undated	Flagged as an easy-to-say number	Odisha JV gives it a real, funded first step	Improving
Value-add products	Three years, no revenue	Tundish FerroShield named; "share rising"; still no number	Improving (slightly)
Working capital stretch	Inventory days rising	No half-year cash data in sources read	Unknown

Verdict change this quarter: both unchanged at YES. The JV turns the vague 1-million-tonne line into a plan with a partner and a budget, which answers last quarter's main worry. The new caution is the expansion date wording and a share price that's run far ahead of profits.

★ 3. Earning-trigger thesis

The engine is the same: add cheap capacity next to existing plants, fill it by taking share from small unbranded local makers, and charge more for a lining that lasts longer. Q2 is the second record quarter in a row at about a 30% margin. The near-term catalyst is the 120,000-tonne add due this quarter into plants that are 95% full. The longer catalyst is the Odisha JV, which puts a plant right in the eastern steel belt with its own raw material. Underneath all of it, induction-furnace steelmaking keeps gaining share in India, and every furnace keeps buying linings.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Capacity 414k → 534k tonnes	~₹20 cr brownfield, Q3 FY27	Plants at 95%; past adds filled fast	Q3 FY27	Strong	unchanged; date wording loosened
Odisha JV, 350k tonnes	80:20 with TRL Krosaki, ~₹100 cr	Signed and incorporated; captive quartzite	Undated	Moderate	new
Premium pricing	Raise realisation every year	Margin 30% while sales grew 46%	Ongoing	Strong	unchanged
Market share	From ~14% toward 30%	Growth far ahead of steel output	Multi-year	Strong	unchanged
New products	Value-add silica, foundry, Tundish FerroShield	Named product, cross-selling; no revenue disclosed	2-4 years	Unproven	↑ slightly

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 deck	New line to double capacity cheaply	288k → 414k tonnes by FY25	Delivered
Every deck	Keep taking share with a premium product	3.5% (FY16) → ~14% (FY26); H1 FY27 sales +47%	Delivered
Every deck	Better margin every year	23% (FY21) → 29% (FY26) → 30% (Q2 FY27)	Delivered
Apr 2026	534k tonnes by October 2026	Restated as "Q3 FY27"; not live by 16 Oct	Too early
Apr 2026	Exports back to normal from April	Q1 export volumes +34%; no Q2 split given	Delivered
FY24 onward	Value-add products	First named product gaining; still no revenue figure	Slipping, less so
Jul 2026	1 million tonnes, 30% share (undated)	Odisha JV signed two months later	Too early, credible step

Narrative drift. None worth worrying about. The September JV is a bigger move than anything in the last few years, but it's the same product, the same customers and a cheaper raw-material source, so it's the old story at larger scale, not a new one. The limit is the same as before: there's no Q&A call, so nobody presses management on the expansion date, the JV timeline, working capital or the new-product numbers. This verdict is graded on written statements against reported numbers.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: unchanged

The second record quarter in a row backs up the flywheel. Sales rose 46% and profit 56% at a 30% margin, and the plants are 95% full with a 29% capacity add due this quarter. The Odisha JV adds a second, much larger leg with its own quartzite supply. What would weaken it: the new lines slipping past December, or the margin falling as extra capacity forces it to chase volume. Separately, at around 115x consolidated earnings the market has priced in a lot of this already.

Management consistent? → YES vs last quarter: unchanged

The record still matches the slides. Capacity gets built, margins rise, share climbs and the balance sheet stays debt-free. Last quarter's worry was a big, undated 1-million-tonne line, and management backed it within two months with a signed, funded JV. The two small marks against them: the expansion date moved from "October" to "Q3 FY27", and value-add products still have no revenue number after three years. With no Q&A call, this YES rests on an easier test than most companies face.

Sources: Raghav Productivity Enhancers Q2/H1 FY27 results release (16 Oct 2026) as reported by Free Press Journal and Sahi; TRL Krosaki JV announcement (Sep 2026) as reported by The Machine Maker and UNI / PR Newswire; Q1 FY27 results and earlier decks carried forward from the Q4-2026 and Q1-2027 editions of this tracker; Screener.in standalone financials and market data. The ~115x P/E is our own calculation from consolidated profits; Screener's figure is standalone. This is not investment advice. Do your own due diligence.
